Plan Revised April 2024

REGIONAL HAZARDOUS MATERIALS EMERGENCY PREPAREDNESS PLAN

Updated April 2024

This plan serves the Kansas Counties of Johnson, Leavenworth and Wyandotte, and the incorporated cities within these counties that comprise the Kansas Mid-America Local Emergency Planning Committee (LEPC).

This plan serves the Missouri Counties of Cass, Clay, Jackson, Platte, Ray, and the incorporated cities within these counties that comprise the Missouri Region A Urban Local Emergency Planning District (LEPD).

Prepared for:

The Regional Hazardous Materials and Emergency Preparedness Alliance

600 Broadway, Suite 200 Kansas City, MO 64105-1659

Foreword and Letter of Promulgation

To: All Agencies and Readers

The purpose of this Regional Hazardous Materials Emergency Preparedness Plan (RHMEPP) is to coordinate planning and response actions among stakeholders within the Kansas Mid-America Local Emergency Planning Committee (LEPC) and the Missouri Region A Urban Local Emergency Planning District (LEPD). In a collaborative effort, these organizations established the Mid-America Hazardous Materials (Hazmat) Emergency Preparedness Alliance (HEPA) to ensure ongoing cooperation in hazmat planning and response activities.

The RHMEPP provides an administrative framework for hazmat planning and response in the jurisdictions served by the Kansas Mid-America LEPC and the Missouri Region A Urban LEPD. Through Mid-America HEPA, the LEPC and LEPD strive to implement a Whole Community approach as promoted by the National Preparedness Goal, by working with private industry and the public safety community on behalf of our citizens, businesses, and visitors. Member organizations of Mid-America HEPA coordinate with federal agencies, as well as state, county, and local governments in both Kansas and Missouri. Toward these ends, this plan has three primary audiences: (1) emergency response agencies with roles in preparedness and response to a hazmat incident; (2) local industries that manufacture, use, store, and/or transport hazmat; and (3) the public.

The RHMEPP is not intended to be an operational document although some portions of the plan convey information valuable for development of operational plans. Rather, it provides an administrative framework and guidance to assist emergency response agencies, local governments, and the private sector in understanding concepts underlying the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) as authorized by Title III of the Superfund Amendment Reauthorization Act (SARA) and provisions for planning for hazmat emergencies. The document serves as an emergency planning tool to facilitate effective, coordinated, multi-jurisdictional response by all personnel during a hazmat emergency. The plan also describes the roles of government and private industry to inform citizens of the inherent risks posed by hazmat present in their communities, as well as proactive steps they can take that may protect themselves, their families, and their communities.

The RHMEPP outlines actions to be taken by private industry, local governments, and other participating organizations that will: (1) identify and communicate risks to communities of a hazardous substance release, (2) coordinate response efforts of local jurisdictions, (3) describe response capabilities, and (4) maximize the effectiveness of response organizations comprising the Missouri Region A Urban LEPD and Kansas Mid-America LEPC. Local emergency operation plans should be updated to reflect LEPC/LEPD administrative functions and planning guidance resources. Additionally, local jurisdictions should identify roles and responsibilities of the LEPC/LEPD within their respective local emergency operations plans (LEOP).

While this plan focuses on hazmat emergencies, it may be useful in other all-hazards emergency preparedness activities. Hazmat is present in every jurisdiction within the Mid-America HEPA Region—on our highways and rail lines, in our airports and shipping ports, in businesses and industry, and in our homes. Consequently, incidents involving floods, fires, or tornadoes are also likely to include hazmat. Additionally, while this document is not intended to address acts of terrorism involving weapons of mass

destruction, information contained herein may be useful to support preparedness, prevention, and protection efforts regarding these types of incidents.

Local jurisdictions are required to maintain a LEOP that includes a hazmat annex. This plan is regional in scope and offers guidance on planning and response to hazmat incidents in the eight-county area served by Mid-America HEPA. However, the RHMEPP can support development of LEOPs and response procedures as a resource to facilitate the planning process. The plan informs emergency response agencies, local governments, and the private sector about hazmat planning efforts regarding mitigation, preparedness, response, and recovery activities. Local jurisdictions may elect to adopt this plan, in whole or part, to augment LEOPs. The RHMEPP embraces the concepts of the National Preparedness System and the National Incident Management System (NIMS).

Authorities for this document are set forth by the Kansas Administrative Regulations (KAR) 28.65.1 to 28.65.4, Kansas Statutes Annotated (KSA) Chapter 48, Article 9, Executive Reorganization Order No. 29, and KSA Sections 65.5703-5705 and 057-0021-K and in Missouri by SARA Title III; Division 10, Chapter 11, *Missouri Code of State Regulations, Revised Statutes of Missouri*, Sections 292.600 to 292.625.

This plan will undergo annual review and update as warranted by Mid-America HEPA. This document supersedes all previous versions issued by the Mid-America LEPC. Mid-America HEPA welcomes your comments for improving this plan. Please direct comments and suggestions to Mid-America HEPA care of MARC Emergency Services, 600 Broadway, Suite 200, Kansas City, Missouri 64105-1554, or via e-mail to mcheney@marc.org.

Sincerely,

Scott Casey

Record of Amendments

Table 1: Record of Amendments

Change Number	Change Description	Section Number	Change Date
1	Replaced Mid-America Local Emergency Planning Committee (LEPC) with Missouri Region A Urban Local Emergency Planning District (LEPD) and Kansas Mid-America LEPC	Global	September 2021
2	Updated LEPC and LEPD leadership	Cover, pg. v	September 2021
3	Linked Table of Contents to document headings, tables, and figures	Pgs. vi-ix	September 2021
4	Updated Record of Amendments	Pg. x	September 2021
5	Added subsection describing organizational structure of Mid-America Hazmat Emergency Preparedness Alliance (HEPA)	Pg. xi	September 2021
6	Updated all figures/maps and data in existing tables	Global	September 2021
7	Updated tables listing hazardous materials (hazmat) incidents and chemical facilities; removed Toxic Release Inventory (TRI) tables and figure; added new tables of extremely hazardous substances (EHS) facilities; and added section describing Trends in Hazmat Transportation	Sections 2.1 and 2.2	September 2021
8	Added table of airports storing bulk quantities of aviation fuel and tables of hazmat transported via waterway	Sections 2.2.6 and 2.2.7	September 2021
9	Added regional and county statistics for vulnerable populations and associated figures/maps	Section 2.3 and Appendix C	September 2021
10	Updated spill reporting flowchart to include transportation incidents	Section 3.7.2	September 2021
11	Added links to MARC's Tier II web map application	Sections 2.2., 4.1.1, 5.4.2, and Appendix B	September 2021
12	Updated list of hospitals with decontamination capabilities and specialized burn patient care/units	Section 5.5.1	September 2021
13	Added 2021 Kansas hazmat/oil spill statute	Section 5.5.3	September 2021
14	Updated references to county-level hazard mitigation plans	Section 5.6	September 2021
15	Updated Stakeholder Contact Information Lists; added links to pipeline operator profiles; and added list of Frequently Called Numbers for local, state, and federal agencies	Appendix A	September 2021
16	Updated county maps of vulnerable populations/locations	Appendix C	September 2021
17	Updated Kansas Tier II Reporting Forms and process	Appendix D	September 2021

Change Number	Change Description	Section Number	Change Date
18	Updated Spill Notification Forms; tables of spill reporting processes; and contact information for reporting chemical and petroleum spills in Kansas and Missouri	Appendix G	September 2021
19	Added Acronyms List	Appendix J	September 2021
20	Updated LEPC/LEPD Chairs	Cover & Figure 1	July 2023
21	Added Melinda Cheney as MARC Emergency Services contact	Pgs. iii, v, 5, 50, and D-5	July 2023
22	Updated Record of Amendments	Pg. x	July 2023
23	Added <i>Kansas Statutes Annotated</i> (KSA) 65-171(v) regarding State's authorities	Section 1.7	July 2023
24	Updated footnotes	Global	July 2023
25	Updated all tables except Tables 6, 7, 8, 9, and 17 (national hazmat transport statistics); Table 16 (road classes by mile); and Tables 18 and 19 (vulnerable populations) because more current data were not available (Tables 39 -43 not updated)	Global	July 2023
26	Updated all figures/maps depicting hazmat sources (i.e., pipelines, facilities, railroads) and/or vulnerable populations	Global	July 2023
27	Updated hyperlinks throughout plan	Global	July 2023
28	Added language describing decrease in hazmat spills/releases during pandemic	Section 2.1	July 2023
29	Updated Risk Management Plan (RMP) language based on changes outlined in RMP Reconsideration Rule	Section 2.2.1.4	July 2023
30	Update Class I railroad criteria and added merger of railroads to form Canadian Pacific Kansas City Limited Railway	Section 2.2.4	July 2023
31	Update count of intermodal and transloading facilities in Kansas and Missouri; and changed name of "Neff Yard" to "Kansas City Intermodal Facility"	Section 2.2.5.3, Table 12	July 2023
32	Added information about pending expansion of the Port of Kansas City	Section 2.2.7	July 2023
33	Updated MARC's Custodian of Records	Section 3.4	July 2023
34	Changed acronym for Missouri Department of Natural Resources (MoDNR)	Global	July 2023
35	Updated points of contact (not included in tables) for numerous agencies	Global	July 2023
36	Expanded list of private sector hazmat/oil resources and updated capability descriptions of contractors	Appendix H, Table H-50	July 2023
37	Revised second (additional) Appendix H (Hazmat Response Resource Guide) and moved to Appendix J	Appendix J	July 2023
38	Updated Acronyms List	Appendix K	July 2023
39	Updated Plan Revision date to April 2024	Cover Page, Title Page	April 2024
40	Updated relevant Authorities (MO) to reflect Division 10, Chapter 11, Missouri Code of State Regulations	Letter of Promulgation, Section 1.7	April 2024
41	Included Appendices in overall page numbering (removed reference to A, B, C, etc.)	Global	April 2024

Change Number	Change Description	Section Number	Change Date
42	Updated formatting to ensure consistent numbering for Figures and Tables, as well as alignment to page.	Global	April 2024
43	Added “above threshold quantities” to Tier II Hazardous Chemicals Facilities reporting requirement.	Section 2.2.1.1	April 2024
44	Added “materials containing” to description of content in Tables 4 & 5, as well as providing clarification in table notes.	Section 2.2.1.5	April 2024
45	Removed reference to Region 7 as it relates to RMP Facility Chemicals, County Totals.	Section 2.2.1.5	April 2024
46	Updated data contained in Missouri River Hazmat Transports and Trends, Omaha to Kansas City table to reflect 2017 and 2021 shipments.	Section 2.2.7	April 2024
47	Updated data contained in Missouri River Hazmat Transports and Trends, Kansas City to St. Louis table to reflect 2017 and 2021 shipments.	Section 2.2.7	April 2024
48	Clarified language related to delegation of hazmat emergency planning information availability under EPCRA.	Section 3.1	April 2024
49	Clarified reporting requirements for accidental releases under EPCRA 304.	Section 3.1.3	April 2024
50	Added “above threshold quantities” to EPCRA 311 and 312.	Section 3.1.4	April 2024
51	Added “confidential” to Tier II chemical information reported.	Section 3.3.1	April 2024
52	Added “LEPD” as a holder of hazmat information.	Section 3.4	April 2024
53	Added website to the hazmat information request process.	Section 3.4	April 2024
54	Added “Toxic Release Inventory” to section title and subsequent explanation.	Section 3.5.1	April 2024
55	Added (RSMo Ch. 44.080) to Missouri authority and responsibility.	Section 3.6.2	April 2024
56	Added URL for “Missouri All-Hazard Emergency Planning Guidance.”	Section 3.6.2	April 2024
57	Added URL for EPCRA requirements.	Section 3.7	April 2024
58	Revised “EPCRA Major Information Flow/Requirements for Hazmat Facilities” graphic.	Section 3.7	April 2024
59	Added “Extremely Hazardous Substance” and “Threshold Planning Quantity” to section explanation.	Section 3.7.1.1	April 2024
60	Changed “should” to “must” as it relates to the completion of a Tier II form.	Section 3.7.1.1	April 2024
61	Relocated the Tier II submittal process to Section 3.7.1.3	Section 3.7.1.1	April 2024
62	Changed “should” to “must” as it relates to the completion of a Tier II form.	Section 3.7.1.2	April 2024
63	Added language related to the “Optional Distribution” provided by MERC.	Section 3.7.1.3	April 2024
64	Added reference to the EPA’s online IRI reporting form along with the URL.	Section 3.7.1.4	April 2024
65	Added “Extremely Hazardous Substance” and “Threshold Planning Quantity” to section explanation.	Section 3.7.2	April 2024
66	Changed “should” to “must” as it relates to the completion of a Tier II form.	Section 3.7.2	April 2024
67	Added “CERCLA” as it relates to reportable quantities (RQ).	Section 3.7.2	April 2024

Change Number	Change Description	Section Number	Change Date
68	Revised “CERCLA and EPCRA Release Reporting Chart” graphic.	Section 3.7.2	April 2024
69	Updated timeline for notification to the NRC under CERCLA to “immediate.”	Section 3.7.2.1	April 2024
70	Included additional requirements for reporting to the NRC under CERCLA.	Section 3.7.2.1	April 2024
71	Included additional requirement for reporting to the SERC and LEPC under EPCRA.	Section 3.7.2.2	April 2024
72	Added narrative to describe the spill notification process in Kansas.	Section 3.7.2.2	April 2024
73	Added a bullet point related to encouraging regionalized SOPs/SOGs for local fire departments.	Section 4.1.2	April 2024
74	Removed “posted” as it relates to SDS requirement.	Section 4.1.3	April 2024
75	Added footnote related to KSA 65-171(v).	Section 5.5.3.1	April 2024
76	Added reference to the use of WEA for targeted dissemination of information.	Section 7.2.3	April 2024
77	Added county indicator rows to several large tables for consistency with county-specific data tables.	Table 23, 24, 40, 41, 42	April 2024
78	Reformatted all tables for consistency (e.g., column width, alignment, appearance).	Global	April 2024
79	Removed “Chemical Manufacturers Association” to reflect a change in the organization’s name.	Table 39	April 2024
80	Removed reference to PCBs as it relates to FIFRA Region 7.	Table 39	April 2024
81	Added subcategories for statute type.	Appendix B	April 2024
82	Updated title to “Mutual Aid Agreements.”	Appendix B	April 2024
83	Updated reference to more recent version of the Missouri State Hazard Mitigation Plan.	Appendix B	April 2024
84	Added references related to Kansas.	Appendix B	April 2024
85	Updated email information and other references to online availability of resources and information.	Appendix D	April 2024
86	Added detail regarding reporting requirements for fuel in underground storage tanks.	Appendix D	April 2024
87	Updated penalty amount, along with the addition of the legal reference.	Appendix D	April 2024
88	Modified Protective Action Checklist content to reflect a bulleted list of important information.	Appendix F	April 2024
89	Updated phone number for Missouri Public Service Commission	Table 46	April 2024
90	Removed all references to “on the next page,” “below,” etc., as they relate to the location of tables or figures.	Global	April 2024
91	Relocated “Meteorological Considerations” to a higher priority.	Appendix F	April 2024
92	Updated title and data for Regional Road Classes by Mile table.	Table 17	April 2024

Change Number	Change Description	Section Number	Change Date
93	Updated Figures with new GIS maps	Figures 5, 6, 7, 10, 11, 16, 17, 18, 20, 21, 22, 23, 24, 25	April 2024
94	Added Population Vulnerability GIS Maps (Independence, MO and KCMO)	Figures 19, 20	April 2024
95	Non-Fire-Based EMS agencies have been broken out into a separate table; Fire and Law Enforcement Contact Information updated.	Tables 40-42	April 2024
96	Clarified the scope of the MARC Planning Area	Appendix H	April 2024
97	Updated the name of Truman Medical Center and Lakewood medical Center to University Health Truman Medical Center and University Health Lakewood Medical Center.	Section 5.5.1	April 2024
98	Updated addresses for Jackson County and Platte County Health Departments.	Table 45	April 2024
99	Updated Regional Hospital Command Center (HCC) Response Plan to MARC Health Care Coalition Response Plan.	Table 53 (Emergency Pre-Hospital Care)	April 2024
100	Updated Vulnerable Populations (Individual Characteristics and Household Characteristics) to reflect 2022 ACS 5-Year Data from the US Census Bureau.	Tables 19-20	April 2024
101	Updated Missouri Co-Chair to Scott Munk, Bayer Crop Science (replacing Jason Bonney, Central Jackson County FPD)	Cover Page	April 2024

Distribution List

This plan is made available to the following organizations within eight Kansas and Missouri counties served by the Mid-America Hazmat Emergency Preparedness Alliance (HEPA):

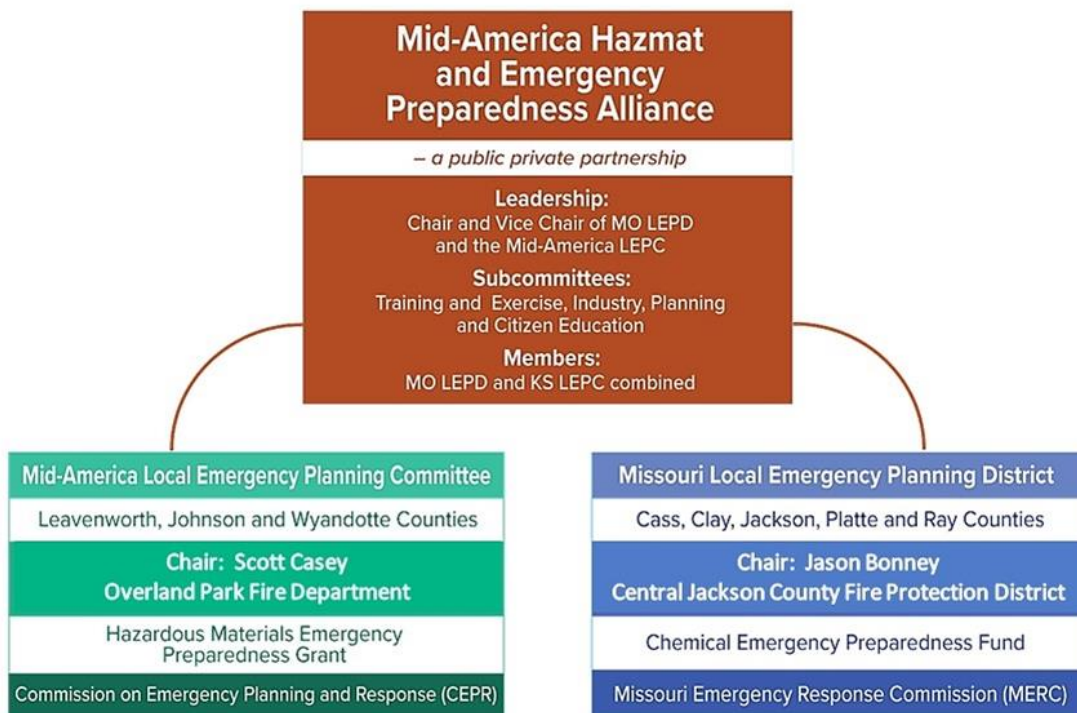

- Law Enforcement Agencies
- Fire Departments and Districts
- Emergency Management Agencies
- Emergency Medical and Healthcare Agencies
- Local, State, and Federal Government Entities
- Human Services and other Voluntary Agencies
- Tier II and Risk Management Program Facilities

See **Appendix A** for a full list of all the agencies and regulated facilities.

Mid-America HEPA Organization

Development of the Regional Hazardous Materials Emergency Preparedness Plan (RHMEPP) is coordinate among stakeholders within the Missouri Region A Urban Local Emergency Planning District (LEPD) and Kansas Mid-America Local Emergency Planning Committee (LEPC). In a collaborative effort, these organizations established Mid-America HEPA to ensure ongoing cooperation in hazmat planning and response activities. Figure 1 depicts the organization of Mid-America HEPA and lists key leadership positions.

Figure 1: Mid-America HEPA Organization

BASE PLAN

1. Introduction

1.1 PURPOSE

The purpose of this plan is to identify the policies and procedures for select stakeholders served by Mid-America Hazmat Emergency Preparedness Alliance (HEPA) for the management of hazardous materials (hazmat) incidents. This plan is intended to prepare local governments, private industry, and public safety agencies operating within the Mid-America HEPA's area to respond to and minimize negative impacts of a hazmat release on human health and the environment.

1.2 OBJECTIVES

This plan achieves the following objectives:

- Meets federal and state requirements for establishment of policies and procedures regarding local hazmat incident notification, response, coordination, and other elements.
- Provides information about hazmat to various audiences to promote understanding of risk and reduce impacts of hazmat incidents within Mid-America HEPA's planning area.
- Identifies key stakeholders and interagency relationships necessary to achieve a coordinated response to a hazmat incident within Mid-America HEPA's planning area.
- Provides guidance for public access to community right-to-know information in accord with the Emergency Planning and Community Right-To-Know Act of 1986 (EPCRA).
- Helps local jurisdictions meet requirements for emergency hazmat planning pursuant to state and federal laws. Local jurisdictions are encouraged to build upon planning information conveyed herein to better prepare their respective communities.

1.3 DATA ASSUMPTIONS AND DISCLAIMER

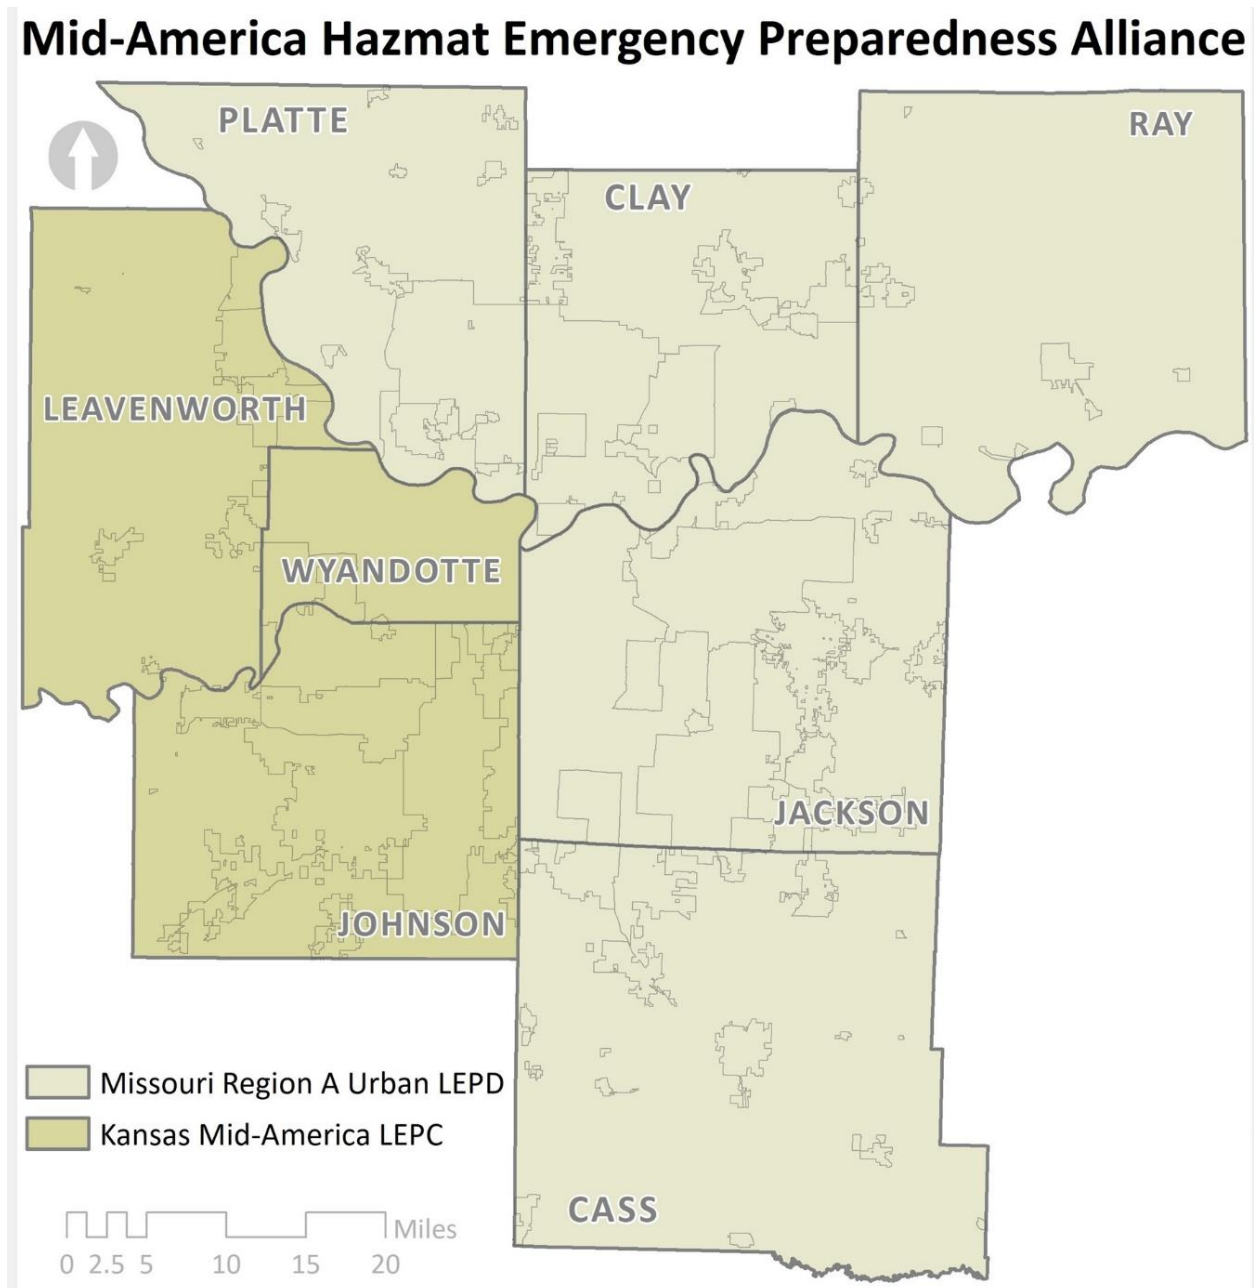

Timely and accurate submission of large quantities of data is critical to ongoing maintenance of this plan. All information furnished by state and federal agencies was accepted as factual, and the limited confirmation activities that ensued did not refute this assumption. Similarly, information provided by representatives of local agencies and organizations was assumed accurate and current to the date designated by representatives for this information. Thus, Mid-America Regional Council (MARC) makes no representations or warranties regarding the accuracy of data or maps. MARC shall not be liable under any circumstances for any direct, special, incidental, or consequential damages with respect to claims by any user or third party on account of or arising from the use of data or maps.

1.4 SCOPE

Authorized by Title III of the Superfund Amendments and Reauthorization Act (SARA), EPCRA requires each state to administer a State Emergency Response Commission (SERC). The Missouri Emergency Response Commission (MERC) and Kansas Commission on Emergency Planning and Response (CEPR) serve as the SERC in each state, respectively.

A regional local emergency planning area also exists that includes local jurisdictions within both Missouri and Kansas to maximize planning resources and address hazmat threats and incidents affecting the entire Mid-America HEPA planning region. Mid-America HEPA consists of the Missouri Region A Urban Local Emergency Planning District (LEPD) and Kansas Mid-America Local Emergency Planning Committee (LEPC). The Missouri Region A Urban LEPD includes representatives from Cass, Clay, Jackson, Platte, and Ray Counties. The Kansas Mid-America LEPC includes representatives from Johnson, Leavenworth, and Wyandotte Counties. Figure 2 shows the jurisdictions served by Mid-America HEPA.

Figure 2: Jurisdictions Served by Mid-America HEPA

EPCRA requires that Mid-America HEPA jurisdictions submit a plan that meets requirements of United States Code (USC) Title 42 Chapter 116 Subchapter 1 – Emergency Planning and Notification § 11003 (a)-(g). As per § 11003 (c), the plan shall include:

- (1) Identification of facilities subject to the requirements of this subchapter that are within the emergency planning district, identification of routes likely to be used for transport of substances on the list of extremely hazardous substances (EHS), and identification of additional facilities contributing or subjected to additional risk due to their proximity to facilities subject to the requirements of this subchapter, such as hospitals or natural gas facilities.
- (2) Methods and procedures to be followed by facility owners and operators, as well as local emergency and medical personnel, to respond to any release of such substances.
- (3) Designation of a community emergency coordinator and facility emergency coordinators, who shall make determinations necessary to implement the plan.
- (4) Procedures for facility emergency coordinators and the community emergency coordinator to provide reliable, effective, and timely notification of a release to persons designated in the emergency plan, and to the public.
- (5) Methods for determining occurrence of a release, and the area or population likely to be affected by the release.
- (6) A description of emergency equipment and facilities in the community and at each facility in the community subject to the requirements of this subchapter, and identification of persons responsible for such equipment and facilities.
- (7) Evacuation plans, including provisions for a precautionary evacuation and alternative traffic routes.
- (8) Training programs, including schedules for training of local emergency response and medical personnel.
- (9) Methods and schedules for exercising the emergency plan.

EPCRA also stipulates operational, membership, governance, and reporting requirements for LEPCs.¹

¹ U.S. Government Publishing Office (Ed.). (2011). *United States Code* (USC) Title 42, Chapter 116 Emergency Planning and Community Right to Know. Retrieved June 21, 2023, from <https://www.govinfo.gov/content/pkg/USCODE-2011-title42/html/USCODE-2011-title42-chap116.htm>

1.5 PLAN ORGANIZATION

This plan consists of a Base Plan and multiple Appendices. The intended Base Plan audience consists of government officials, emergency response agency leadership and personnel, and critical industry partners. The plan describes the hazmat present in the LEPC and LEPD planning areas, and contains supporting documents that explain how the LEPC/LEPD developed guidance and how that guidance should be integrated into local plans, including:

- Overall guide for hazmat emergency management activities for jurisdictions within the Mid-America LEPC.
- Policies and regulations that govern hazmat releases and responsibilities for emergency response functions.
- Capacities of local hazmat response teams and processes to coordinate them.
- Supporting documentation.

The plan's Appendices provide additional details regarding components of the plan. Metadata for the associated graphics in this plan are accessible to readers via MARC's Geographic Information Systems (GIS) SharePoint site. For access, contact MARC at 816-701-8320 or mcheney@marc.org.

1.6 INTEGRATION WITH OTHER PLANS

1.6.1 Regional Coordination Guide

The Kansas City Metropolitan Area Regional Coordination Guide (RCG) is an all-hazards, capabilities-based guide designed to address hazards potentially affecting the Kansas City metropolitan area. The RCG provides tools such as initial response checklists that may be helpful during an emergency. RHMEPP content has been cross referenced with the RCG to ensure accuracy of complementary information.

The RCG includes an Emergency Support Function (ESF) #10 Oil and Hazardous Materials Annex to the RCG that addresses local and regional hazmat plans, regionally available hazmat resources and specially trained personnel, state and federal specialized resources and personnel, and regional coordination and information sharing activities to be accomplished in a hazmat incident. The RCG and ESF #10 Annex furnish coordination guidance to stakeholders and are not designed as full operational plans.

1.6.2 Local Emergency Plans

Underlying all hazmat emergency response activities in the Mid-America HEPA planning area are the emergency operations plans developed by each local jurisdiction and emergency services agency.

The RHMEPP does not supersede other emergency plans but provides guidance from a regional perspective to stakeholder organizations that can be used during emergency planning efforts. This plan does not replace or substitute local emergency operations plans (LEOP). Operational guidance for incident response appears primarily in LEOPs.

1.7 LEGAL AUTHORITIES

This plan accords with the following relevant federal, state, and local regulations:

- *Kansas Administrative Regulations* (KAR) 28.65.1-28.65.4
- Kansas Executive Reorganization Order No. 29
- *Kansas Statutes Annotated* (KSA) Chapter 48, Article 9
- KSA Sections 65.5703-5705, 65-171(v), and 057-0021-K
- *Missouri Code of State Regulations*, Division 100, Chapter 11
- *Missouri Revised Statutes*, Sections 292.600-292.625
- SARA Title III of 1986 – EPCRA, Title 42 Chapter 116 Subchapter 1 – Emergency Planning and Notification § 11003 (a-g).

A comprehensive and detailed listing of legal authorities is available for reference in **Appendix B**.

2. Situation

2.1 HAZARDOUS MATERIAL RELEASE INCIDENTS

2.1.1 National Response Center

The National Response Center (NRC) is the federal point of contact designated for reporting all oil, chemical, radiological, biological, and etiological discharges into the environment, anywhere in the United States and its territories. It serves as an emergency call center that fields initial reports for pollution and forwards that information to appropriate state and federal agencies for response. The NRC accepts and documents reported releases of hazardous substances and petroleum discharges regardless of the quantity reported. Consequently, some NRC incident reports involve releases/discharges in quantities below the threshold reporting requirement for a particular hazmat.

Table 2 lists all hazmat incidents reported to the NRC from January 1, 2018, through May 19, 2023— including incidents involving spills/releases that may be below threshold reporting requirements.

Table 2: Number of Incidents by County (2018-2023)

Incident Type	Kansas			Missouri				
	Johnson	Leavenworth	Wyandotte	Cass	Clay	Jackson	Platte	Ray
Fixed Facility	41	5	19	6	27	43	7	1
Mobile	25	1	10	2	2	13	2	1
Aircraft	1	-	-	-	-	-	3	-
Pipeline	2	2	-	1	1	8	2	-
Railroad	1	3	19	2	23	17	-	-
Railroad Non-Accident Release	18	1	20	2	9	38	8	4
Storage Tank	6	-	6	1	6	14	-	1
Vessel	-	-	-	-	1	1	-	-
Unknown Sheen	2	-	1	-	1	4	1	-
Totals	183 Incidents			252 Incidents				

Note: National Response Center data retrieved on May 24, 2023, from <https://nrc.uscg.mil/>.

Of the 435 incidents listed in Table 1, 321 incidents (74 percent) reported to NRC involved U.S. Department of Transportation (USDOT) Hazard Class 3 materials (flammable/combustible liquids) including transformer oil, lubricants, crude oil, jet fuel, gasoline, and diesel fuel. About 6 percent involved sulfuric acid and other Hazard Class 8 corrosive materials. Non-flammable and non-toxic gases also comprised 8 percent of incidents occurring during the reporting period. The remaining 12 percent of reported spills/releases involved a variety of hazmats including Hazard Class 5 (oxidizers) and Hazard Class 9 (miscellaneous) materials. Notably, eleven hazmat incidents reported to NRC involved releases of Hazard Class 2.3 (toxic gases) materials. Designated EHSs under EPCRA and toxic inhalation hazards (TIH) by USDOT, the following Hazard Class 2.3 releases occurred over the reporting period: anhydrous ammonia (5), ethylene oxide (2), sulfur dioxide (1), and chlorine (3).

Of the 435 known hazmat incidents in MARC’s planning area during the reporting period, 252 occurred in Missouri counties and 183 were reported in Kansas. In terms of incident type, the largest proportion of incidents in the combined planning area occurred at fixed facilities, with 149 incidents (34.3 percent)

reported spills/releases. Non-accident railroad releases (NARR) ranked second with one hundred incidents (23.0 percent). This type of incident includes any spill/release occurring while a hazmat is in a railroad's possession and not caused by a derailment or other rail-related accident. Typically, NARRs occur during loading/unloading activities. Rail and over-the-road (OTR) transport incidents accounted for 14.9 and 12.9 percent of spills/releases in the region, respectfully. Notably, most hazmat incidents reported by railroads involved small oil/fuel releases in/near rail yards from machinery and OTR vehicles. Storage tank incidents, although occurring at facilities and tracked separately by the NRC, accounted for 7.8 percent (34 spills) of incidents in the planning area. A significant but lesser number of pipeline incidents (16 spills) accounted for 3.7 percent of hazmat incidents. Notably, 50 percent of all reported pipeline releases in the region occurred in Jackson County. With a combined six incidents reported, aircraft and vessel-related spills/releases accounted for less than 1.5 percent of all incidents reported to the NRC over the reporting period.

Comparing hazmat incidents across two overlapping reporting periods—2016 to 2021 and 2018 to 2023—total numbers of incidents and incident locations were extremely consistent between these timeframes. However, significant variations were observed in 2020 and 2021 when much of the U.S. economy had slowed due to the Coronavirus pandemic. Review of NRC data indicates a combined 33 percent reduction in hazmat/oil releases in Leavenworth County, Kansas and Cass, Clay, and Jackson Counties in Missouri in these years, when compared to the preceding two-year period (2018-2019). Numbers of reported hazmat incidents remained constant in other counties within the planning area during the height of the pandemic.

2.2 REGIONAL HAZMAT FACILITIES

For planning purposes, regional hazmat facilities addressed by the RHEMPP include certain regulated facilities that use/store hazmat, including EHSs. An interactive web map application showing locations of hazmat facilities (i.e., Non-EHS Tier II, EHS-Tier II) is available on the [MARC website](#). Contact information pertaining to these facilities is in **Appendix A**.

2.2.1 Facilities

The Mid-America HEPA planning area is home to a variety of facilities housing numerous chemicals. Based on the type of chemical and quantity, facilities using/storing hazmat are subject to different federal reporting requirements which are summarized as follows:

2.2.1.1 Tier II Hazardous Chemicals Facilities

Any substance for which a facility must keep a Safety Data Sheet (SDS) under the Occupational Safety and Health Administration's (OSHA) Hazard Communication Standard is classified as a "hazardous chemical." Facilities that use/store one or more "hazardous chemicals" above threshold quantities must submit a Tier II reporting form. A partial list of hazardous chemicals is accessible at various EPA websites.²

² EPA, Consolidated List of Lists under EPCRA/CERCLA/CAA §112(r) December 2022). Retrieved June 20, 2023, from https://www.epa.gov/system/files/documents/2022-12/List_of_Lists_Compiled_December%2022.pdf.

2.2.1.2 Tier II Extremely Hazardous Substances Facilities

Within the consolidated list of hazardous chemicals, U.S. Environmental Protection Agency (EPA) designates certain chemicals as EHSs with threshold planning quantities (TPQ) and reportable quantities (RQ) assigned for each substance. The Consolidated List of Chemicals Subject to EPCRA and Section 112(r) of the Clean Air Act (CAA) (also known as the List of Lists) was prepared to help facility representatives determine EPCRA reporting requirements for specific chemicals and what reports to submit. EPA's "List of Lists" should be used as a reference tool, not as a definitive source of compliance information. Compliance information for EPCRA is published in the *Code of Federal Regulations (CFR)*, 40 CFR Parts 302, 355, and 372.

2.2.1.3 Risk Management Program Facilities

Section 112 (r) of the CAA established Risk Management Plan (RMP) requirements for facilities processing or manufacturing one or more of 140 acutely toxic substances, flammable gases, and volatile liquids at certain threshold quantities. Under these requirements, industry must prevent accidents, operate safely, and manage hazardous chemicals in a safe and responsible way through hazard assessments, prevention programs, and emergency response programs. These programs are summarized in the facility's RMP, to be submitted to EPA for review on a five-year schedule.

2.2.1.4 Final RMP Reconsideration Rule (2019)

On December 19, 2019, the EPA Administrator signed the RMP Reconsideration final rule, which modifies the existing rule to remove amendments while maintaining appropriate protections and ensuring first responders have access to all the necessary safety information. While regulated facilities are required to coordinate with local emergency response agencies to determine how hazmat sources are addressed in local emergency response plans, the RMP Reconsideration final rule implements the following changes:

- Rescinds all major accident prevention program provisions of the RMP Amendments rule (i.e., third party audits, safer technology and alternatives analyses, incident investigation root cause analysis), and most other minor changes to the prevention program.
- Rescinds the public information availability provisions of the RMP Amendments rule.
- Modifies the emergency coordination provisions to address security concerns with the Amendments rule coordination provisions.
- Modifies the exercise provisions to give more flexibility to regulated facilities and local emergency responders in complying with these provisions.
- Modifies some compliance dates to provide necessary time for program changes.

2.2.1.5 Regional Hazmat Risk Summary

For this plan update, Tier II and RMP data were obtained and reviewed to characterize the types and quantities of hazmat used/stored at various facilities throughout the region. Tier II facility data for the 2022 reporting period were obtained from Kansas Department of Health and Environment (KDHE) and Missouri Emergency Response Commission (MERC) in 2023. The number of EHS facilities in Kansas increased by seventy-six, while the number of EHS facilities in Missouri decreased by three. Non-EHS

facilities in Missouri increased by 157, while the number of non-EHS facilities decreased in Kansas by fifty-six. RMP facility data were accessed via EPA’s Facility Registry System (FRS) on May 18, 2023, and describe chemical facility inventories to this date. Table 3 lists Tier II facilities that use/store one or more EHSs, Tier II facilities housing no EHS (Non-EHS facilities), and RMP chemical facilities.

Table 3: Number of Hazmat Facilities by County

County	EHS Tier II Facilities (2022)	Non-EHS Tier II Facilities (2022)	RMP Facilities (2023)
Cass (MO)	23	94	6
Clay (MO)	61	159	3
Jackson (MO)	185	420	16
Platte (MO)	29	79	4
Ray (MO)	6	37	4
Missouri Totals	304	789	33
Johnson (KS)	118	274	15
Leavenworth (KS)	12	72	3
Wyandotte (KS)	76	121	10
Kansas Totals	206	467	28
Regional Totals	510	1,256	61

Notes:

- EHS Extremely hazardous substance
- RMP Risk Management Plan

See **Appendix C** for additional hazard information and population vulnerability maps. Tables 4 and 5 list Tier II EHS facilities within Mid-America HEPA’s planning area that reported maximum daily amounts of materials containing EHS exceeding 5,000 pounds during the 2022 reporting period.

EPCRA mandates that facilities report EHS used/stored in the previous year leading up to the annual reporting deadline. Based on Tier II data provided to MERC by facility representatives up to May 26, 2023, facilities in the Missouri Region A Urban LEPD collectively possess forty-five unique EHSs. Of the 304 Tier II EHS facilities in the LEPD, 266 facilities reported use/storage of EHS only as electrolyte in lead-acid batteries. Based on limited risks posed by use and storage of lead-acid batteries, Table 4 lists 38 Tier II EHS facilities that reported maximum daily amounts of materials containing EHS—other than lead-acid batteries—exceeding 5,000 pounds during the 2022 reporting period.

Table 4: MO Region A Urban LEPD Facilities Reporting Maximum Daily EHS Over 5,000 Pounds

Facility Name	City / Town	EHS Name	Max. Daily Amount (lb)*	Avg. Daily Amount (lb)*	Physical State					Primary Hazards

Notes:

Collectively, facilities reported sulfuric acid electrolyte in batteries at a daily average amount of 2,939,600 lbs., and maximum amount of 4,873,703 lbs. Facilities reporting only this EHS are included in **Appendix A**.

Max. Daily Amount (lb) and Avg. Daily Amount (lb) represent the materials containing the EHS, not the EHS itself.

EHS Extremely hazardous substance

lb Pounds

LEPD Local Emergency Planning District

MO Missouri

Tier II data provided to KDHE by facility representatives up to May 26, 2023, indicate that facilities in the Kansas Mid-America LEPC collectively possess twelve unique EHS chemicals. Of the 268 Tier II EHS facilities in the LEPC, 105 facilities reported use/storage of EHS only as electrolyte in lead-acid batteries. Based on limited risks posed by use and storage of lead-acid batteries, this plan focuses on facilities that possess other types of EHS. Consequently, Table 5 lists 53 Tier II EHS facilities that reported maximum daily amounts of EHS—other than lead-acid batteries—exceeding 5,000 pounds during the 2022 reporting period.

Table 5: Kansas Mid-America LEPC Facilities Reporting Maximum Daily EHS Over 5,000 Pounds

Comparing RMP reporting periods for facilities operating in the planning area, fifty facilities met RMP reporting requirements for the program in 2021. In 2023, 53 facilities were required to file RMPs with the EPA. While the number of RMP facilities increased by three in the planning area during this period,

the number of reportable chemicals remained level at 15 hazmats. Notably, the overall quantity of hazmat in RMP inventories increased from 8,479 tons to 10,194 tons—a 17 percent increase over the 2021 total quantity. A complete listing of RMP facilities with contact information is in **Appendix A**. Figure 4 illustrates locations of 53 RMP facilities operating within the Mid-America HEPA planning area.

Figure 4: RMP Facilities in Mid-America HEPA's Planning Area

An interactive web map application showing locations of hazmat facilities (Non-EHS Tier II, EHS-Tier II, and RMP) is available on the [MARC website](#).³ This application provides additional information about each hazmat facility, as well as fire districts that depict the primary fire department designated to respond to each hazmat facility.

2.2.2 Trends in Hazmat Transportation

Every 5 years, USDOT’s Bureau of Transportation Statistics (BTS) publishes a comprehensive collection of national and state-level transport data regarding domestic freight shipments. In July 2020, USDOT published results of the national 2017 U.S. Hazardous Materials Commodity Flow Survey. Results of the national survey examining 2017 data indicate that the quantity of hazmats shipped in the United States via various modes had increased by 15 percent since 2012. Conversely, BTS data indicate that the value of transported hazmats had decreased by 28 percent over the same period. The decrease was due to transports of low-value, high-weight commodities growing at a faster rate than high-value, low-weight hazmat commodities during the 5-year period. The report also notes a significant increase in OTR hazmat shipments (18.5 percent) and dramatic growth in multi-mode transports (187.5 percent). Table 7⁴ lists values and quantities of hazmat shipments by mode of transport in the United States during 2012 and 2017.

Table 7: Trend in Value and Weight of Hazmat Shipments by Mode (U.S.)

Mode of Transport	Value (millions of dollars)			Tons (thousands)		
	2017	2012	Percent Change	2017	2012	Percent Change
Truck	1,091,250	1,466,021	-25.6	1,814,848	1,531,405	18.5
Rail	39,040	79,222	-50.7	90,387	110,988	-18.6
Water	137,109	217,816	-37.1	304,189	283,561	7.3
Air and Truck	4,817	4,380	10	251	261	-3.9
Pipeline	339,912	537,304	-36.7	679,846	626,652	8.5
Multiple Modes	68,101	29,682	129.4	78,444	27,285	187.5
Total	1,680,231	2,334,425	-28.0	2,967,965	2,580,153	15

Source: U.S. Department of Transportation, Bureau of Transportation Statistics, U.S. Department of Commerce, Census Bureau, 2017 Commodity Flow Survey (Published July 2020)

Three billion tons of hazmat were shipped in 2017 across all modes of transport. According to related data published by USDOT in 2020, Kansas ranked 16th in the United States for inbound hazmat commodities among all states and across all modes of transport. Hazmat shipments inbound to/through Kansas accounted for about 1.7 percent of all hazmat traffic in the United States. In Missouri, hazmat comprised about 1.4 percent (by weight) of all commodity transports. States with multiple ports and

16. Kansas	29,877	49,910	5,599	S
23. Missouri	20,562	31,105	3,560	167
U.S. Totals	1,680,231	2,967,965	382,472	189

Notes: S Withheld because estimate did not meet publication standards.

Ton-miles estimates are based on estimated distances traveled along a modeled transportation network.

Source: U.S. Department of Transportation, Bureau of Transportation Statistics, U.S. Department of Commerce, Census Bureau, 2017 Commodity Flow Survey (Published July 2020)

In 2017, Kansas ranked 15th in the United States for outbound hazmat shipments originating from within the State. That year, outbound hazmat shipments from Kansas to other states included 25.4 million tons of chemicals and 5.3 million tons of petroleum-based fuels. Missouri ranked 25th for outbound shipments of similar hazmats. Table 9⁶ lists state rankings for outbound hazmat shipments across all modes of transport.

Table 9: Top-Ranked States for Outbound Hazmat Shipments – 2017 (U.S.)

State Ranking	Value (\$ millions)	Tons (thousands)	Ton-miles (millions)	Average Miles per Shipment
1. Texas	522,044	991,307	116,635	85
2. Louisiana	132,292	272,493	63,022	124
3. California	124,115	185,201	13,752	301
4. Illinois	106,163	177,294	17,676	96
15. Kansas	29,748	47,313	2,683	S
25. Missouri	17,172	20,768	1,519	112
U.S. Totals	931,534	1,694,376	215,287	718

Notes:

S Withheld because estimate did not meet publication standards.

⁵ A Commodity Flow Study was performed in 2022 by the US Department of Transportation (USDOT); this data is anticipated to be released in May 2025.

⁶ A Commodity Flow Study was performed in 2022 by the US Department of Transportation (USDOT); this data is anticipated to be released in May 2025.

In terms of intra-state transports, the top hazmats shipped within Kansas in 2017 were gasoline (12.4 million tons) and fuel oils (11.0 million tons). Within Missouri, top shipments also involved various Hazard Class 3 materials, including gasoline (11.5 million tons) and fuel oils (9.2 million tons). Nationally, Hazard Class 3 (flammable and combustible liquids) materials such as these accounted for over 83 percent (by weight) of hazmat shipments in 2017. Table 10⁷ lists types of hazmats shipped throughout the nation in 2017 by USDOT hazard class with relative values and weights.

Table 10: Trend in Hazmat Shipments by Hazard Class (U.S.)

Hazard Class and Description	Percent of Total Value		Percent of Total Tonnage		Ton-miles	
	2017	2012	2017	2012	2017	2012
Class 1, Explosives	0.9	0.8	0.1	0.2	0.3	0.3
Class 2, Compressed Gases	6.8	5.4	7.7	6.4	7.6	10.8
Class 3, Flammable and combustible liquids	81.8	86.4	83.1	85.4	70.5	66.5
Class 4, Flammable solids; spontaneously combustible; and dangerous when wet materials	0.3	0.2	1.0	0.4	2.0	1.9
Class 5, Oxidizers and organic peroxides	0.6	0.3	0.5	0.5	1.5	1.8
Class 6, Toxic materials and infectious substances	0.8	0.7	.02	0.3	1.0	1.2
Class 7, Radioactive material	0.4	0.5	Z	S	Z	Z
Class 8, Corrosive material	4.7	3.2	5.1	4.9	11.9	12.3
Class 9, Miscellaneous hazardous materials	3.7	2.5	2.3	2.0	5.2	5.2
Totals	100.0	100.0	100.0	100.0	100.0	100.0

Continuing a 20-year trend, Pipeline and Hazardous Materials Safety Administration (PHMSA) data indicate that Hazard Class 2 and 3 materials accounted for more than 90 percent of the value of all hazmats transported in the United States in 2017, a slight increase over 2012 levels. Notably, estimates of number of miles traveled per ton of Class 3 materials decreased 16 percent, a notable change due to spikes in domestic oil production that began in 2011 but then dropped in 2017.

Hazmat Transport Risk: The U.S. hazmat transport system is multi-faceted and complex. Most hazmat shipments involve a chain of events and multiple players (e.g., shippers, carriers, packaging manufacturers, distributors, freight forwarders, consignees [receivers of shipment], government regulators, etc.) having distinct roles in the process of moving hazmats from origins to destinations. Multiple handoffs of a material from one party to another often occur during transport. The various parties range from individuals to small firms to the largest multinational organizations. Moreover, many materials pose a variety of hazards, such as flammability, corrosiveness, reactivity, and toxicity.

To assess and manage risk associated with the nation’s hazmat transport system, PHMSA’s Office of Hazardous Material Safety collects and publishes spill and accident data. Table 11 summarizes negative

⁷ A Commodity Flow Study was performed in 2022 by the US Department of Transportation (USDOT); this data is anticipated to be released in May 2025.

impacts of hazmat incidents documented by PHMSA in 2022. Because a single incident often results in multiple impacts, incident totals are not additive.

Table 11: Hazmat Incident Summary by Result – 2022 (U.S., MO, and KS)

Result of Incident	Incidents	Hospitalized	Non-Hospitalized	Fatalities	Damages
Environmental Damage	20	0	1	0	\$3,794,577
Explosion	5	0	0	2	\$139,525
Fire Involved	44	1	2	1	\$734,760
Entry to Waterway/Sewer	13	0	1	0	\$10,488,058
None	1,060	0	4	0	\$1,238,860
Other	9	0	0	0	\$20,528
Spillage	24,027	5	14	1	\$42,617,695
Vapor (Gas) Dispersion	145	2	4	0	\$2,019,968
U.S. Totals	23,323	8	26	4	\$61,053,971
Missouri Total (All Counties)	697		0	0	\$433,292
Kansas Total (All Counties)	511	0	3	0	\$270,577

2.2.3 Pipeline

Eight companies operate refined petroleum product pipelines within the MARC planning area. Additionally, all pipeline sub-systems in the region are part of larger interstate pipeline systems serving multiple states. Commodities transported include crude oil, liquified petroleum gas (LPG), natural gas liquid (NGL), and product (PRD). PRD pipelines are most prevalent in the region, with four companies operating fifteen sub-system lines. PRD encompasses several subcategories of petroleum products; therefore, these lines may be used to transport a variety of petroleum commodities, including but not limited to ethanol-blended gasoline, gasoline, fuel oil, diesel, kerosene, jet fuel, and biofuels. LPG, also known as bottled gas and tank gas, is a mixture of propane, normal butane, and isobutane. Similar to LPG, NGL contains all the components of LPG plus some fraction of longer-chain hydrocarbons (e.g., pentane and hexane). Using PHMSA naming conventions, “Empty liquid” pipelines are inactive liquid petroleum lines that have not been abandoned or formally decommissioned by their owner. No other hazmats (i.e., anhydrous ammonia) are transported via pipeline through/within the planning area.

Review of regional sub-systems indicate that pipeline diameters range between eight inches (Sinclair PRD line running east/west in Johnson and Jackson Counties) to thirty-six inches for Enbridge’s crude oil pipeline passing through the southeast portion of Cass County. Figure 5 depicts locations of liquid petroleum pipelines in the planning area. Notably, four pipeline rights-of-way (ROW) shown on Figure 5 as a single line are shared ROWs that contain two or more liquid petroleum pipelines.

Figure 5: Liquid Petroleum Pipelines

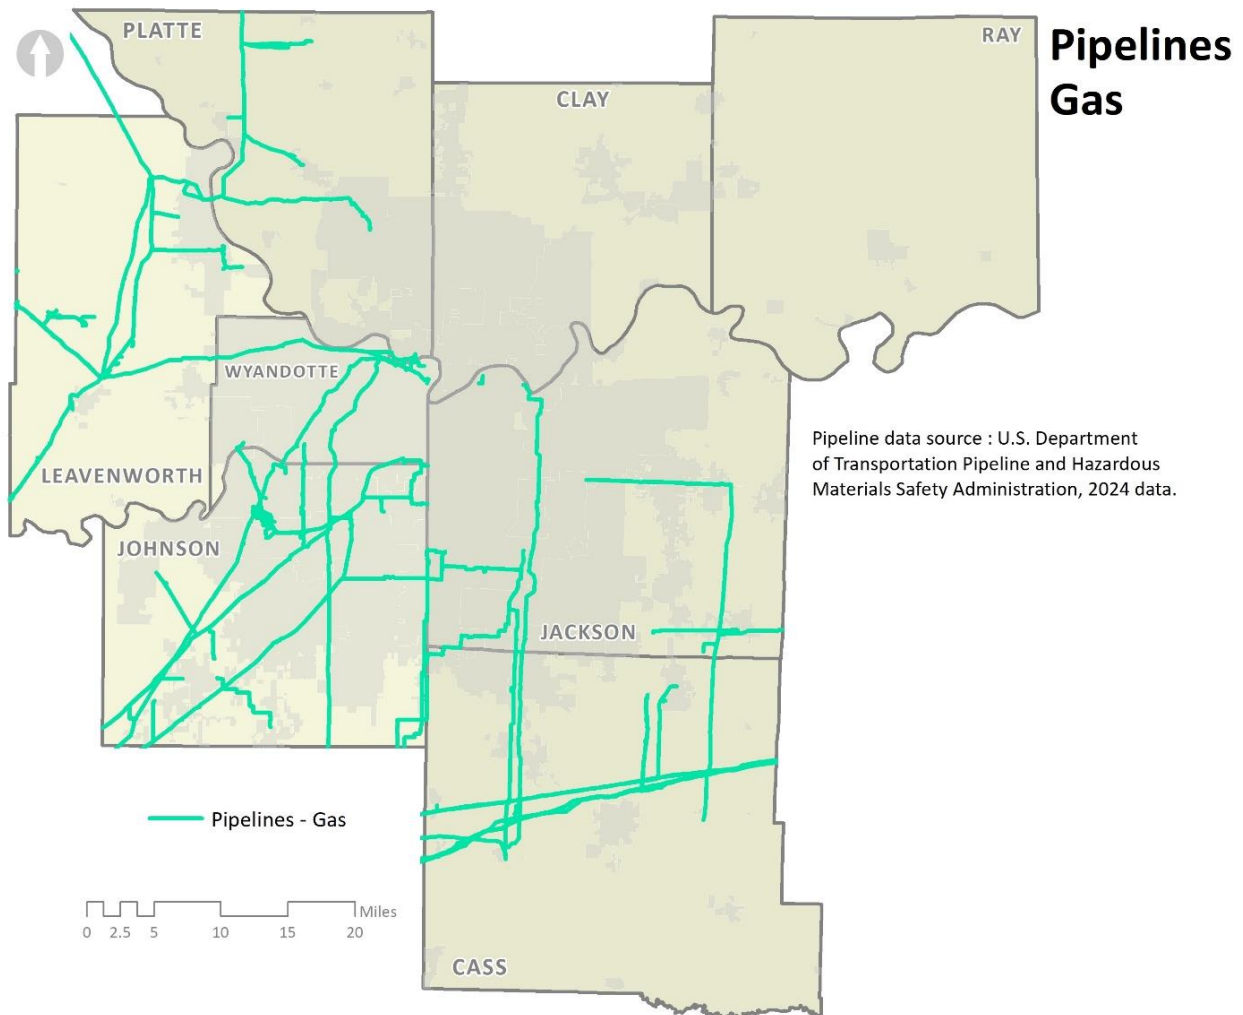

Note: Pipeline contact information and operator profiles are accessible in Appendix A.

Twelve pipeline operators transport natural gas (NG) through/within the Mid-America HEPA planning area. NG systems throughout the region consist of large-diameter (24-inch) transmission lines that span multiple states, and smaller (6-inch) distribution lines that often lie entirely within one county. Southern Star Central Gas Pipeline Company and Spire (formerly Missouri Gas Energy) are the primary transporters of NG in the region, serving residential and business customers in each county within the planning area.

KPC Pipeline operates a 1,000-mile interstate NG pipeline that transports natural gas from Oklahoma and Kansas to metropolitan Kansas City and various interconnecting markets, including Platte, Johnson, and Wyandotte Counties. The Panhandle Eastern Pipeline Company operates an NG transmission line running

from the panhandle region of Oklahoma east through Cass County and onto to Indiana and Ohio where it supplies large markets. Several local systems within Johnson County are owned/operated by City of Gardner, private facilities (i.e., Danisco USA, Inc.), and solid waste landfill that produces NG for sale into the interstate system. Notably, two small-diameter lines originating from NG production wells in eastern Jefferson County feed Southern Star’s Tonganoxie Station in Leavenworth County. Figure 6 depicts locations of NG transmission lines and distribution lines throughout the Mid-America HEPA planning area.

Figure 6: Natural Gas Pipelines

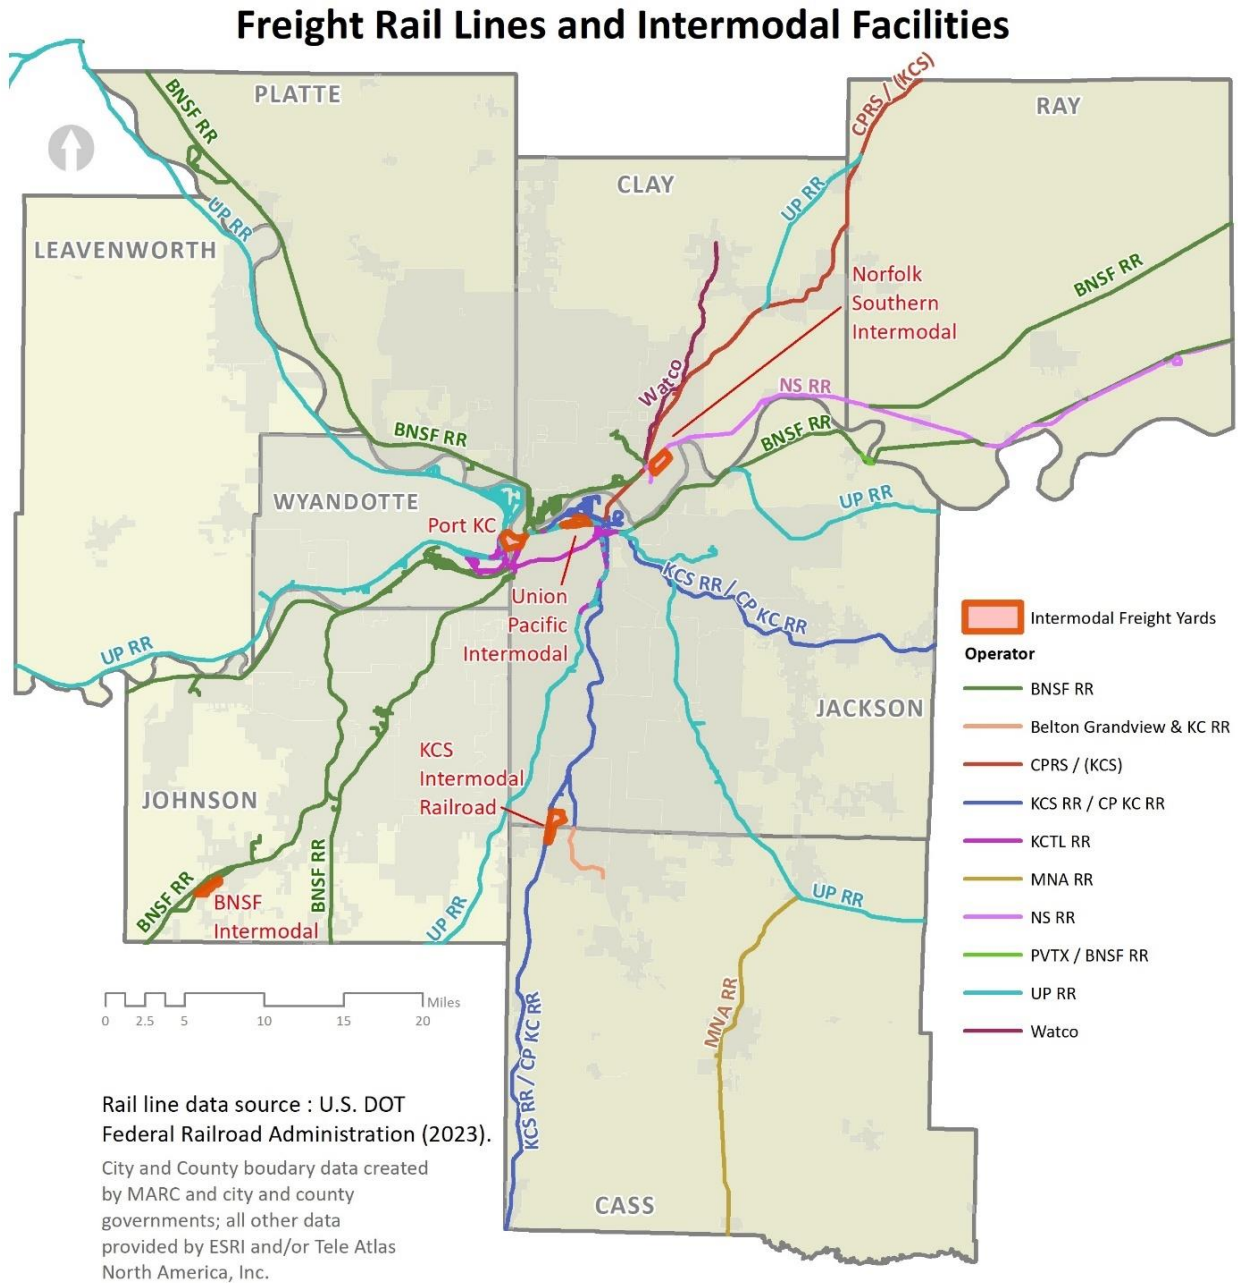

Note: Pipeline contact information and operator profiles are accessible in Appendix A.

2.2.4 Rail

The Association of American Railroads (AAR) cites Kansas City as the second largest rail center in the nation in terms of freight tonnage transported through/within the metropolitan area. Four of the nation's six Class I railroads operate freight lines within the Mid-America HEPA planning area: Burlington Northern / Santa Fe Railway (BNSF), Union Pacific Railroad (UP), Norfolk Southern Railway (NS), and Canadian Pacific Kansas City Limited Railway (CPKC) resulting from the merger of two Class I railroads operating in the region. As of 2021, AAR defined Class I railroads as those with operating revenues at or exceeding \$900 million annually. Measured in tons hauled per mile, Class I carriers were responsible for an estimated 95 percent of all chemical and petroleum products shipped via rail in the United States in 2022. Figure 7 shows freight railroads and intermodal facilities operating in the MARC planning area.

Figure 7: Freight Railroads and Intermodal Facilities

Note: Contact information for rail operators and intermodal facilities is in Appendix A.

Two regional railroads also operate in the planning area: Missouri & Northern Arkansas Railroad (M&NA) and Kaw River Railroad. AAR defines regional railroads as non-Class I railroads with 2021 annual revenues of at least \$40 million, or that operate at least 350 miles of track. Additionally, the

metropolitan area is home to freight terminal railroad operators such as Kansas City Terminal Railway (KCT) that perform switching services for the larger operators. Several short line rail companies, sometimes called Class III railroads, also operate throughout the area. As the name suggests, these operators move freight shorter distances on track owned by other operators.

BNSF’s Transcontinental Route and UP’s East-West Coal Route are the two most significant rail routes for hazmat transports through/within the MARC planning area. BNSF’s transcontinental route connects ports in California with rail yards and intermodal terminals in/around Chicago, Illinois. The route runs southwest-northeast through the region. Also extending from California to Illinois, UP’s east-west route passes through Leavenworth, Johnson, and Wyandotte Counties, as well as Jackson and Cass Counties in Missouri. Both transcontinental routes include multiple lines, known as subdivisions, that support 80-90 trains per day.

National-level data indicate that hazmat transports via rail decreased 18.6 percent (by weight) from 2012 to 2017. However, the 2017 Missouri State Freight Plan forecasts an 11.2 percent overall increase in rail shipments by 2030. Data presented in the 2022 Kansas Rail Plan indicate that the share of total goods moved by rail is projected to decrease in coming years, although the absolute volume of rail transports in Kansas is projected to increase by 1.6 percent and the value of rail transports will increase by 49 percent during this time. Rail forecasts specific to hazmat shipments are not published by either state; however, USDOT annually lists historical data describing general commodity shipments via rail. Table 12 lists the top-10 commodities shipped within/through Kansas in 2022 and Missouri in 2021.

Table 12: Top-10 Commodities Transported by Rail (2021/2022)

Missouri (2021)			Kansas (2022)		
Commodity	Tons (thousands)	Percent of Total	Commodity	Tons (thousands)	Percent of Total
Gravel	76,108	20.70%	Coal	122,876	35.44%
Cereal grains	43,877	11.90%	Mixed freight	54,634	15.76%
Logs	35,367	9.60%	Cereal grains	32,067	9.25%
Non-metal min. prods.	29,927	8.10%	Waste and Scrap	31,944	9.21%
Coal	22,208	6.00%	Other chemical products	28,568	8.24%
Other ag prods.	16,161	4.40%	Gravel/Crushed Stone	27,922	8.07%
Other foodstuffs	15,570	4.20%	Fertilizers	25,100	7.24%
Natural sands	15,020	4.10%	Transport equipment	18,233	5.26%
Animal feed	13,643	3.70%	Milled grains	17,919	5.17%
Mixed freight	11,704	3.20%	Animal feed	15,394	4.44%

Notes:

Source: U.S. Department of Transportation, Bureau of Transportation Statistics, Freight Facts and Figures (2022) (<https://www.bts.gov/browse-statistical-products-and-data/state-transportation-statistics/freight-flows-state>)

Commodity weight in tons is inclusive of in-bound and out-bound shipments in each state.

2.2.5 Intermodal Facilities

Intermodal transportation refers to shipping containers that are transferred between two or more modes of transportation. For example, a container may be moved from a truck to rail, then back to a truck, without any handling of the freight itself.

2.2.5.1 Intermodal/Intermediate Bulk Containers

Intermediate bulk containers (IBC) and ton containers are cylindrical in shape with rounded heads welded to the cylinder. They range in liquid capacity from 180 to 320 gallons. Tank test pressures range from 500 to 1,000 pounds per square inch gauge (psig). When shipped by rail, ton containers are carried on special flat cars, boxcars, and in gondola cars. Fittings are at the head of the IBC, including fusible plugs and/or spring-loaded safety relief valves. Safety relief devices are prohibited on IBCs carrying certain toxic and corrosive materials. Ton containers are used to transport a variety of hazmats, including Hazard Class 2.3 (toxic gases) materials such as chlorine.

2.2.5.2 Intermodal Tank Containers

Intermodal tank containers (IM) consist of a single metal tank mounted inside a sturdy metal supporting frame. This unique frame structure enables use of the container in two or more modes of transport such as rail, OTR, and water vessel. Most IMs are built as a cylinder enclosed at each end by a head. Tank capacities are less than 6,340 gallons (about 24,000 liters). Other tank shapes and configurations exist but are rare, as are tanks with multiple compartments. Over 90 percent of IMs in service in the United States are low-pressure tanks. Less common high-pressure IMs, known as SPEC 51 and SPEC 51L, are designed to withstand pressures ranging from 100 to 500 psig. These tanks transport gases liquefied under pressure, including LPG and anhydrous ammonia.

2.2.5.3 Bulk Containers at Fixed Sites

Most of the intermodal facilities (about 70 percent) in Kansas and Missouri accommodate transfers of commodities between rail and trucks. In 2022, USDOT's BTS identified forty-two intermodal and transloading facilities in Missouri and eighteen in Kansas where products are transferred between rail and other modes. Most, if not all, intermodal facilities are associated with private companies and offered as a service to customers. Table 13 lists intermodal terminals operating within the Mid-America HEPA planning area. Each is operated by a Class I railroad.

Table 13: Class I Railroad Intermodal Facilities

Intermodal Railroad Terminals	Street	City	State	Zip
Burlington Northern/Sante Fe Railway – Kansas City Logistics Park	34500 W 199 th St	Edgerton	KS	66201
CSX Transportation – Kansas City	3001 Easy 150 Hwy	Kansas City	MO	64147
Canadia Pacific Kansas City Limited Railway	3301 East 147 th St	Kansas City	MO	64147
Norfolk Southern Railway – Voltz Yard	4800 N. Kimball Dr	Kansas City	MO	64161
Union Pacific Railroad – Kansas City	4801 Gardner Ave	Kansas City	MO	64120

Note: Contact information for intermodal facilities is in Appendix A.

2.2.6 Air

In Kansas and Missouri, numerous airports support diverse types of air cargo operations, including scheduled operations that integrate multiple carriers and ad-hoc charter operations that transport small volume of air cargo. Kansas City International Airport (MCI) represents the planning area’s largest market and highest-volume shipper of air cargo. While no bulk shipments of hazmat—as defined by USDOT—by air cargo carriers are known to occur at the region’s airports, many airports store significant quantities of aviation fuel in aboveground and belowground tanks. Figure 8 illustrates aircraft landing facilities in the MARC planning area. Companion Table 14 lists airports reporting on-site bulk storage of aviation fuel.

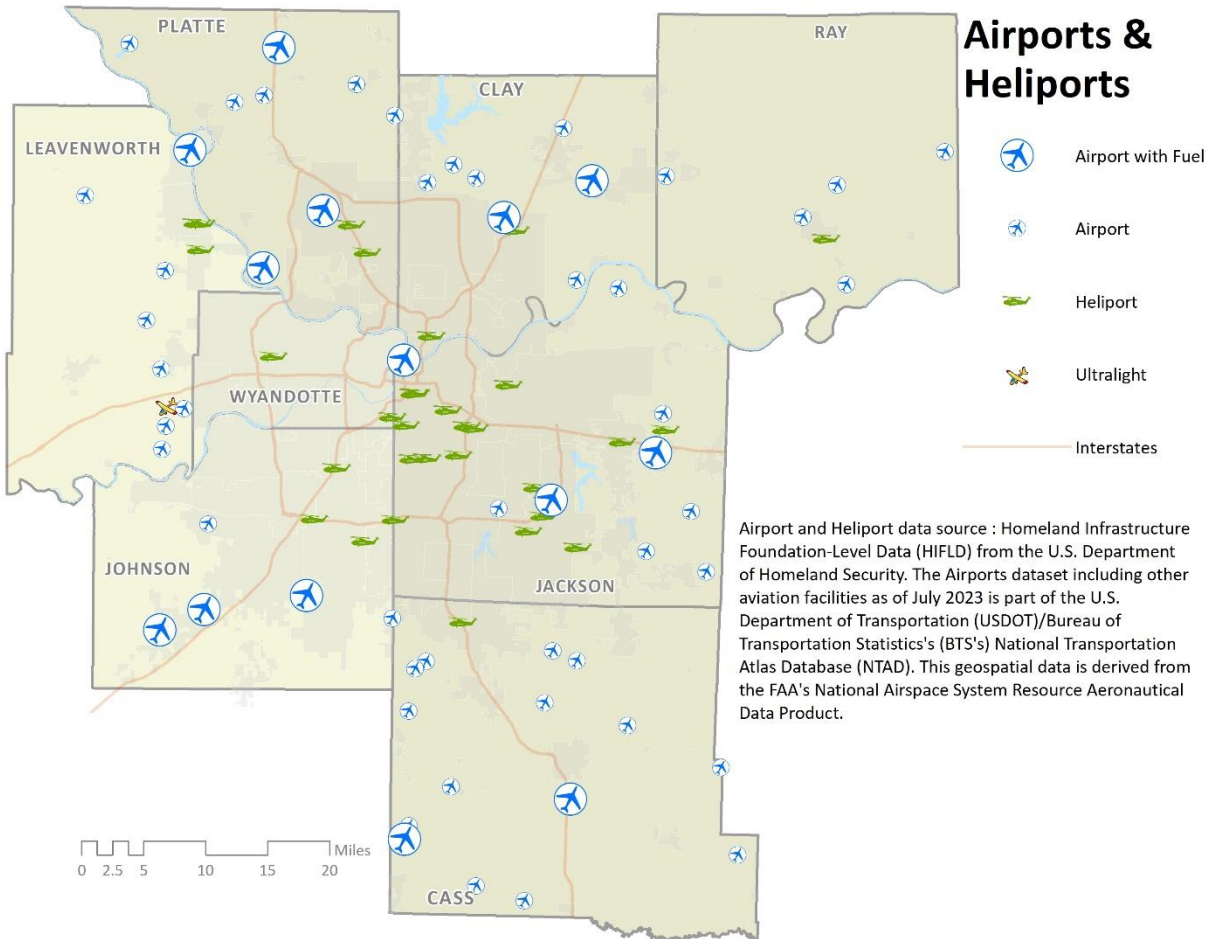

Table 14: Airports Storing Aviation Fuel

Airport Name	Airport ID	County / City	Type
Clay Center Municipal Airport	CYW	Johnson / Clay Center	Public
Sherman Army Air Force Base	FLV	Johnson / Fort Leavenworth	Public/Military
Gardner Municipal Airport	K34	Johnson / Gardner	Public
New Century Air Center	IXD	Leavenworth / Olathe	Public
Johnson County Executive Airport	OJC	Leavenworth / Olathe	Public
East Kansas City	3GV	Cass / Grain Valley	Public
Lawrence Smith Memorial	LRY	Cass / Harrisonville	Public
Charles B Wheeler Downtown	MKC	Cass / Kansas City	Public
Lee’s Summit Municipal Airport	LXT	Clay / Lee’s Summit	Public
Roosterville	ONO	Clay / Liberty	Public
Midwest National Air Center	GPH	Jackson / Mosby	Public
Kansas City International Airport	MCI	Platte / Kansas City	Public
Skyhaven Airport	RCM	Jackson / Warrensburg	Public

Source: U.S. Department of Homeland Security, Homeland Infrastructure Foundation Level Database (2023).

Note: No heliports within the planning area reported storage of bulk quantities of aviation fuel.

Figure 8: Aircraft Landing Locations

Note: A complete listing of aircraft landing facilities, with and without aviation fuel, is in Appendix A.

2.2.7 Waterway

Located at the confluence of the Missouri and Kansas Rivers at Missouri River Mile 367.1, the Port of Kansas City is part of an urban complex that includes Kansas City, Kansas, and Kansas City, Missouri, as well as several smaller municipalities in the surrounding area. The Port of Kansas City encompasses 145 acres available for industrial or retail development, serving as one of the largest storage and distribution centers on the Missouri River. The Port of Kansas City is a true intermodal facility, where commodities are transferred between barge, truck, and rail with UP providing rail terminal services. Commodities most frequently passing through the port include fertilizer, grain, corn, meal, bark, salt, rolled and coiled

steel, and petroleum coke. Using \$9.88 million in USDOT grant funds and additional private financing, construction to expand the port is scheduled to commence in Fall 2023.

While information regarding types and numbers of hazmat shipments directly managed by Port of Kansas City is not available, U.S. Army Corps of Engineers (USACE) Institute for Water Resources provides information annually regarding bulk commodity shipments on inland waterways. Tables 15 and 16 list hazmat transports, and mixed-commodity transports containing hazmat, along the Missouri River leading to/from the Port of Kansas City:

Table 15: Missouri River Hazmat Transports and Trends, Omaha to Kansas City

Omaha to Kansas City Missouri River Segment	2017 Shipments (Thousand US tons)	2021 Shipments (Thousand US tons)	Percent Change
Crude Petroleum	0	0	-
Asphalt, Tar, and Pitch	0	17,180	-
Nitrogenous Fertilizer	0	13,860	-
Phosphatic Fertilizer	0	10,377	-
Potassic Fertilizer	0	8,859	-
Fertilizer and Mixes N.E.C.	0	36,418	-
Total Hazmat Transported	-	86,694	-
All Other Commodities	451,157	533,088	118%

N.E.C. Not elsewhere classified

Due to changing market demands and growing transport via pipeline (i.e., TC Energy and Dakota Access Pipelines), numbers of crude oil shipments along the Missouri River and other inland waterways have

greatly decreased. No such shipments occurred from 2018 through 2021. Available data shows that hazmat and other commodities transported downriver to Kansas City increased significantly from 2017 levels. In addition, overall commodity transports on the river segment between Kansas City and St. Louis increased during this period.

2.2.8 Roadways

The Kansas City area’s system of roadways is among the most extensive in the nation. According to 2020 Federal Highway Administration statistics, the Kansas City region maintains more miles of highway per capita than all other urbanized areas with populations over 500,000. Residents of the Kansas City metropolitan area rank ninth highest in daily vehicle miles traveled per person, primarily along the interstate highways (I). Kansas City’s roadway infrastructure includes the following:

- Four interstates (I-70, I-49, I-35, and I-29)
- Four interstate linkages (I-435, I-635, I-470, and I-670)
- Nine U.S. highways.

Table 17 lists miles of roadways of various classifications in each county, and collectively within the larger MARC planning area. Companion Figure 9 illustrates roadway locations.

Table 17: 2024 Regional Road Classes by Mile

Roadway Type / County	Interstate	Freeway / Expressway	Principal Arterial	Minor Arterial	Major Collector	Minor Collector	All Other Roads	Totals
Cass	78	38	13	100	236	44	1,586	2,096
Clay	133	127	61	154	202	12	1,584	2,274

Leavenworth	36	5	45	121	237	81	871	1,396
Wyandotte	227	76	50	141	154	90	755	1,493
MARC Planning Area**	1,333	794	550	1,883	2,093	384	15,178	22,215

Notes:

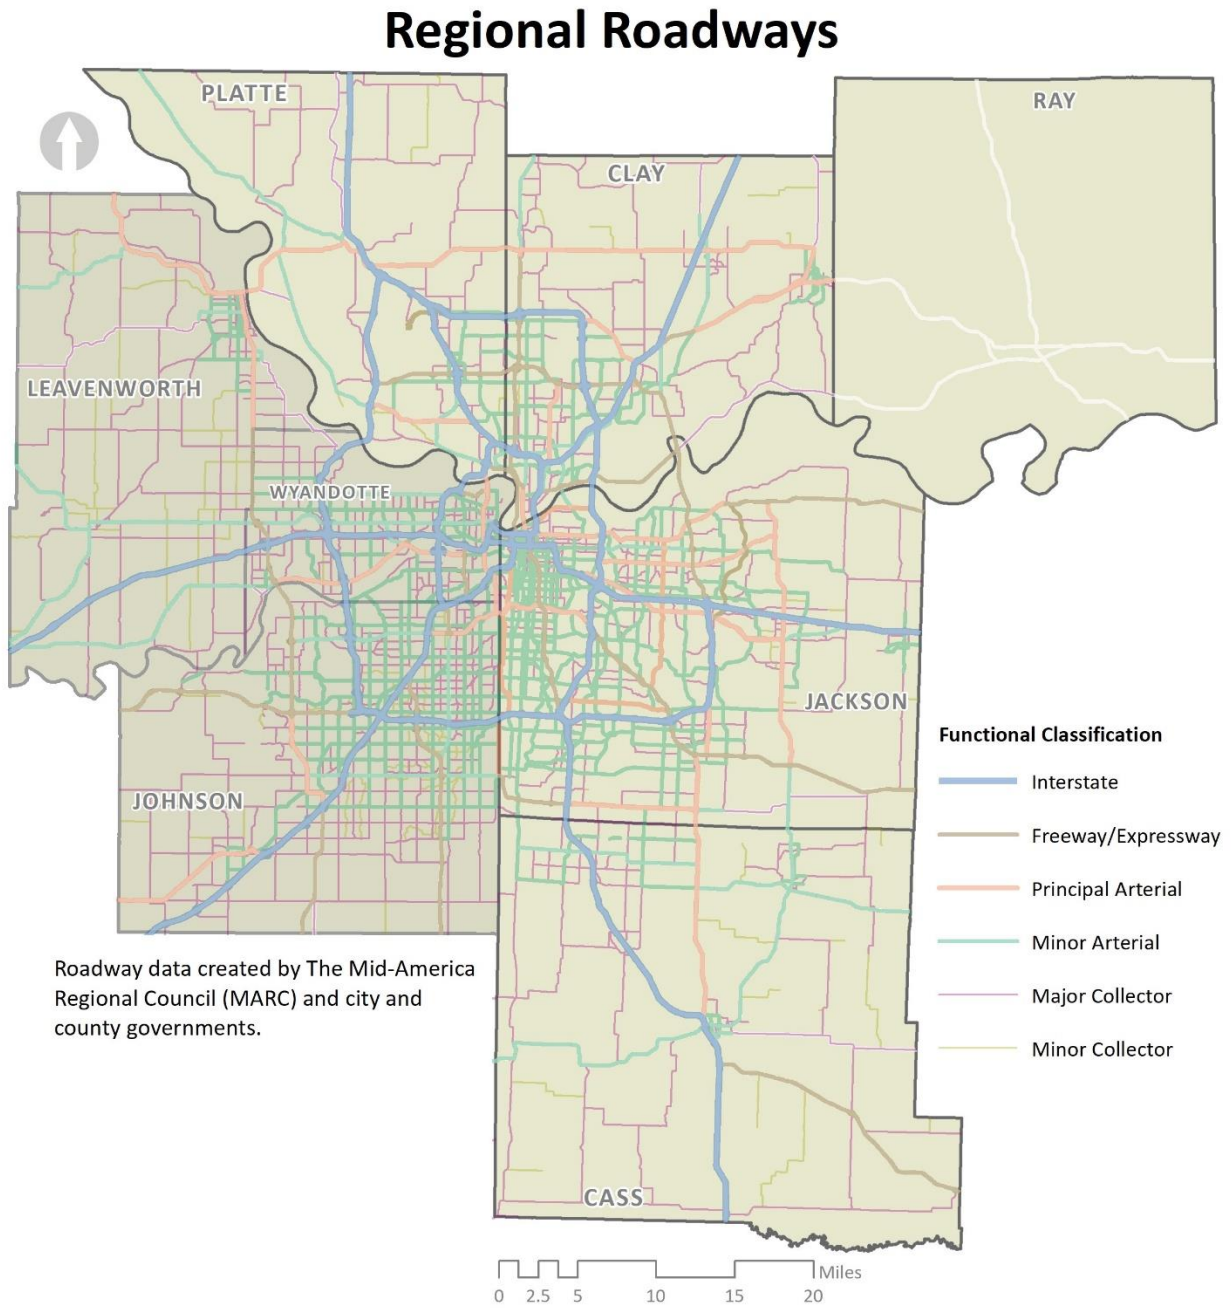

* Kansas City, Missouri miles were counted separately and are included in the appropriate county totals.

** Mileage calculations were estimated based on current regional road data that is in transition. Consequently, some road segment mileages may be duplicated.

MARC does not maintain functional classifications for roadways in Ray County.

MARC Mid-America Regional Council

Figure 9: Regional Roadways

Based on statistics presented in USDOT’s 2017 Commodity Flow Survey, OTR transports accounted for 61 percent (by weight) of all hazmat shipments by truck in 2017. Of these OTR shipments, 75.8 percent involved Hazard Class 3 (flammable and combustible liquids) materials such as gasoline and diesel fuel. In terms of tons shipped, ranked next were Hazard Class 2 Materials (gases) that accounted for 7.6 percent of hazmat shipments via truck. Hazard Class 8 (corrosives) and Hazard Class 9 (miscellaneous) materials made up just 4.3 percent and 2.0 percent of shipments by weight, respectively.

Across all modes of transport, trucks carried the largest share of freight shipments moving less than five hundred miles from point of origin. Average distance traveled per hazmat shipment via truck in 2017 was thirty miles. Table 18⁸ lists the top-20 hazmats shipped by truck in the United States in 2017. Included below are relative percentages of each hazmat transported within and across state boundaries.

Table 18: Top-20 Hazmats Shipped by Truck, 2017

UN/NA ID	Hazmat Name	Tons (thousands)	Intrastate (percent)	Interstate (percent)
1203	Gasoline, includes gasoline with alcohol	794,208	93.2	6.8
1993	Flammable liquids, n.o.s.	437,436	94.1	5.9
1202	Diesel fuel, including heating oil	144,861	92.2	7.8
1075	Liquefied petroleum gas	43,238	67.1	32.9
1999	Tars, liquid, including road oils and asphalt	41,600	71	29
3257	Elevated temperature liquid, n.o.s.	30,606	67.9	32.1
1863	Fuel, aviation	21,857	94	6
1977	Nitrogen, refrigerated liquid, cryogenic	25,938	72.3	27.7
1830	Sulfuric acid (>51 percent acid)	15,262	69.3	30.7

 UN/NA ID United Nations / North America Identification

⁸ A Commodity Flow Study was performed in 2022 by the US Department of Transportation (USDOT); this data is anticipated to be released in May 2025.

In total, over 1.81 billion tons of hazmat were shipped OTR in the United States in 2017. The top-20 hazmats listed above accounted for 1.66 billion tons, 92 percent of all hazmat transports via truck.

National statistics and local traffic data cited above led to insights regarding the number of OTR hazmat shipments through/within the MARC planning area in 2017. USDOT national-level data indicate that about 7 percent of all truck transports involved hazmat shipments requiring USDOT placarding. Applying average annual daily truck traffic (AADTT) counts obtained from Missouri Department of Transportation (MODOT) and Kansas Department of Transportation (KDOT) allowed identification of the highest-frequency roadways for hazmat transports in the Kansas Mid-America LEPC and Missouri Region A Urban LEPC. Based on these data, about 20,900 trucks passed along east and westbound segments of I-70 at Little Blue Parkway in Jackson County, indicating 1,463 hazmat shipments per day. In Kansas, the highest AADTT was identified along I-35 at Old East 56 Highway in Johnson County, where about 14,010 trucks passed north and south, indicating 981 OTR hazmat shipments per day.

Notably, shipments of USDOT Table 2 materials exceeding 1,001 pounds must be placarded. In addition, hazmats transported in bulk containers and smaller quantities of certain dangerous substances—described in 49 CFR 172.5 (USDOT Table 1)—must also be identified by United Nations / North America Identification (UN/NA ID) numbers. The UN/NA ID is a 4-digit code assigned to an individual chemical or to a hazardous substance category.

2.3 VULNERABLE POPULATIONS

Throughout the Mid-America HEPA planning area, there are 2,400 facilities that use/store significant quantities of hazmat. Several chemical facilities are near densely populated areas and/or vulnerable populations/locations. These areas and vulnerable populations are at greater risk of exposure during a hazmat incident and more likely to require evacuation and/or shelter in-place during a hazmat release.

Most small hazmat incidents are contained at the facility level before damaging property or threatening lives. However, releases of EHS or large quantities of other chemicals may result in significant negative impacts to persons, environment, and infrastructure. Potential impacts may involve multiple injuries/deaths, shutdown of key services, contamination of large communal areas, and permanent abandonment of public and private properties.

While proximity of vulnerable populations to a chemical facility is a crucial factor during a hazmat release, several other factors play important roles in determining community outcomes. Age of impacted homes, health challenges, disabilities, language barriers, dependence on public transportation, and lack of funds to evacuate are also determinative factors. Tables 19 and 20 list percentages of certain vulnerable populations, by individual and household characteristics, residing in MARC's planning area.

Table 19: Vulnerable Populations (Individual Characteristics)

County	Total Population	Persons with Disability	Percent with Disability	Over 65 and Living Alone	Percent Over 65 and Living Alone	Persons Below 200% of Poverty	Percent Below 200% of Poverty
Johnson (KS)	610,742	95,748	16.6	23,445	24.8	84,090	15.2
Leavenworth (KS)	82,050	18,759	25.3	2,942	26.9	18,379	23.6
Wyandotte (KS)	167,989	42,660	23.1	7,045	31.5	65,249	37.1

* Average percent among all counties.

2.3.1 Vulnerable Populations Intensity Index

To better identify vulnerable populations, an intensity index of U.S. Census demographics was created to locate vulnerable populations, assist planning, and outreach activities. The following variables were identified as relevant planning considerations and used to develop a comprehensive Vulnerable Population Intensity Index to assess various populations throughout the planning area:

Households with Limited English

Individuals who do not speak English as their primary language and/or who have a limited ability to read, speak, write, or understand English can be considered limited English proficient. Limited English speakers may not have immediate information about a chemical spill without translation. Additionally, access to appropriate aid and safety instructions may be complicated by language barriers. According to a study conducted by a local school district, about 110 different languages are spoken by students and families in the Kansas City area.

Population with a Disability

Emergency planning and response for people with disabilities and functional needs requires a concerted effort. Individuals who are deaf, hard-of-hearing, blind, or have poor vision are less mobile and may need additional assistance. Emergency public communication must be accessible, particularly regarding public warnings and evacuation/protection in-place directions.

Households with No Vehicle

The rate of automobile ownership is lower in urban areas, especially among inner-city and economically disadvantaged populations. Older adults residing also have lower rates of automobile ownership. Individuals with disabilities will have an increased need for accessible transportation. Transportation out of an evacuation zone may be problematic for people who do not have or have limited access to a vehicle.

Population Below 200 Percent of Poverty

Studies around the country indicated that higher-risk chemical facilities are more often located near low-income neighborhoods with minority populations. A report recently presented findings that residents who live closest to chemical facilities have average home values 33 percent below the national average, household incomes 22 percent below the national average, and live in poverty at a rate that is 50 percent above the nation.

Population 65 and Older – Living Alone

Coordination with facilities that care for or house older adults, including long-term care facilities, nursing homes, and senior centers is important for public warning and evacuation support. Facility administrators should be aware of local hazards in their community, such as nearby locations where

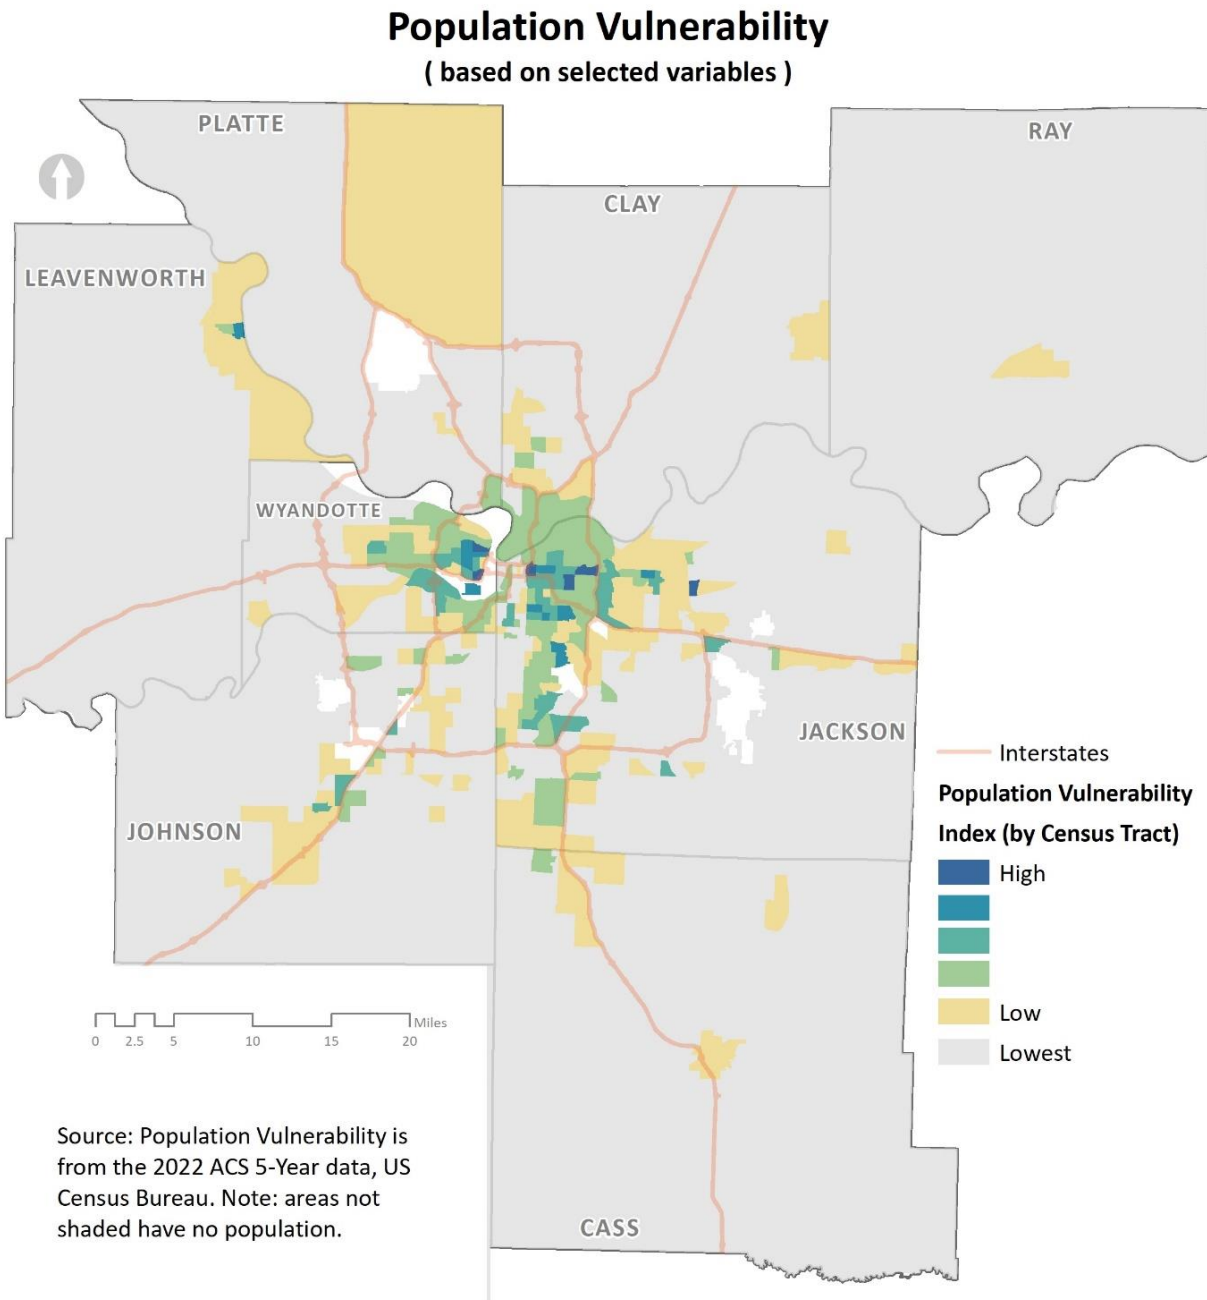

hazmat is used/stored. Chemical facilities maintain plans to notify residents, their caretakers, and facility staff of an emergency, to help ensure protective actions (e.g., shelter in-place or evacuation) are taken.

Coordination with community-based and healthcare service providers serving older adults is critical for reaching persons who may be socially isolated for a variety of reasons. Older adults living in rural areas often have less access to social support services and public messaging via online/social media platforms. Many others lack transportation or are dependent on medications and health services that may not be accessible during an emergency event.

2.3.1.1 Calculating the Index

To develop a useful Vulnerable Population Intensity Index, Z-scores for U.S. Census Tract variables were employed. Variables included persons above the age of sixty-five and living alone, persons with a disability, and individuals living in poverty. Households with no vehicle and that speak limited English were also assigned Z-scores. Z-score were then summarized and averaged (i.e., $[v1 \text{ z-score} + v2 \text{ z-score} + v3 \text{ z-score}]/3$) to arrive at a Vulnerable Population Intensity Index score. Figure 10 illustrates indexed vulnerability scores of populations throughout the region. County-level vulnerability maps are in **Appendix C**.

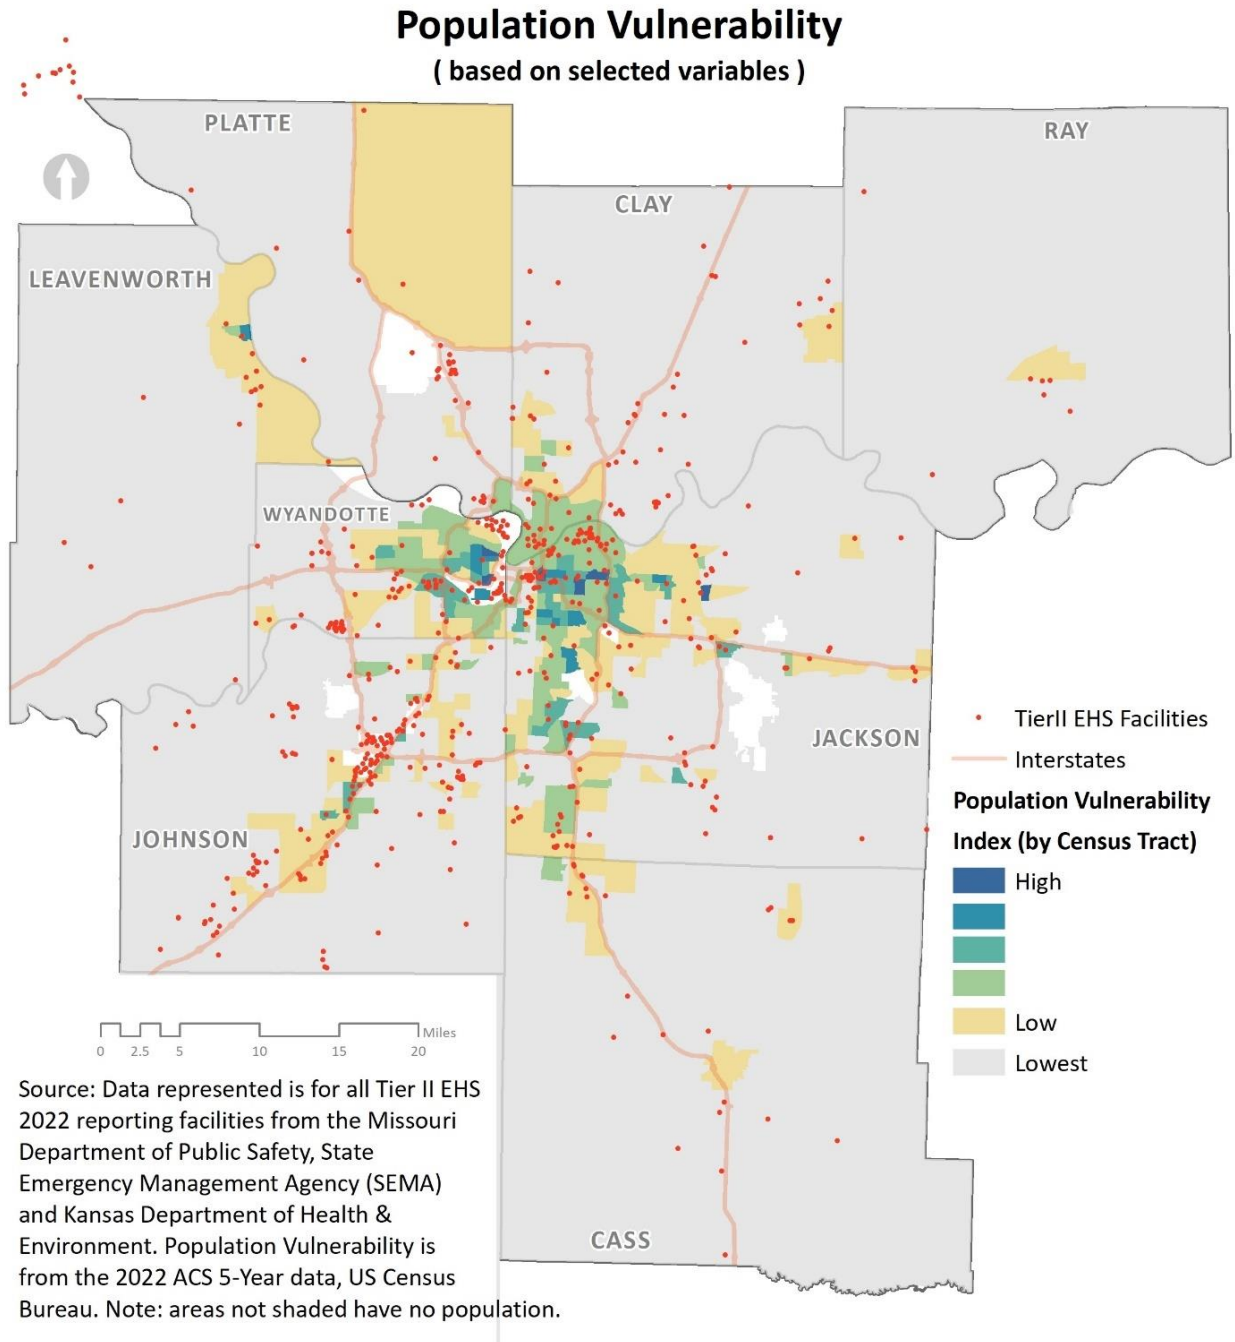

Figure 10: Population Vulnerability, Regional

2.3.1.2 Viewing the Vulnerable Population Index and Critical Facilities

An [interactive website](#) was created to show locations of vulnerable populations relative to chemical facility locations. The website allows users to select varying levels of geography and access county demographics and vulnerable populations by U.S. Census Tract, along with information about hazmat facilities in the area. Other critical data sets for locations of schools, nursing homes, and hospitals are available to aid planning and response efforts. Figure 11 depicts Vulnerable Population Index scores for areas throughout the region with locations of Tier II EHS facilities. County-level vulnerability maps are in **Appendix C**.

Figure 11: Tier II EHS Facilities and Population Vulnerability, Regional

2.4 PLANNING ASSUMPTIONS

- Tier II facilities properly submit chemical inventory lists (Tier II report) and emergency plans as appropriate to the MERC and Missouri Region A Urban LEPC in Missouri; CEPR and Mid-America LEPC in Kansas; and local fire departments within the planning area.
- Each local jurisdiction has an approved LEOP that includes additional information on hazmat emergency response which is coordinated and consistent with this plan.
- Local jurisdictions maintain ongoing communications with reporting facilities in their communities, and work to institute practices to reduce risks to citizens, as well as the environment; and fire service agencies “pre-plan” responses for a hazmat incident with key facilities.
- Facilities that use/store hazmat are fully aware of their obligation to maintain a safe environment and immediately report spills and releases to the appropriate authorities, as required by law.
- Cities and counties maintain procedures to request and receive mutual aid resources from other local agencies, select private-sector partners for hazmat emergencies, and provide resources when requested.
- This plan is consistent with and complements the Missouri Hazardous Substance Emergency Response Plan, the Missouri State Emergency Operations Plan, Kansas Response Plan, and LEOPs.
- Hazmat incidents may occur at any time, day or night, and in densely populated and remote areas.
- The magnitude of a hazmat incident in an area depends on the volume, distribution, and/or use of chemicals and other hazardous substances.
- Negative impacts of an event on citizens, the environment, wildlife, and property depend on the type, characteristics, location, concentration, and quantity of material released. Releases of caustic, irritant, flammable, radiological, and explosive materials may cause deaths, injuries, widespread evacuations, and relocations.
- Releases of hazmat from facilities located in densely populated areas and along major transportation routes can inflict significant damage.
- Emergency responders may have to respond to both accidental and intentional releases of hazmat.
- Hazmat incidents, even minor ones, may require a multi-agency, multi-jurisdictional response including local, regional, state, and federal resources. The Incident Command System (ICS) will be implemented immediately by responding agencies, and in many situations, leadership may elect to establish a Unified Command.
- Hazmat incidents pose significant risks to emergency response personnel. All emergency responders will be properly equipped and trained for hazmat emergency response.

- Hazmat incidents may require large-scale evacuations or shelter-in-place actions. These operations may present significant challenges in terms of warning and notification, logistics, and agency coordination.
- Hazmat incidents will generate widespread media and public interest. The media will be a critical ally for local governments in the effort to quickly disseminate emergency public information and warnings. Local planning includes provisions for providing joint public information from all responding agencies and adjoining jurisdictions, as well as frequently updating the public on the situation as it evolves.
- Hazmat incidents may cause serious long-term damage to public health, property, the environment, and the economy.
- Significant hazmat incidents may require an extended commitment of personnel and resources from involved agencies and jurisdictions. Memoranda of Understanding (MOU) and protocols are in place to address crew rotation, resource allocation, and reimbursement.
- Response to hazmat emergencies in the MARC planning area generally begin with the facility and/or local fire department, and can include a combination of city, county, regional hazmat team, special district, disaster relief agencies, and private-sector representatives. As indicated, appropriate state and federal agencies with statutory authority will be notified and may respond to any incident.
- The general public and media will demand information about the emergency and instructions on appropriate protective measures.
- The local media, particularly radio, will perform an essential role in providing emergency instructions and periodic updates to the public.
- Depending on the severity of the emergency, or the media's perception of the severity of the emergency, regional and national media may also demand information and may play a role in reassuring (or alarming) relatives of patients/victims.
- Depending on the severity of the emergency, telephone communications may be sporadic or inoperable.
- Local and regional radio and/or television stations without emergency power may also be off the air.
- Sufficiently trained staff are required to ensure that media organizations do not become overwhelmed with requests for information.

3. Emergency Planning and Community Right to Know Act (EPCRA)

3.1 GENERAL

EPCRA, also known as Title III of the Superfund Amendments and Reauthorization Act (SARA), exists to ensure that public and government agencies have timely access to information regarding chemicals and chemical releases in their communities so that risk can be addressed, and protective actions can be formulated in advance. EPCRA is defined in Sections 301-330 of Public Law 99-499, with Sections 302-313 and Section 324 most pertinent to LEPCs. The Kansas Mid-America LEPC and the Missouri Region A Urban LEPC have delegated authority to the Mid-America Regional Council (MARC) to make hazardous materials emergency planning information publicly available, as appropriate, on their behalf. MARC's Open Records Policy governs the release of information.

3.1.1 EPCRA 302 – EHS

Facilities that use/store EHSs at or above the TPQ must report this to the states and the LEPC/LEPD within 60 days of the substance arriving at the facility. The facility must designate a liaison person to coordinate EHS response planning with the LEPC/LEPC, and the LEPC/LEPD must incorporate facility information into their response plan. Section 302 substances are subject to Section 312 (Tier II) reporting as well. EPA designates which substances are EHS. The best sole source for EHS is the EPA List of Lists, which lists Section 302 substances, Section 304 substances (Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA]) substances, and Section 313 substances. Section 302 notification is a one-time report and does not have to be refiled unless new substances are brought on facility property (even temporarily) or an EHS is permanently removed.

3.1.2 EPCRA 303 – Planning

Each state shall develop a comprehensive emergency response plan. The LEPC/LEPD is also required to prepare a comprehensive emergency response plan that must be updated at least annually. Local changes in facilities, substances stored, etc., may indicate if more frequent reviews should occur. The LEPC/LEPD plan is to be submitted to the states for approval.

3.1.3 EPCRA 304 – Accidental Releases

Accidental releases of Section 302 EHSs and CERCLA hazardous substances above their respective RQ thresholds are reported to the LEPC/LEPD and to the appropriate state emergency response commission.

3.1.4 EPCRA 311 and 312 – Tier 1 and Tier 2 Reporting

Facilities shall submit annual reports to the state and LEPC/LEPD regarding hazardous substances defined by OSHA. If OSHA requires a facility to post or have available for inspection an SDS for a substance, that

substance is reportable under Section 311 and 312 of EPCRA if present at the facility above its threshold quantity.

Notably, Missouri and Kansas Tier II reporting processes differ in some ways. See **Appendix D** for more information. Neither Kansas nor Missouri requires Tier I reports because Tier II provides all required information. The reports are due March 1st of each year and list chemical inventories from the previous calendar year. The facility must send copies of the report to the appropriate state, LEPC/LEPD, and local fire department(s). Tier II reports, along with Section 302 reports, furnish the information required for EPCRA. Any owner or operator violating Tier II reporting requirements shall be liable to the United States for a civil penalty per day for each violation.

3.1.5 EPCRA 313 – Routine Toxic Releases

The Toxics Release Inventory (TRI) is a record of the total of routine releases of toxic or hazardous substances into the environment from manufacturing or operating processes. The quantity and type of each substance released are known, and the reporting threshold is based on the total quantity released during the year. Section 313 differs from Section 304, which deals only with accidental releases. LEPCs/LEPDs do not receive TRI reports directly. They are submitted to the state and EPA.

3.1.6 EPCRA 322 – Withholding Chemical Type

A facility may be permitted to withhold the identity of a chemical if revealing it could compromise company operations. Section 322 includes a very narrow criterion, identified in 40 CFR Part 350. In practice, less than 1 percent of facilities in the United States have filed such claims. Section 322 addresses trade secrets as these apply to EPCRA Sections 303, 311, 312, and 313 reporting; a facility cannot claim trade secrets under Section 304 of the statute. Only chemical identity may be claimed as a trade secret, although a generic class for the chemical must be provided. Even if chemical identity information can be legally withheld from the public, EPCRA Section 323 allows disclosure of the information to health professionals who need that information for diagnostic and treatment purposes, or to local health officials who must have the information for prevention and treatment activities.

3.1.7 EPCRA 324 – Right-to-Know

The LEPC/LEPD must make available to the public any emergency response plans, SDSs, Tier I/II Form Rs, and Section 304 written follow-up notices they have received. The LEPC is required to publish annually a notice through print or electronic means (website, television, radio, etc.) that LEOPs, SDSs, and/or Tier II forms have been submitted. The notice must include the location where such documents may be reviewed during normal business hours. Facilities that have submitted Tier II reports may request that the LEPC/LEPD keep confidential the locations of hazmat within those facilities.

3.2 PUBLIC MEETINGS

Meetings of the Mo LEPD and Kansas LEPC are held at least quarterly to bring together emergency response partners, facilities that house hazmat, transporters of hazmat, and others for an opportunity to plan together, inform the public, and gather citizen input for planning efforts. Citizens are encouraged to attend such meetings to stay informed of activities and plans related to hazmat emergency response. Information regarding meeting dates and times is available at the MARC website⁹.

3.3 COMMUNITY RIGHT-TO-KNOW INFORMATION

The Kansas LEPC and Mo Regional A Urban LEPD provides the following informational resources, when available and permissible to share, to the public:

- Tier II Reports
- SDSs
- Written Follow-Up Notices of Emergency Chemical Releases
- Other information used during emergency planning as received from facility owner(s) or operator(s).

3.3.1 Tier II Reports

Tier II reports require facilities manufacturing, using, and storing hazmat to provide basic facility information, employee contact information pertaining to both emergencies and non-emergencies, and information about chemicals stored or used at the facilities. The Tier II chemical information reported by a facility includes:

- The chemical name or the common name as indicated on the SDS.
- An estimate of the maximum amount of the chemical present at any time during the preceding calendar year, and the average daily amount
- A brief description of the manner of storage of the chemical
- The location of the chemical at the facility
- An indication of whether the owner of the facility elects to withhold confidential location information from disclosure to the public.

3.3.2 Safety Data Sheets (SDS)

Facilities that produce or import hazardous chemicals must create or obtain an SDS for the material. Information conveyed on an SDS includes the chemical and common name(s), physical and chemical characteristics of the hazardous chemical, physical hazards of the hazardous chemical, protective measures, etc. Regarding any hazardous chemical used or stored in the workplace, facilities are

⁹ MARC (2019). LEPC. Retrieved July 16, 2021, from <https://www.marc.org/Emergency-Services-9-1-1/LEPC>

responsible for the following to comply with the Hazard Communication Standard Right-to-Know provisions:

- Maintaining SDSs and making them available to employees
- Maintaining a hazard communication program detailing plans in place for safe handling of chemicals
- Maintaining a written chemical inventory of every hazardous chemical in the facility to which employees are exposed.
- Maintaining proper labels and warning signs associated with said chemicals.
- Training employees on chemical hazards and necessary precautions.

After the implementation of the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) in June 2015, all SDSs should be replaced with GHS-formatted SDS information. By June 1, 2016, all facilities should fully comply with “HazCom 2012” (the law that requires GHS labeling). This includes any necessary updates to HazCom programs, training of employees on any newly identified chemical hazards (identification of new hazards is during the reclassification process chemical manufacturers are to undertake), and updates to SDS libraries and secondary labels.

Many companies now utilize web-based reporting systems to comply with GHS requirements. This type of cloud-based reporting system allows easy access to SDS information and tools for incident management based on that information, and flags SDSs in GHS format. These systems can also develop inventory reports for state and federal forms, offer container tracking across the facility with mobile barcode scanning, check chemicals and ingredients against various hazardous substance lists; and provide chemical banning and approval tools. Some of these online tools can be used to search or find SDS data sheets, as well as create online SDS binders with capability of sharing the information with employees, state and federal agencies, and other appropriate entities.

3.3.3 Written Follow-Up Notices of Emergency Chemical Releases

Following accidental releases above the RQ of substances listed as EHSs and/or CERCLA Hazardous Substances (40 CFR 302.4) (except for releases during transportation or from storage to transportation), covered facilities are required to make immediate (voice) and written follow-up reports. The State of Kansas “Form A” and State of Missouri “Hazardous Material Release Form” are follow-up reporting templates and are available in **Appendix G**. Written follow-up reports are to be submitted to the LEPC/LEPD and appropriate state entity, and to supplement the immediate report with information regarding:

- Actions taken to respond and contain the release.
- Any known or anticipated acute or chronic health risks associated with the release.
- Where appropriate, advice regarding medical attention necessary for exposed individuals (40 CFR Parts, § 355.40 through 355.43).

3.3.4 Other Information

LEPCs/LEPDs, during emergency planning, may request additional information from facility owners or operators to aid in LEPC/LEPD planning efforts. If not protected, this information may be made available to the public.

3.4 PROCESS TO REQUEST COMMUNITY RIGHT-TO-KNOW INFORMATION

Any person may request hazmat information held by the LEPC/LEPD. All requests shall be in writing (email, fax, letter, or the MARC website at <https://www.marc.org/about-marc/contact-us/open-records-request>) and include the name of the requestor, contact information, and the specific information requested. Requests for Tier II information must specify a particular facility by name and address. If the LEPC/LEPD has that hazmat information requested, the LEPC/LEPD will provide it. If the information is not on hand, the LEPC/LEPD may request the information from the appropriate entity, assuming the information is not otherwise protected.

The LEPC/LEPD will not generate specialized lists or sort existing electronic databases to meet the specific needs of a requestor unless the requestor can demonstrate a valid public need, and the request does not create an undue burden. Such requests will be considered case by case, with final disposition determined jointly by the LEPC or LEPD Chair, and a MARC official (Executive Director or Director of Financial Affairs). A requestor of EPCRA information may also arrange a date and time to meet with LEPC/LEPD representatives during normal business hours to inspect records.

The LEPC/LEPD will reply to all requests within 3 days, conveying either the requested information or a timeline to provide the requested information. Federal law allows for up to 45 days to produce Tier II information, depending on information availability. Public information requests shall be submitted to MARC's Custodian of Records, via letter, email, or fax:

Mid-America Regional Council c/o McKenzie Neds
600 Broadway, Suite 200
Kansas City, Missouri 64105-1659
Phone: (816) 701-8202 E-mail: mnedes@marc.org

The public may also request information from their respective states and are encouraged to contact their appropriate state agency for methods and procedures of requesting information.

Other general questions and inquiries can be submitted directly through the MARC website using the web-completion form at: <https://www.marc.org/about-marc/contact-us>.

3.5 HAZMAT INFORMATION AVAILABLE FROM OTHER AGENCIES

3.5.1 Toxic Release Inventory (TRI)

EPCRA Section 313 requires EPA and the states to annually collect and make available Toxic Release Inventory (TRI) data on releases and transfers of certain toxic chemicals from industrial facilities. Goals of TRI are to empower citizens through information and to hold companies and local governments accountable in terms of how toxic chemicals are managed. TRI data are not reported directly to the LEPC/LEPD. Facilities and citizens in the MARC planning area can access TRI data and reports online at EPA's TRI Data & Tools website.

3.5.2 EPA National Library Network

The EPA National Library Network includes libraries throughout the country and allows access to a wide range of general information on environmental protection and management, basic sciences, applied sciences, and extensive coverage of topics featured in legislative mandates such as hazardous waste.¹⁰

3.6 AVAILABILITY OF EMERGENCY PLANS

3.6.1 Regional Hazmat Emergency Preparedness Plan

The plan is available on the MARC website.¹¹

3.6.2 Local Hazmat and Emergency Operations Plans

Each political subdivision in Missouri and Kansas is required to develop a LEOP that includes an annex specific to hazmat incidents.

- In Kansas, authority and responsibility for emergency planning normally lie at the county level, except when the Governor determines a city needs a disaster agency of its own (KSA 48-929). For specific local information, the requester may be referred to a local governmental agency or facility to receive the appropriate contact information. Each agency will follow its own internal procedures for release of information and viewing (including, but not limited to, applicable limitations, costs for copying, etc.).
- In Missouri, authority and responsibility for emergency planning are at the county and local jurisdictional levels. Missouri law (RSMo Ch. 44.080) requires all political subdivisions to establish a local emergency management organization, which is generally a city or county emergency manager supported by city and county government agencies. This organization is responsible for all aspects of emergency preparedness, including mitigation, planning, response,

¹⁰ EPA (2023). EPA National Library Network. Retrieved June 20, 2023, from <https://www.epa.gov/epalibraries>

¹¹ MARC (2018). Emergency Plans. Retrieved June 20, 2023, from <https://www.marc.org/safety-security/emergency-services-plans>

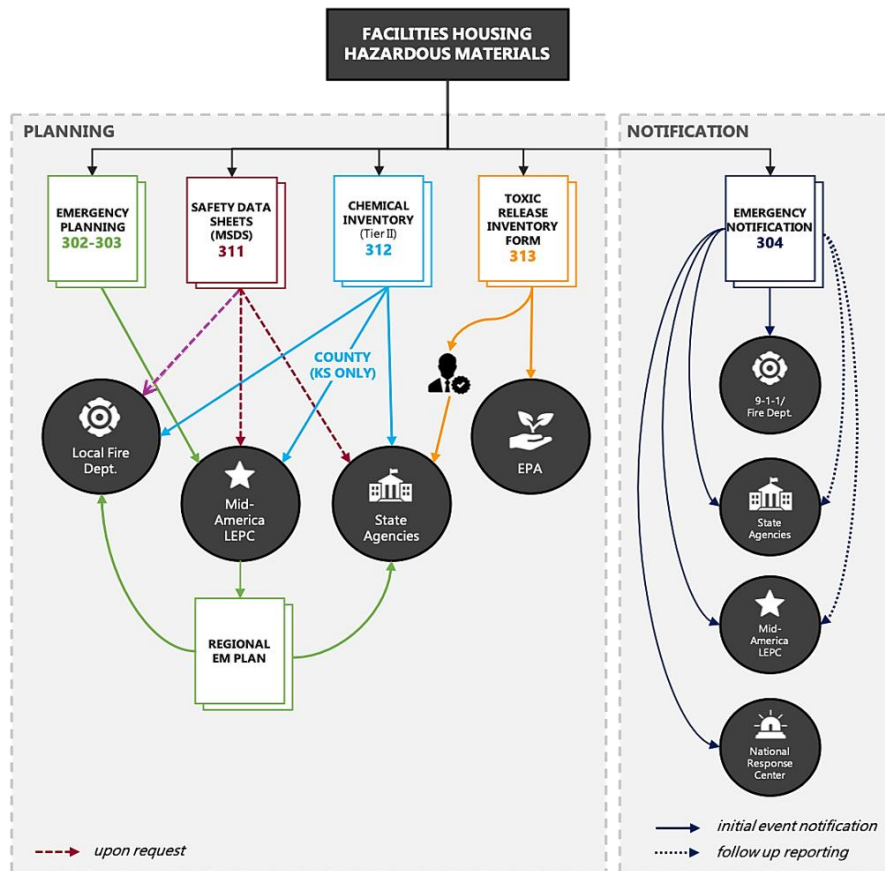

and recovery. The planning requirements for hazmat are included in "Missouri All-Hazard Emergency Planning Guidance" available online, at https://sema.dps.mo.gov/newspubs/publications/leop_planning_documents.php.

Citizens interested in reviewing their jurisdiction’s plans are encouraged to contact their local emergency manager for plan availability or restrictions.

3.7 REQUIREMENTS AND GUIDANCE FOR FACILITIES

Highlighted in this subsection are EPCRA (<https://www.epa.gov/epcra>) requirements and guidance for facilities to consider when developing their own procedures for responding to a hazmat incident. Facilities that manage hazmat are encouraged to contact regulatory authorities, attorneys, or professional consultants for legal and hazmat reporting requirements, and should develop their own procedures for responding to a hazmat incident. Figure 12 describes the flow of information and legal requirements for facilities housing hazmat.

Figure 12: EPCRA Major Information Flow/Requirements for Hazmat Facilities

3.7.1 Reporting Requirements

3.7.1.1 EPCRA Section 302 — Emergency Planning

Any facility, business, or individual housing an Extremely Hazardous Substance (EHS) in an amount exceeding the Threshold Planning Quantity (TPQ) must complete a Tier II form listing EHSs at the facility, including those having arrived on site within the previous 60 days. Submittal of a Tier II Form is the mechanism under which that notification process occurs.

3.7.1.2 EPCRA Section 303 — Facility Coordinators

Any facility, business, or individual housing an Extremely Hazardous Substance (EHS) in an amount exceeding the Threshold Planning Quantity (TPQ) must provide a completed Tier II form listing EHSs held. The owner or operator of a facility shall designate a facility representative who will participate in the local planning process as a facility emergency response coordinator and shall note this individual on the Tier II form.

3.7.1.3 EPCRA Sections 311 and 312 — Chemical Inventory/Tier II

Submittal of a Tier II report by March 1 of each reporting year is required of all facilities with more than 10,000 pounds of hazardous chemicals for which an SDS is required under the OSHA hazard communication standard; or facilities that have more than 500 pounds or the TPQ of an EPCRA EHS and/or 100 pounds of explosive or blasting agents.

Submittals of Tier II forms are required to the appropriate SERC, LEPC/LEPD, and the local fire department.

Organizations in Kansas shall submit a Tier II form to the following:

- KDHE online via <http://kansas.tier2online.com>
- Their local fire department using appropriate means available.
- Their County emergency management agency by the following means:
 - Johnson County:
Email to TierII@jocogov.org
 - Wyandotte County:
Email to tier2@wycokck.org
 - Leavenworth County:
Mail hard copy to:
Leavenworth County Courthouse, Attn: Emergency Management
300 Walnut, Leavenworth, KS 66048

After receiving the Tier II form, the counties will submit copies to MARC.

Organizations in Missouri shall submit a Tier II form to the following:

- MERC via <https://hazmat.dps.mo.gov> Reporting facilities are strongly encouraged to utilize the “Optional Distribution” provided by Missouri Emergency Response Commission (MERC) to have a copy of the SARA II EHS electronically delivered to MARC as well as to their local emergency response agency. By selecting this method, reporting facilities would satisfy the EPCRA requirements. For reporting facilities that do not select this method, the following steps must be taken to satisfy EPCRA requirements.
 - Mo LEPD in care of MARC Emergency Services, mcheney@marc.org or fax to (816) 421-7758
 - Their local fire department, using appropriate means available.

Refer to **Appendix D** and **Appendix G** for additional reporting processes, forms, and information.

3.7.1.4 EPCRA Section 313 — Toxic Emissions

Submittal of a TRI (Form R) report to EPA and state agencies by July 1st of each reporting year at one of the following addresses is required of facilities having Standard Industrial Classification Codes 20-39, with more than 10 employees, who have manufactured, processed, or otherwise used toxic chemicals at more than the threshold quantities:

US EPA, EPCRA Reporting Center, Toxic Chemical Release Inventory
P. O. Box 3348

Merrifield, VA 22116-3348; or, utilize the EPA’s online TRI reporting system at:

<https://www.epa.gov/toxics-release-inventory-tri-program/electronic-submission-tri-reporting-forms>

Missouri Department of Natural Resources (MoDNR), Technical Assistance Program
P.O. Box 176
Jefferson City, MO 65102

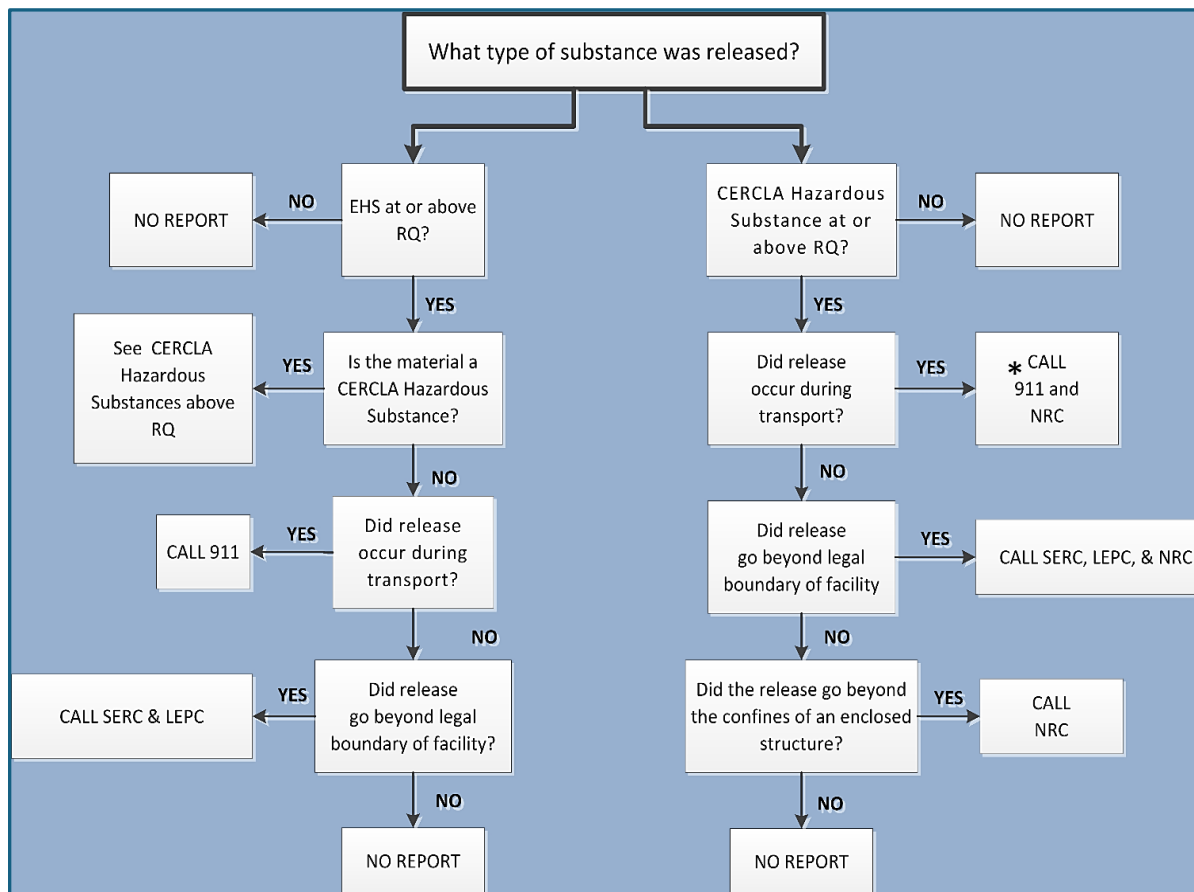

Kansas Department of Health and Environment (KDHE), Bureau of Air and Radiation
1000 Jackson, Suite 310
Topeka, KS 66612-1366

3.7.2 CERCLA and EPCRA Notification Requirements

Per EPCRA Section 304 (Accidental Releases), any facility where an Extremely Hazardous Substance (EHS) is released in more than the EPCRA 304 Reportable Quantity (RQ) and/or any facility where a hazardous substance on the CERCLA list is released in more than the CERCLA RQ must immediately evaluate its requirements to make timely notification of the release to the appropriate authorities and stakeholders.

Figure 13 describes reporting requirements, based on CERCLA and EPCRA, for hazardous facilities in the region. Additional notification guidance appears in Sections 3.7.2.1 and 3.7.2.2. Facilities should also review 40 CFR 302 and 40 CFR 355 for specific notification requirements.

Figure 13: CERCLA and EPCRA Release Reporting Chart

Notes:

* Calls to 911 constitute notifications of accidental release to the LEPC/LEPD

To ensure compliant reporting, both initial pathways must be assessed.

The NRC, SERC¹², and/or LEPC must be notified of a release of an RQ of a hazardous substance or EHS into the environment according to CERCLA §103(a) and EPCRA §304. The purpose of the notification is to alert government officials that an emergency response may be necessary to protect human health and the environment. Decisions to respond to a reported release occur on a case-by-case basis. Reporting a release does not free the responsible party from liability for cleanup costs (50 Federal Register [FR] 13459; April 4, 1985). The following sections detail the CERCLA and EPCRA-specific notification triggers and notification requirements.

¹² In Missouri, contacting MDNR constitutes notification to the SERC; in Kansas, contacting the Kansas Division of Emergency Management (KDEM) and/or the Kansas Department of Health and Environment (KDHE) constitutes notification to the SERC.

3.7.2.1 CERCLA Notification Triggers and Reporting Requirements

The following necessitate immediate notification to the NRC under CERCLA:

- Release of a hazardous substance that equals or exceeds the RQ.
- Release from a vessel or facility.
- The reportable quantity is released within a 24-hour period.
- The release is into the environment.

To fulfill the requirements under CERCLA §103(a), the person in charge of the vessel or facility must immediately report release of a hazardous substance to the NRC following determination that an RQ has been released into the environment (40 CFR §302.6). Upon receipt of the report, the NRC will notify the EPA On-Scene Coordinator (OSC) at the appropriate EPA Regional office or U.S. Coast Guard district office. The OSC informs state and local officials and decides on the Federal Government's response.

3.7.2.2 EPCRA Notification Triggers and Reporting Requirements

The following releases necessitate immediate notification to the SERC and LEPC under EPCRA:

- Release of a hazardous substance or EHS that equals or exceeds its RQ with potential to affect off-site persons.
- Release from a facility at which a hazardous substance or EHS is produced, used, or stored.
- The reportable quantity is released within a 24-hour period.

To meet the requirements under EPCRA §304, the owner or operator of a facility must report releases of hazardous substances and EHSs to the SERC and LEPC immediately. The notice to the SERC and LEPC must include (40 CFR §355.40(b)(2)) the following:

- The chemical name or identity of any substance involved in the release.
- An indication of whether the substance is an EHS.
- An estimate of the quantity released into the environment.
- Time and duration of the release
- Medium or media into which the release occurred.
- Any known or anticipated acute or chronic health risks associated with the emergency, and where appropriate, advice regarding medical attention necessary for exposed individuals.
- Proper precautions to take as a result of the release, including evacuation (unless such information is readily available to the community emergency coordinator pursuant to the emergency plan)
- Names and telephone numbers of the person or persons to contact for further information.

In Missouri, send a “Hazardous Materials Release Form” follow-up report to the MERC and Region A Urban LEPC via fax to (816) 421-7758 or email to elynych@marc.org. The Hazardous Materials Release Form is in **Appendix G**.

In Kansas, spill notification must be made by phone by calling (785) 291-3333. The caller will be asked to supply basic information such as location, substance, state of substance, etc., which will be utilized to inform additional state agencies with a “need to know” regarding the release. After this notification is made, access will be granted to the spiller on WebEOC, where Form A will be accessible through a secure portal. The majority of the information reported during the initial phone call will be populated on Form A, leaving a minimal amount of additional information to be collected once accessed. Form A must be completed within seven (7) days following the incident. The type of information that will be requested can be reviewed by viewing Form A in **Appendix G**. Spill notification must also be reported to MARC using Form A via fax to (816) 421-7758 or email to elynych@marc.org.

4. Organization and Responsibilities

4.1 IN PREPAREDNESS

4.1.1 Kansas Mid-America LEPC and Missouri Region A Urban LEPD

The LEPC and LEPD are planning organizations that convene key stakeholders in the community to coordinate preparedness activities related to hazmat incidents. Neither is a response agency; however, county emergency managers within the region also serve as Community Emergency Coordinators to address local EPCRA-related issues that may arise. Local emergency management contacts are accessible at [MARC's website](#) and are also listed in **Appendix A**. Specific requirements of the larger LEPC and LEPD are as follows:

- Appoint a chairperson and establish committee rules.
- Distribute, review, and update this plan annually.
- Submit a copy of this plan and any revisions to the MERC and CEPR.
- Evaluate the need for resources to develop, implement, and exercise the plan, and offer recommendations regarding those resources and the means for providing them.
- Establish procedures for receiving information and responding to public comments and designate an information coordinator.
- Establish procedures for processing requests from the public under community right-to-know provisions, including LEPC/LEPD meeting minutes and notifications of committee activities.
- Receive information and communications from facilities and/or transporters related to:
 - Notifications of chemical releases (EPCRA 304).
 - Tier II forms (EPCRA 312) that contain information on materials, including average amounts on site, locations of chemicals, etc.
 - Chemical Safety information notices on materials requiring SDS (EPCRA 311).
- Publish a notice annually to inform the public where, when, and how information is available through the LEPC for review.
- When requested by involved jurisdictions and agencies, provide a forum for post-incident analysis of Level II and III hazmat incidents.
- Offer recommendations to local governments on additional resources that may be required and potential means for acquiring such resources.
- Assist local agencies in developing and conducting hazmat exercises and training.

4.1.2 Local Emergency Service Agencies

- Develop plans and procedures for response to hazmat incidents.
- Use this plan as guidance for local planning documents.
- Maintain awareness of industry within the jurisdiction and any known hazards.
- Maintain resources (equipment, training, etc.).
- Participate in training, exercises, and after-action reviews.
- Facilitate community outreach and education on risks and protective actions.
- Encourage local fire departments to develop regionalized SOPs/SOGs for response and on-scene operations to ensure inter-agency interoperability.

4.1.3 Private Industry

- Designate facility Emergency Coordinator.
- Maintain SDSs.
- Develop emergency plans.
- Report information to LEPC/LEPD (per government requirements).
- Maintain resources, including equipment and systems.
- Participate in training, exercises, and after-action reviews.
- Facilitate community outreach and education on risks and protective actions.

4.1.4 State, Federal, and Non-Governmental Organizations

- Support planning efforts by facilities and response agencies as needed.
- Communicate capabilities and resources available to support local response efforts.
- Participate in training, exercises, and after-action reviews.

4.2 IN RESPONSE

4.2.1 Kansas Mid-America LEPC and Missouri Region A Urban LEPD

- Receive notifications (calls to 911 constitute notifications of accidental release to the LEPC/LEPD).
- Assist in the identification of resources for a local emergency response agency during a protracted or large-scale incident.

4.2.2 Local Emergency Service Agencies

- Establish command of the incident scene, and ensure ICS is followed. Determine resources needed for response operations.
- Perform core functions to ensure life safety and protection of property while minimizing impacts on the environment.
- Encourage local fire departments to staff the Community Emergency Coordinator position within their respective fire protection districts and jurisdictions.

4.2.3 Private Industry

- Notify the appropriate authorities of the incident immediately.
- Support operations with resources and technical expertise.
- Participate in investigation to determine cause.
- Facilitate clean-up and restoration effort as appropriate (e.g., remediation services, heavy-duty tow services, technical expertise).

4.2.4 Federal Agencies

4.2.4.1 Federal Agencies Generally

- Support response activities with additional resources (equipment, technical expertise, etc.) as requested.
- Advise command staff of available resources.
- State and federal agencies will operate under their own response plans and will integrate into the ICS structure.

4.2.4.2 EPA

- Supports, through the Federal OSC (as needed or as requested), local and state jurisdictions during hazmat and oil release incidents.

- Coordinates, integrates, and manages the overall federal effort to detect, identify, contain, decontaminate, clean up, dispose of, or minimize discharges of oil or releases of hazmat, or prevent, mitigate, or minimize the threat of potential releases.
- Provides expertise on environmental effects of oil discharges or releases of hazmat, and environmental pollution control techniques.
- Manages EPA special teams under the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), including the Environmental Response Team, National Decontamination Team, and Radiological Emergency Response Team, which provide specialized technical advice and assistance to responders.
- Coordinates, integrates, and provides investigative support, intelligence analysis, and legal expertise on environmental statutes related to oil and hazmat incidents, including those regarding criminal cases, in support of responders.
- Serves as the lead federal agency under ESF #10 of the National Response Framework.

4.2.5 Nongovernmental Organizations / Other

- These may provide information, food, shelter, medical assistance, and other essential services to persons impacted by the incident.
- Hospitals will treat patients and support decontamination (decon) of affected individuals, as needed.

4.2.6 State Agencies

4.2.6.1 MoDNR

- Receives notification from the party responsible for a spill, leak, or discharge of hazmat.
- Responds to hazmat incidents, if necessary
- Controls public water supplies in contaminated areas to ensure safety for human consumption.
- Provides sampling support and analysis to determine if private water supplies in contaminated areas are safe for human consumption.
- Provides sampling support and analysis to determine if food supplies in contaminated areas meet health standards for human consumption.
- Provides sampling support and analysis to determine if sport fisheries, wildlife, and game birds in contaminated areas meet health standards for human consumption.
- Coordinates solid waste variances and services, burn permits, and other services as needed.
- Coordinates procedures for temporary storage of stabilized hazmat and manages legal disposal of that hazmat.
- Coordinates and liaises with EPA Region 7.

4.2.6.2 Kansas Department of Health and Environment

- Provides staff members, as necessary, for emergency operations center (EOC) functions including requesting assistance and coordinating with support agencies, managing mission assignments, working with private-sector organizations for resource support, and ensuring financial accountability for ESF #10.
- Provides an analytical laboratory for incident support.
- Coordinates initial assistance from other state and federal agencies.
- Responds as needed to incidents involving oil and hazmat.
- Coordinates with ESF #8 to provide health and safety guidance in response to an oil or hazmat incident, identify medical waste, and help with the investigation of biomedical waste incidents.
- Assists with sampling of water supplies suspected to be contaminated with a hazardous substance.
- Implements the CHEMPACK Program through the Bureau of Public Health Preparedness.
- Provides operational radiological emergency response, including conducting radiological and air monitoring; performing dose assessment, support, and guidance for monitoring and decon of the public; and offering recommendations on need to implement protective actions in accordance with the Nuclear/Radiological Incident Annex.
- Reviews, evaluates, and maintains all radiation dose records for non-licensee emergency workers and other affected individuals.

The above list of responsibilities is illustrative and not complete. For more information on responsibilities related to a hazmat response, reference the ESF #10 Annex of the RCG.

5. Concept of Operations

5.1 INCIDENT MANAGEMENT

Jurisdictions' responses to hazmat incidents should be consistent with NIMS and ICS, which provide a consistent framework for standardizing incident management practices and procedures. This ensures that federal, state, and local governments can work effectively, efficiently, and cooperatively to mitigate and prepare for, respond to, and recover from incidents regardless of cause, size, or complexity.

ICS provides a useful and flexible management system, particularly adaptable to incidents involving multi-jurisdictional and multi-agency response, due to its standardized organizational structure and common terminology. The ICS organizational structure develops in a modular fashion based on the type and size of incident. The organizational structure is staffed from the top down starting with leadership, with four distinct sections that can be further broken down into more manageable groups and units to accomplish specific missions.

The specific organizational structure established for any given emergency will be based on the management and resource needs of the incident. ICS leadership (Command and General Staff) performs similar functions regardless of the type of emergency. Additional information relating to ICS positions and responsibilities is accessible on the Federal Emergency Management Agency's (FEMA) Emergency Management Institute website and training courses.¹³

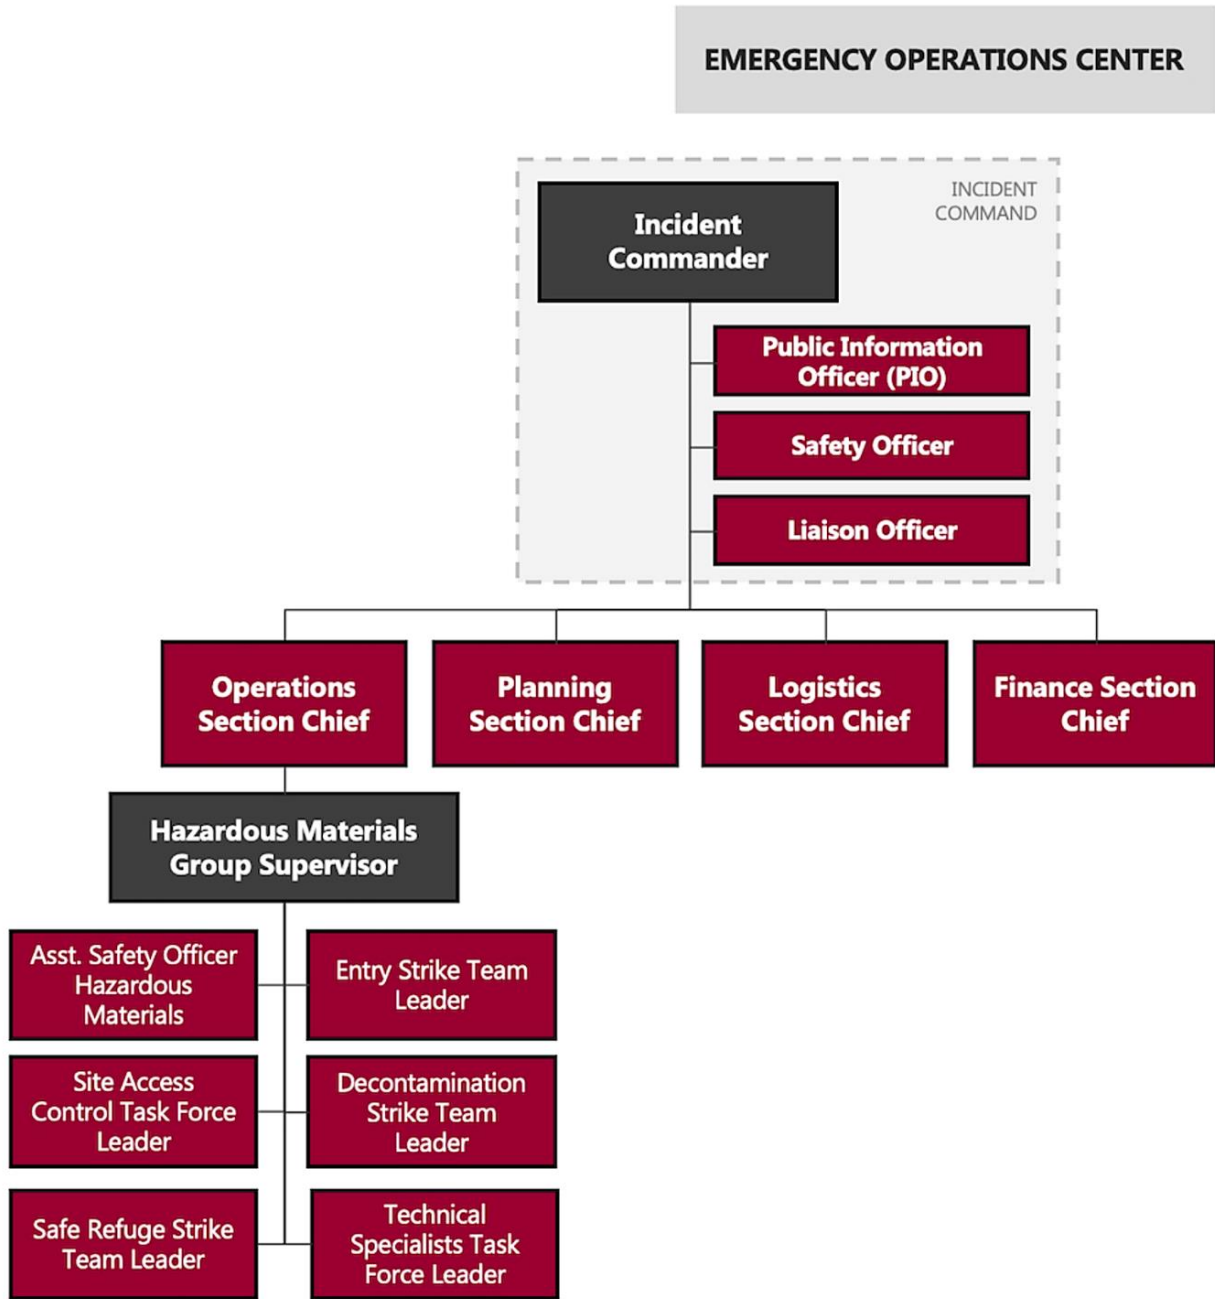

Eight hazmat response teams are available in the Mid-America HEPA region, including seven with enhanced capabilities to respond to weapons of mass destruction (WMD) incidents. The enhanced hazmat teams meet Department of Homeland Security Type 2 Hazmat Entry Team standards. Each team can perform field-testing, air sampling and collection of known or suspected WMD agents or other chemicals; to detect and monitor for radiation sources; capable of stopping the release of WMD agents and other hazardous substances; to decontaminate equipment, personnel, and citizens; and personnel are trained to applicable standards associated with Hazmat response activities. Additional information about the region's hazmat teams is in **Appendix H**.

5.1.1 Hazardous Material Response ICS Positions

The information in this subsection and the following subsections lists roles with specific responsibilities related to hazmat response. Commonly, a Hazardous Materials Group is formed under the Operations Section in the ICS structure, as indicated in Figure 14:

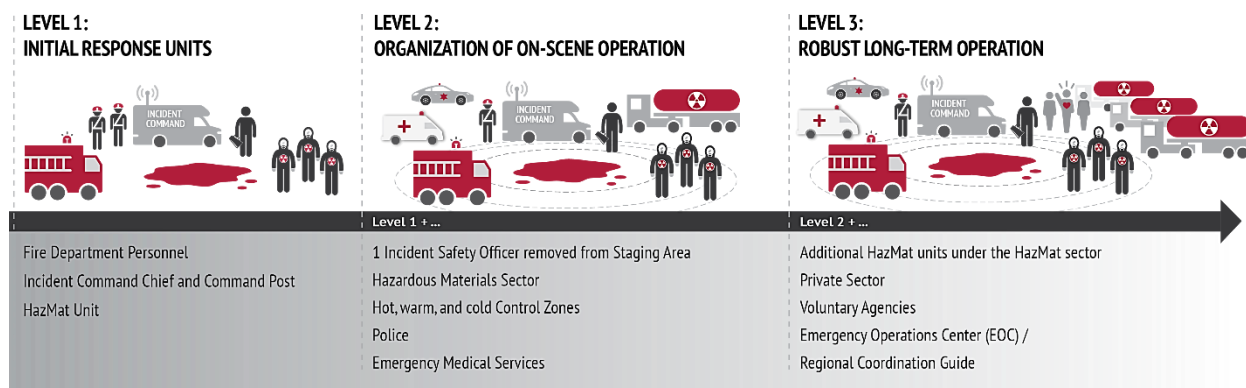

¹³ Federal Emergency Management Agency (FEMA). (2021). ICS Resource Center. Retrieved July 19, 2021, from <https://training.fema.gov/emiweb/is/icsresource/index.htm>

Figure 14: Hazardous Material Response ICS Positions

The sample incident command structure above is a model that is scalable according to needs of the incident and varying capabilities of jurisdictions. Figure 15 illustrates an example of the dynamic, scaling nature of a response to a major hazmat incident:

Figure 15: Hazmat Response Operational Timeline

5.2 RELEASE IDENTIFICATION

Procedures that determine whether a hazmat release has occurred and identify potential/actual impacted areas will vary based on the location of the release (e.g., geography, infrastructure, hazardous contents) and qualifications of on-scene personnel to determine and identify the nature and extent of the hazmat release. Facilities may have their own release identification criteria in their LEOPs. Typically, determination of whether a release has occurred depends on the following:

- Report from facility and/or 911 caller.
- Observation of a breach to containment (note hazard placards and other identifiable information).
- Confirmation of injury, death, or considerable damage.

First responders operating within the MARC region may have specialized hazmat training and qualifications that can aid determination whether a hazmat release has occurred (e.g., awareness, operations, technician) and if so, the scope of the release. DOT's Emergency Response Guide (ERG) is used to help determine the scope of the incident and assess hazards; the RCG Regional Resource Annex is available to identify resources such as response support agencies, equipment, reference materials, etc.; and **Appendix C** of this plan contains information about vulnerable population and certain at-risk locations.

5.3 NOTIFICATION

The initial notification of a hazmat release may originate from multiple sources (e.g., public, regulated-facility personnel, emergency responders). Any individual, including but not limited to, the

facility/community emergency coordinator, who identifies or suspects a hazardous material release will notify 911 to initiate the response process, which includes necessary public notification.

Regarding hazmat releases at regulated facilities (i.e., those with RMPs, Tier II), the facility coordinator (or designee) will notify 911 and/or the local fire department and activate facility emergency response procedures as appropriate. Additionally, the facility emergency coordinator (or designee) will notify the individuals and entities so designated in the LEOP. The lead response agency or designee may communicate notifications outside of federal and state requirements. A notification may include communications with entities as part of a resource request, or with other persons listed in **Appendix A**.

Upon receipt of the initial notification of an actual or suspected hazmat release, the 911 operator will collect pertinent information related to the incident (e.g., chemical, quantity, safe routes of entry, injuries) and dispatch emergency response resources to the incident site.

After receiving the initial dispatch, the local fire department with jurisdiction will coordinate with the responding hazmat team (if dispatched), and will collect the following information to determine the incident severity level (see **Appendix H** for information on incident severity levels):

- Characteristics of the release
- Nature of the release
- Affected area/population (e.g., homes, businesses, sensitive ecosystems, waterways, transportation routes)
- Extent of multi-agency and multi-jurisdictional involvement
- Implementation of protective actions (e.g., evacuation, shelter-in-place)
- Injuries and/or fatalities
- Technical expertise and equipment required to safely mitigate the incident.
- Duration of the incident.

Based on the severity of the incident, the local fire department having jurisdiction, in coordination with the responding hazmat team (if dispatched) and the local EOC (if activated), will initiate procedures to notify the requisite stakeholders based on the appropriate Regional Coordination Level (1 – Local, 2 – Expanded, 3 – Significant Regional Incident) or as stated in the LEOP. The Regional Coordination Levels section in the RCG details the triggers and actions for each Coordination Level.

Coordination may begin at a regional level with recognition of needs for:

- Exchange and/or clarification of information regarding the incident
- Dissemination of common emergency messaging
- Sharing of resources or provision of assistance to impacted jurisdictions.

Upon notification and activation of hazmat response stakeholders, agencies and organizations will conduct inter/intra-agency communications in accordance with agency/organization-specific policies and procedures and the concepts outlined in the ESF 2: Communication Annex¹⁴ of the Kansas City Metropolitan Area RCG.

Guidance related to dissemination of initial incident notifications and follow-on messaging to community stakeholders (e.g., affected residential areas, local businesses, schools, hospitals, media) and the public appears in part in Appendix I.

Regarding incidents at regulated facilities that may or may not need local emergency response services, but are required to notify regulatory agencies/organizations, see the Emergency Notification section.

5.4 EMERGENCY RESPONSE

In response to an actual or suspected hazardous material release, emergency response personnel, including regulated-facility personnel with the appropriate training, will implement emergency response procedures in accordance with local and facility-specific emergency response plans and the ESF #10 – Oil and Hazardous Material Annex¹⁵ of the Kansas City Metropolitan Area RCG to achieve the following overarching objectives:

- Identify, assess, and evaluate the risks involved with the hazardous substance or chemical, biological, radiological, nuclear, or explosive (CBRNE) agent.
- Activate and direct tactical operations involved in response to WMD/ hazmat incidents.
- Conduct rescue and decontamination activities.
- Take appropriate mitigation actions.
- Request additional resources and personnel to assist with the event.

Incidents that do not require an emergency response are outside the scope of this Plan. Some facilities may not need emergency response and would use their cleanup contractor to address low-hazard, low impact incidents.

5.4.1 Incident Assessment

Upon activation of LEOPs for a confirmed or reported hazmat release, the Incident Commander will coordinate acquisition of pertinent incident information to inform protective action decisions, resource and informational requests, and communications / notifications to pertinent stakeholders. Critical information necessary for collection during a hazmat release to support decision making can include:

¹⁴ MARC (2019). Regional Coordination Guide, ESF #2 Communications Annex. Retrieved July 16, 2019, from [https://www.marc.org/Emergency-Services-911/pdf/RCG_ESF2_Communications-\(2019\).aspx](https://www.marc.org/Emergency-Services-911/pdf/RCG_ESF2_Communications-(2019).aspx)

¹⁵ Kansas City Metropolitan Area (2022). Regional Coordination Guide, ESF #10 Oil and Hazardous Materials Annex. Retrieved May 25, 2023, from https://www.marc.org/sites/default/files/2022-03/RCG_ESF10_Oil_and_Hazmat_0.pdf

- Who is leading the response or investigation?
- Estimated damages to or status of critical infrastructures (transportation, power, medical, water)
- Connectivity with the activated EOC and the WebEOC Regional Board.

In addition to the information elements identified above, emergency response personnel should also reference local emergency response plans and the Kansas City Metropolitan Area RCG Base Plan¹⁶ (and associated Annexes) for additional all-hazard information requirements.

5.4.2 Protective Actions

Protective actions, including evacuation and shelter-in-place, may be implemented to protect the public and emergency response personnel from adverse effects of a hazmat release. The decision to initiate protective actions will occur in accordance with local emergency plans. For additional information relating to jurisdiction-specific policies and procedures on evacuation and shelter-in-place, interested parties should contact their local emergency management agency.

Recognizing that evacuation is a complex measure, the decision to order an evacuation must be carefully considered. The Incident Commander will decide whether to implement evacuation or shelter-in-place, in close consultation with supporting agencies and/or governing bodies. Consideration of the option to shelter-in-place should depend heavily on whether exposure risk to citizens would increase by requiring them to go outdoors into a contaminated environment.

The choice between evacuation and shelter-in-place is not mutually exclusive for a single emergency. In a given emergency, it may be most effective to evacuate one portion of the threatened population and instruct others to shelter-in-place. For a list of criteria to aid in protective action decision-making, see **Appendix F**.

¹⁶ Mid-America Regional Council. (2019). Kansas City Regional Coordination Guide. Retrieved May 25, 2023, from [https://www.marc.org/Emergency-Services-911/pdf/RCG_BaseGuide-\(2019\).aspx](https://www.marc.org/Emergency-Services-911/pdf/RCG_BaseGuide-(2019).aspx)

5.4.2.1 Evacuation

Table 21 lists the triggers, considerations, and risks that emergency response personnel should consider when deciding whether to order an evacuation in response to a hazmat release. Figure 9 (Regional Roadways) in Section 2.2 illustrates potential evacuation and alternate evacuation routes throughout the planning area that may be utilized during a significant hazmat incident. An interactive web map application showing locations of hazmat facilities (Non-EHS Tier II, EHS-Tier II, and RMP) and potential evacuation routes is available on the [MARC website](#). Pre-scripted messages related to evacuation operations are in **Appendix I**.

Table 21: Evacuation Triggers, Considerations, and Risks

Topic	Description
Triggers	<p>Precautionary Evacuation</p> <ul style="list-style-type: none"> ▪ Possible boiling liquid expanding vapor explosion (BLEVE) or condition that could cause an explosion. ▪ Conditions or reactions that could lead to increased toxicity of a hazardous material. ▪ Potential for release of an acutely toxic substance ▪ Change in wind direction or other atmospheric conditions. <p>Immediate Evacuation</p> <ul style="list-style-type: none"> ▪ Explosion appearing imminent. ▪ Current or forecasted atmospheric conditions. ▪ Alterations in properties of the hazmat, increasing toxicity, or environmental damage. ▪ Uncontrollable fire, or threat of the fire spreading or becoming uncontrollable, resulting in surrounding facilities catching fire or compounding the hazard. ▪ Inherently unstable material likely to explode or ignite without warning
Considerations	<ul style="list-style-type: none"> ▪ Specific area(s) affected (e.g., commercial, residential, industrial, rural, etc.) ▪ Population affected or threatened, including groups with access and functional needs (e.g., people with disabilities, pets, institutionalized, schools, hospitals, etc.) ▪ Evacuation, response, and egress routes ▪ Length of time required for evacuation. ▪ Anticipated duration of the emergency ▪ Location and capacity of assembly areas and mass care facilities ▪ Security of the evacuation area ▪ Current and forecasted weather conditions
Risks	<ul style="list-style-type: none"> ▪ Exposure of an evacuating population to a released hazmat ▪ Travel problems, particularly in adverse or severe weather. ▪ Economic costs to families, lost wages of evacuees, expenses or lost revenue to business and industry, emergency response personnel costs to government, and costs associated with care and sheltering of evacuees. ▪ Management of those who do not wish to leave their homes or businesses. ▪ Traffic control problems ▪ Difficulty in ensuring communications with the entire impact zone

5.4.2.2 Shelter-in-Place

Table 22 lists the triggers, considerations, and risks that emergency response personnel should consider when deciding whether to implement shelter-in-place protocols in response to a hazardous material release.

Table 22: Shelter-in-Place Triggers, Considerations, and Risks

Topic	Description
Triggers	<ul style="list-style-type: none"> ▪ Inadequate time to implement an evacuation. ▪ Severe weather conditions that preclude movement of people ▪ Apparent necessity of shelter-in-place as a precautionary measure during the incident assessment ▪ Significant threat of exposure to evacuating individuals ▪ Release short-term and not continuous
Considerations	<ul style="list-style-type: none"> ▪ Behavior of threatened people (they must have warning, believe the warning, recognize their risk, and know what to do and how to act) ▪ Physical characteristics of a building or structure ▪ Meteorological conditions (wind speed, wind direction, and air temperature) ▪ Surrounding terrain and vegetation
Risks	<ul style="list-style-type: none"> ▪ Difficulty of communicating a message with instructions to the impacted population ▪ Improper technique or lack of action that would leave some people vulnerable to exposure. ▪ Characteristics if hazard change and requirements for immediate evacuation ▪ People with disabilities or other access and functional needs, and related facilities ▪ Hospitals, nursing homes, and residential care facilities ▪ Schools (public, private, nursery schools, and childcare facilities) ▪ Persons lacking their own transportation

5.5 CONTROL AND DECON

Mitigating a hazmat release must involve control of the material and provisions of decon to affected people and property. Control methods are divided into confinement and containment. A chemical, biological, or radiological incident each involves unique mitigation and decontamination considerations. Many mitigation methods (physical and chemical) require personnel with highly specialized training and use of sophisticated technical equipment (e.g., vent and burn techniques), whereas personnel at first responder operational level can apply other methods (e.g., diking liquid spills).

Law enforcement will be asked to help with evacuations and public messaging, and Emergency Medical Services (EMS) would assist medically at the incident/decontamination site(s) and in the surrounding community. The fire department and hazmat team(s) would provide additional rescue and initial medical assistance to patients in a hazardous area.

As well as controlling the hazardous release, hazmat teams will decon people and address some or all contamination in the “hot” and “warm” zones to reduce the risk that the hazard poses through direct and cross-contamination. Hazmat teams may apply technical decontamination or emergency decontamination techniques depending on the incident. Environmental decontamination may occur in the cleanup phase or begin with the hazmat team response.

5.5.1 Hospitals

Hospitals in the region have basic hazmat decon capabilities through procured equipment and training but may need assistance from hazmat teams with decon activities.

Decon techniques at hospitals may include emergency decon, gross decon, technical decon, along with active drying. Additional considerations are necessary regarding triage, hospital operations and hospital incident management, communication and patient management, and patient treatment. The following hospitals serving the MARC planning area maintain patient decon capabilities:

- AdventHealth Shawnee Mission, Johnson County
- Saint Luke's South, Johnson County
- Saint John, Leavenworth County
- Providence Medical Center, Wyandotte County
- University of Kansas Health System, Wyandotte County
- Excelsior Springs Medical Center, Clay County
- North Kansas City Hospital, Clay County
- Research Medical Center, Jackson County
- Saint Luke's East, Jackson County
- Saint Luke's Hospital, Jackson County

- University Health Truman Medical Center-Hospital Hill, Jackson County
- University Health Truman Medical Center-Lakewood, Jackson County
- Saint Luke's North-Barry Road, Platte County
- Ray County Memorial Hospital, Ray County

Note: Research Medical Center, University of Kansas Health System, and Children’s Mercy Hospital maintain specialized burn units to treat complex burns and wounds.

Hospitals in the metro region maintain emergency plans, as well as supporting protocols and standard operating guides (SOG) for response to all-hazards potentially affecting their facilities. These plans detail the establishment of the Hospital Incident Command System (HICS) and a Hospital Command Center (HCC). Standard operating procedures are maintained as appropriate for specific activities, such as decontamination and self-sustainment in compliance with The Joint Commission or other accreditation organizations’ standards. Healthcare and emergency response entities should reference plans regarding decontamination, including:

- Local Plans: LEOPs, ESF #8 – Public Health and Medical
- Regional Plans: RCG, ESF #8 – Public Health and Medical Annex¹⁷
- Cleanup and Recovery

Cleanup and recovery are the final stage of the hazmat incident. Because the shipper, spiller, or owner is responsible for recovery and cleanup, hazmat teams and other emergency response personnel typically do not participate in this stage of an incident. Many times, contracted companies will conduct cleanup operations, including containment, disposal, and remediation activities. While cleanup and recovery follow emergency response, a cleanup contractor often requires time to arrive on the scene with the proper resources. For that reason, the Incident Commander must ensure: (1) the responsible party contacts an appropriate cleanup company as soon as possible, and (2) as much mitigation of the impact of the spill as possible before arrival of the cleanup contractor. If a responsible party has been identified that party bears legal responsibility for cleanup but may require assistance of Incident Command to ensure notification to the contracted company of capabilities that will be necessary. Similarly, tow and vehicle recovery companies should be contacted as early as possible to render timely services.

Cleanup operations should proceed under supervision of the appropriate authority. Typically, city or county environmental departments will collaborate with partner state agencies as needed to oversee cleanup efforts (chiefly KDHE and MoDNR). Responsibility for declaring the area affected by hazmat “safe” or “clean” varies based on the scope of the incident. In instances of small releases that are quickly managed, the Incident Commander may make this determination. In instances of larger or more complex incidents, the jurisdiction’s environmental personnel or KDHE/MoDNR representative will decide when this determination is appropriate.

¹⁷ <https://www.marc.org/Emergency-Services-911/MEMC/Other-Resources/Regional-Coordination-Guide>

5.5.2 Liability

Hazmat teams and/or other emergency response personnel shall not directly contact private cleanup/disposal companies. Responsible parties should be informed that they are financially responsible for cleanup and disposal of hazmat. If a responsible party cannot be identified or the release occurred on public property, the Incident Commander typically notifies the local jurisdiction of need for cleanup operations.

5.5.3 Cost Recovery

In the aftermath of a hazmat release, publicly managed emergency response agencies (e.g., local fire departments) are responsible for stabilizing and containing the incident to mitigate against further impacts on life, property, and the environment—even if compensation cannot be guaranteed. Certain direct costs associated with incident operations exceeding 48 hours may be eligible for reimbursement (e.g., labor, equipment rental or depreciation, insurance, material, fuel). Following conclusion of the incident will occur normal bidding procedures determined by the jurisdiction’s government administrative codes, and procedures for construction and demolition of local government projects. Below is a list of potential funding sources for hazmat incidents that may become available to local jurisdictions within the MARC Region.

In instances where the responsible party is identified as a non-publicly managed entity (e.g., regulated facility), the responsible party or designee will be responsible for assuming the costs associated with cleanup/remediation of the hazmat release.

5.5.3.1 State Funding Sources

- Missouri “Spill Bill”: Local fire departments and hazmat teams often respond to events involving release of a hazardous substance. Sections 260.500 through 260.550 (Spill Bill) of the *Revised Statutes of Missouri* include provisions for emergency responding agencies to recover cleanup costs associated with hazardous substance spills. The Spill Bill is accessible online.¹⁸
- In 2021, the State of Kansas passed a similar bill, KSA 65-171(v), that requires responsible parties to report the release of hazardous substances and conduct appropriate response actions. The bill¹⁹ also allows the State to establish reportable quantities for some hazmats and recover costs incurred by response agencies.

5.5.3.2 Federal Funding Sources

- The Oil Pollution Act of 1990 established the Oil Spill Liability Trust Fund. This fund provides assistance for oil spill cleanup. The National Pollution Funds Center (managed by the U.S. Coast Guard) and the Federal OSC will determine eligibility for this fund. Funds typically are available to federal OSCs for oil removal actions, including:

¹⁸ MDNR (2015, August). Missouri Spill Bill. Retrieved July 16, 2021, from <http://dnr.mo.gov/env/esp/spillbill.htm>

¹⁹ https://www.ksrevisor.org/statutes/chapters/ch65/065_001_0071v.html

- Containing and removing discharged oil from water and shorelines
- Preventing or mitigating a substantial threat of discharge of oil to water and shorelines
- Taking other necessary actions to prevent, minimize, or mitigate damage to the public health and welfare.
- Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) Hazardous Substances Response Trust Fund (Superfund). This fund provides assistance for cleanup of hazmat in general. Federal OSCs will determine eligibility for this fund.

5.5.3.3 Limitations

- The responsible party must be unknown, unwilling, or unable to adequately clean up release.
- Funds are available only for federally managed responses.
- Robert T Stafford Disaster Relief and Emergency Assistance Act, Public Law 93-288, as amended, 42 USC 5121-5207, and Related Authorities (“Stafford Act”):
 - Stafford Act funding may be available when the President declares an emergency or major disaster.
 - Funding requests flow from the state through FEMA. FEMA determines eligibility of such requests, which includes a determination that state/local resources cannot fulfill the given mission. Where ESF #10 assets/resources are requested, EPA is the primary agency for fulfilling such requests.
- ESF #10 funding typically includes a state cost share and may include a local cost share as well.

5.5.4 Reporting

5.5.4.1 After-Action Reports

Local agencies should develop after-action reports to document their activities during hazmat emergency response and recovery operations. Reports should evaluate incident response and management areas, including initial notification, dispatch, initial assessment, containment measures, scene management, hazmat operations, resource allocation, public warning and information, protective actions, and communications.

LEPC/LEPD meetings serve as a forum to review actual incidents, discuss areas for improvement, and share best practices for Level II and III incidents.

5.5.4.2 Follow-up Reporting

In accordance with SARA, Title III, Section 11004, and 11 CSR 10-11.230, any facility required to report release of a hazardous substance or EHS under the above codes shall also send written follow-up notices to MERC or CEPR, and LEPD or LEPC. Federal, state, and local agencies with regulatory, investigative, or prosecutorial responsibilities should compile information concerning the incident and its cause in an investigative report.

5.6 HAZARD MITIGATION

Hazard mitigation is an ongoing process to reduce or prevent risk to human life, property, and the environment from natural, human-caused, or technological hazards. Effective hazard mitigation actions must occur before an emergency.

The Missouri counties of Cass, Clay, Jackson, Platte, and Ray developed a Regional Multi-Hazard Mitigation Plan²⁰ that provides local governments and emergency responders an analysis of current conditions in each county, an assessment of hazards, and a description of mitigation strategies participating jurisdictions have undertaken.

The Kansas counties of Johnson, Leavenworth, and Wyandotte have developed individual hazard mitigation plans that are accessible on websites of the three counties:

- Johnson County Kansas Mitigation Plan²¹
- Wyandotte County Hazard Mitigation Plan²²
- Leavenworth County Kansas Hazard Mitigation Plan²³

Mitigation actions can occur as a single-purpose project undertaken within a limited period, as incremental actions over an extended period, or as part of a repair and restoration process following a disaster. Mitigation actions tend to be policy-oriented, and therefore involve elected officials to formulate local policy and enact appropriate ordinances and regulations that result in effective mitigation measures. Examples of mitigation activities include:

- Adoption of legislation or ordinances
- Improvement of facilities at risk
- Identification of hazard-prone areas and development of standards for prohibited/restricted use.
- Development of warning systems and population protection measures.

²⁰ MARC, Metropolitan Emergency Managers Committee (2020). Regional Hazard Mitigation Plan. Retrieved June 20, 2023, from https://marc2.org/assets/emergency/2020_regional_hazard_mitigation_plan.pdf

²¹ Johnson County, Kansas (2019). Region L Multi-Jurisdictional Hazard Mitigation Plan (2019-2024). Retrieved June 20, 2023, from <https://www.jocogov.org/dept/emergency-management/emergency-management-program/county-emergency-plans/mitigation-plan>

²² Wyandotte County, Kansas (2019). Region L Multi-Jurisdictional Hazard Mitigation Plan (2019-2024). Retrieved June 20, 2023, from <https://www.wyocok.org/Departments/Emergency-Management/Plans>

²³ Leavenworth County, Kansas (2019). Region L Multi-Jurisdictional Mitigation Plan. Retrieved June 20, 2023, from <https://www.lansing.ks.us/DocumentCenter/View/3406/2012-LV-Mitigation-Plan>

5.7 PLAN MAINTENANCE

The RHMEPP will be updated regularly to reflect hazardous materials vulnerabilities and hazard changes in the region. The respective Kansas and Missouri departments of emergency management will receive completed or updated versions of this plan for their review. Results of plan reviews and any subsequent updates, along with LEPC meeting summaries that document plan review, are to be submitted to KDEM (detailed LEPC meeting minutes may be submitted in lieu of written review results). The Missouri Urban Region A LEPD will submit a copy of the plan to MERC.

6. Resource Management

Additional details on available resources are in **Appendix H**.

6.1 GENERAL RESOURCE REQUEST PROCESS

Dispatch and coordination of initial emergency response proceeds through the local public safety answering point (PSAP) or local dispatch center. Initial first responders may include primary jurisdiction and mutual-aid fire department resources, hazmat team(s), law enforcement, and EMS. If the need for additional mutual aid increases, establishment of an incident command post (ICP) may occur to facilitate the resource request process according to local procedures (i.e., communication with the PSAP). Additionally, jurisdictions may activate their local or area EOCs to assist with resource management and other functions.

The region's emergency management officials utilize the software application WebEOC to increase awareness and facilitation of available regional resources. Many local jurisdictions and counties in Missouri use the WebEOC system operated by the Missouri State Emergency Management Agency. The City of Kansas City, Missouri (KCMO) operates its own stand-alone WebEOC system. The Missouri State and KCMO systems are integrated and can be utilized to request, process, and track resources during a disaster. KDEM operates a statewide WebEOC system, as do several other counties and jurisdictions within the MARC planning area. Leavenworth, Johnson, and Wyandotte Counties all operate individual WebEOC systems; Johnson County's WebEOC software also serves as a regional system for all jurisdictions and counties within the MARC area, which includes 119 cities and nine counties.

All local Kansas WebEOC systems are integrated with the Kansas statewide system. Additionally, the Kansas and Missouri statewide WebEOC systems are integrated. Each of these systems can be utilized to request, process, and track resources during a disaster.

Another resource tracking asset is the regional "Rapid Tag" system that can develop tags for specific equipment and has a database to track that information. Locations of this system are as follows:

- Independence Missouri Office of Emergency Preparedness
- Kansas City Fire Department
- Johnson County Kansas Emergency Communications Center

Hospitals in the MARC planning area use the EMResource system to track availability of hospital beds and emergency department capacity.

7. Public Information

Upon receipt of initial notification of an actual or suspected hazmat release, the local fire department assesses need for and coordinates with the local EOC (if activated) and other emergency response agencies/organizations to develop and disseminate pertinent information to community stakeholders (e.g., local businesses, schools, hospitals, media) and the public—in accordance with concepts outlined in the respective local Emergency Public Information plans and the ESF #15 Emergency Public Information Annex²⁴ of the Kansas City Metropolitan Area RCG. Additional hazmat-specific public information is in the ESF #10 Oil and Hazardous Materials Annex²⁵ of the Kansas City Metropolitan Area RCG.

There several public alert systems in the region that may be used to aid in alerting the public of an incident depending on the situation (see <https://preparemetrokc.org/regional-emergency-alert-systems/>). The public is encouraged to know which is available in their community and to participate in the program if able.

The following circumstances can facilitate effective dissemination of public information during a hazmat release:

- The public is well informed and thus better prepared to take appropriate actions during hazmat emergencies.
- As the incident progresses beyond the warning stage, the public is regularly updated as to the status of the emergency and its continued impact.
- Whenever possible, a joint public information effort including government agencies, nongovernmental organizations, and the affected facility clarify information released to the public and render that information consistent. A Joint Information Center (JIC) may be activated, if required.

As other response functions, conveyance of public information should be managed within ICS and as detailed in LEOPs. Each jurisdiction may establish public information capabilities differently depending on resource capabilities and requirements, but all should conduct the following core activities:

- Rapidly disseminate accurate information.
- Rumor control.
- Respond to media and citizen inquiries.

Pre-scripted public announcements templates for hazmat incidents are in **Appendix I**.

²⁴ MARC (2013, July 10). RCG, ESF #15 Emergency Public Information Annex. Retrieved July 16, 2019, from [https://www.marc.org/Emergency-Services-911/pdf/RCGESF-15-Emergency-Public-Info-\(2013\).aspx](https://www.marc.org/Emergency-Services-911/pdf/RCGESF-15-Emergency-Public-Info-(2013).aspx)

²⁵ Kansas City Metropolitan Area (2013). RCG, ESF #10 Oil and Hazardous Materials Annex. Retrieved July 16, 2019, from [https://www.marc.org/Emergency-Services-911/pdf/RCG_ESF10_Oil-and-Hazmat-\(2013\).aspx](https://www.marc.org/Emergency-Services-911/pdf/RCG_ESF10_Oil-and-Hazmat-(2013).aspx)

7.1 REGIONAL ASSOCIATION OF PUBLIC INFORMATION OFFICERS (RAPIO)

The Regional Association of Public Information Officers (RAPIO), is an organization that allows local Public Information Officers (PIO) opportunities to share information, work cooperatively on regional issues, and network with their peers during emergencies. For communities that require supplemental resources, PIOs operate in other cities and counties, as well as in state and federal partner agencies, private agencies, utilities, and special districts.

7.2 MEDIA ACCESS

7.2.1 Ground Access

In the event of a hazmat incident, the media's access to the scene will be dictated by the event and will be at the discretion of the Incident Commander. The media will be provided access to a safe location where information will be shared via scheduled briefings.

7.2.2 Air Access

Federal Aviation Administration Regulation (FAR) 91.137 covers temporary flight restrictions during incidents/disasters and sets forth procedures that pilots of media and other aircraft must follow. Permission to fly over incident sites may be denied if such flights would pose a significant safety hazard to the public or compromise management of the event.

Local officials may request temporary flight restrictions by contacting the Federal Aviation Administration (FAA) Regional Operations Center at (816) 426-4600.

7.2.3 Local Public Information Officers (PIO)

- The local government PIO organization may rely on several different communication methods for dissemination of information to the media, and for responses to direct public inquiry. The size and scope of the incident, as well as capabilities of the jurisdiction, will be factors in determining what methods are applied to alert the public. Possible methods include, but are not limited to:
 - Dissemination of information to all available media (broadcast radio, television, and cable access)
 - Dissemination of information to social media
 - Use of the Wireless Emergency Alert (WEA) system for targeted dissemination of information via cellular phones in a specific area or region (geofenced)
 - Activation of the Emergency Alert Systems (EAS) and/or Integrated Public Alert and Warning System (IPAWS)
 - Use of mobile public address systems
 - Use of mass electronic notification systems

- Use of devices and application of methods for individuals with disabilities
 - Door-to-door notifications.
- The PIO should ensure availability of adequate equipment resources to handle the number of inquiries (i.e., activate a call center, if needed).
- The PIO should anticipate that primary forms of communication may be inoperable due to the nature of the emergency. Redundant sources of communication should be considered, such as Amateur Radio Emergency Service (ARES).
- The local government may activate or request activation of local EAS stations following established EAS procedures.
- Local commercial radio is a rapid means of communicating emergency information to the public. However, as modes of communication evolve, agencies may have to consider additional ways to transmit key messages. Other means of communication include regional radio stations, television, and newspapers; special emergency information supplements to newspapers, social media, websites, leaflets, and public address systems; and personal contact.
- Some incidents may necessitate the establishment of hotlines or toll-free numbers to provide information to the public. Additionally useful may be 3-1-1 (Kansas City, Missouri), United Way 2-1-1, or other government-established hotlines.

8. Training and Exercise

8.1 TRAINING

The Regional Hazardous Materials and Emergency Preparedness Alliance through MARC maintains a standing training subcommittee that meets regularly, establishes a training budget, and maintains a calendar of hazmat courses. The subcommittee works with local agencies to ensure their personnel are trained to a level commensurate with their emergency responsibilities. The training offered focuses primarily on the region's hazmat teams, but the subcommittee works to provide courses pertinent to smaller local departments and those with volunteer personnel.

The subcommittee coordinates efforts with the Training and Exercise Subcommittee of the Regional Homeland Security Coordinating Committee (RHSCC). Courses from FEMA and the U.S. Department of Homeland Security concerning response to CBRNE-related incidents are offered through this committee and works closely with state training partners to ensure minimization of duplication and use of limited resources. The types and number of training courses may vary each year depending on available resources. The training subcommittee develops an annual work plan/schedule that focuses on provision of training opportunities in various subjects over the course of the calendar year. The LEPC, in conjunction with the Heart of America Fire Chiefs, develops the plan for hazmat training for the entire region. The Regional Training and Exercise Program calendar of courses is available online.²⁶

The training subcommittee promotes NIMS training to help local jurisdictions and community partners meet compliance requirements. NIMS training is incorporated on the yearly calendar at the website listed below. All hazmat training courses sponsored by the Mid-America LEPC comply with the requirements of CFR 1910.120, National Fire Protection Association (NFPA) 472 and 473, and/or other federal and state training requirements. Training partners include Missouri SEMA, KDEM, FEMA, University of Missouri Fire and Rescue Training Institute, and the Kansas Fire & Rescue Training Institute.

8.2 EXERCISE

Missouri Region A Urban LEPC and Kansas Mid-America LEPC participate in at least one hazmat exercise each year. The LEPC and LEPC meet the annual requirement to exercise this plan and the response to a hazmat incident by supporting its member agencies in planning and executing a hazmat exercise and/or by sponsoring their own exercise.

Local jurisdictions maintain varying exercise requirements. To maximize limited funding and allow for maximum participation, the LEPC and LEPC work closely with the Regional Homeland Security Training and Exercise Subcommittee to achieve regional exercise goals and objectives while avoiding duplication of efforts.

²⁶ MARC (2023, June). Training & Exercise. Retrieved June 21, 2023, from <https://www.marc.org/safety-security/emergency-services-and-homeland-security/emergency-services-training-and-exercises>

Exercises supported by the LEPC/LEPD may be discussion-based and/or operational. Exercises are designed to evaluate applicable local emergency response plans and facility response plans as appropriate. Lessons learned from after-action reports of these exercises help identify areas of improvement. Additionally, recognizing the benefits of lessons learned from actual incidents, the LEPC provides a forum for operational reviews of real events.

Direct questions regarding training and exercises supported by MARC, LEPC, and LEPD to the Emergency Services Training and Exercise Program Manager, Mid-America Regional Council, 600 Broadway, Suite 200, Kansas City, MO 64105 or (816) 474-4240.

9. Plan Maintenance

The HEPA Plans Subcommittee is responsible for updating and maintaining this plan. Reviews and updates to it occur annually or more frequently as changes in circumstances within the community or a facility require. Updates will be recorded in the Record of Amendments (at the front of this document).

Following each review/update of it, this plan will be re-submitted to the MERC and the CEPR. These organizations will examine the plan for consistency with SARA Title III, Section 303 and other plans, and may offer recommendations to the LEPC/LEPD Plans Subcommittee, as appropriate.

Appendix A: Stakeholder Contact Information List

REGIONAL HAZARDOUS MATERIALS

Regulated Facilities

Tier II Facility Emergency Coordinators

The table below lists Tier II facilities within the Kansas Mid-America Local Emergency Planning Committee (LEPC) planning area, as provided to Kansas Department of Health and Environment, which did not use/store an extremely hazardous substance (EHS) during the 2022 reporting period.

Table 23: Kansas Non-EHS Tier II Facility Emergency Contacts (2022)

Non-EHS Facility Name (Kansas)	Street	Town / City	Zip	County	24-hour Phone	E-Mail
Johnson County

Appendix B: Legal Authorities

STATUTES

Missouri

State, Regional, and Local Emergency Management Authorizations

- Title 11, Division 10, Chapter 11, *Missouri Code of State Regulations*, Department of Public Safety, Adjutant General, State Emergency Management Agency (11 CSR 10-11.010 to 11 CSR 10-11.250)
- Title 11, Division 20, Chapter 1, *Missouri Code of State Regulations*, State Emergency Management Agency (11CSR 20-1.060 to 11 CSR 20-1.250)
- Title III, Chapter 21, Joint Committee on Disaster Preparedness and Awareness, (RSMo Ch 21.851) (Expired 12-31-2022)
- Title V, Chapter 44, Civil Defense, Emergency Management Agency, (RSMo Ch 44.010 to 44.415)
- Title XVIII, Labor and Industrial Relations, Chapter 292, Hazardous Substances in the Workplace (aka, “Missouri Emergency Planning and Community Right-to-Know Act”) (RSMO Ch 292.600 to 292.625).
- Title XVI Conservation, Resources and Development, Chapter 260, Environmental Control, Hazardous Substance Cleanup (aka, “Spill Bill”) (RSMo Ch 260.500 to 260.550)
- Ordinances and regulations of local jurisdictions as documented in emergency plans.

Mutual Aid Response Authorizations and Professional Qualification Reciprocity Recognition

- Title V Military Affairs and Police, Emergency Management Agency, Emergency Mutual Aid Compact (RSMo Ch 44.415)
- Title V Military Affairs and Police, Emergency Management, Mutual Aid agreements, powers of arrest (RSMo Ch 44.091)
- Title XII Public Health and Welfare, Ambulance Services and Emergency Personnel, Licensing and Regulation, (RSMo Ch 190.107; and 190.900 to 190.939)
- Title XXI Public Safety and Morals, Fire Protection, Mutual Aid (RSMo Ch 320.090)
- Title V Military Affairs and Police, Emergency Management, Mutual Aid agreements (RSMo Ch 44.045, 44.090, 44.95, and 44.105) for fire, police, EMS, healthcare professionals

Kansas

State, Regional, and Local Emergency Management Authorizations

- KSA Chapter 48, Article 9, Militia, Defense and Public Safety, Emergency Preparedness, (KSA § 48-9-930), (accessed 02/19/2024) Establishing interjurisdictional response agency.
- KAR Agency 28, Department of Health and Environment, Emergency Planning and Right-to-Know (KAR 28-65-1 to 28-65-4) (3/36/21) Adopts federal EPA requirements for SARA II & EPCRA
- KSA Chapter 65, Article 57, Public Health, Emergency Planning and Community Right-to-Know (KSA § 65-5701 to 65-5733) (accessed 02/19/2024) Establishes state reporting standards and reporting requirements.
- Ordinances and regulations of local jurisdictions as documented in emergency plans.

Mutual Aid Response Authorizations and Professional Qualification Reciprocity Recognition

- KSA Chapter 48, Article 9a Militia, Defense and Public Safety, Interstate Emergency Management Assistance Compact (KSA § 48-9a01) (accessed 02/19/2024) Establishes Interstate Mutual Compact, recognizes state licensure and certifications.
- KSA Chapter 48, Article 9, Militia, Defense and Public Safety, Emergency Preparedness for Disasters (KSA § 48-950 to 48-958) (accessed 02/19/2024) Establishes intrastate mutual aid and reciprocity for state and local agencies.
- KSA Chapter 12, Article 16,117, Cities and Municipalities, Miscellaneous provisions, disaster assistance and liability immunities (KSA § 48-12-16,117) (accessed 02/19/2024)
- KSA Chapter 12, Article 29, Cities and Municipalities, Interlocal Cooperation (KSA § 12-2904) (accessed 02/19/2024) establishes provisions for intergovernmental disaster agreements, mutual aid agreements.
- KSA Chapter 48 Article 36, miscellaneous, law enforcement assistance (KSA § 48-3602) (accessed 02/19/2024) establishes law enforcement mutual aid authorities and liability immunity.
- KSA Chapter 65, Article 61, Public Health, Emergency Medical Services, interstate licensure recognition (KSA § 65-6158) (accessed 02/19/2024)
- KSA Chapter 65, Article 11, Public Health, Nurse Licensure Compact (KSA § 65-1166) (accessed 02/19/2024)
- KSA Chapter 80, Article 15, Townships, Fire Protection (KSA § 80-1517) (accessed 02/19/2024) Mutual aid authorization for townships.
- KSA Chapter 31, Article 8, Great Plains interstate fire compact (KSA § 31-801) (accessed 02/19/2024)

Federal

- Public Law 93-288, as amended by Public Law 100-707, The Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 USC 5170 et seq.) provides authority for response assistance under the Federal Response Plan, empowers the President to direct federal agencies to utilize their authority and resources to support state and local assistance programs, and provides a system for joint all hazard capability building at the federal, state, and local levels.
- Public Law 99-499, Superfund Amendments and Reauthorization Act of 1986 (SARA), which governs hazmat planning and community right-to-know.
- Title 42, of United States Government Code, Section 11001 et seq, SARA, Title III; also known as the "Emergency Planning and Community Right-to-Know Act of 1986."
- Title 40 of CFR, Part 68 (Risk Management Plan) and Parts 300, 310, 350, 355, 370, and 372 (Resource Conservation and Recovery Act [RCRA]).
- Public Law 101-615, Hazardous Materials Transportation Uniform Safety Act (HMTUSA), which provides funding to improve capability to respond to hazmat incidents.
- Public Law 96-510, Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), Section 104(i), 2 USC 9604(i) More popularly known as "Superfund," CERCLA was passed to provide the necessary general authority for federal and state governments to respond directly to hazardous substances incidents.
- Public Law 107-296: Homeland Security Act of 2002.
- Stafford Act: 44 CFR Section 206; emergency response.
- Emergency Management Assistance Compact (EMAC), Public Law 104-321; intrastate mutual aid.
- National Emergencies Act, Public Law 94-412, 90 Stat. 1255; presidential disaster declarations.
- Pandemic and All Hazards Preparedness Act, Public Law No. 109-417, 78-410; public health preparedness and response (U.S. Department of Health and Human Services [HHS] / Centers for Disease Control and Prevention [CDC]), public health emergency declaration.
- Public Readiness and Emergency Preparedness Act; declaration of immunity for claims related to medical countermeasures (HHS).
- Emergency Medical Service Compact National Agreement; EMS licensure reciprocity recognition.
- Nurse Licensure Compact National Agreement; Nurse licensure reciprocity recognition.

EXECUTIVE ORDERS AND DIRECTIVES

Missouri

- 87-5 – Establishing the Missouri Emergency Response Commission according to Title III of SARA, and the responsibilities of the Commission.
- 02-15 – Establishing the Missouri Homeland Security Panel.

Kansas

- Executive Reorganization Order No. 29, and KSA sections 65-5703, 65-5704, and 057-0021-K. The Kansas EPCRA provisions are in KAR 28.65.1 to 28.65.4.

Federal

- Presidential Decision Directive (PDD) – 39, 21; public health and medical.
- Homeland Security Presidential Directive (HSPD) – 5 required the creation of a National Response Plan (NRP) including the concept of the National Incident Management System (NIMS).
- HSPD – 8 required a national domestic preparedness goal, standardized mechanisms for delivery of federal assistance to local jurisdictions, and measurable actions to improve preparedness capabilities at all levels of government.
- Executive Order 12148, 44 Federal Register (FR) 43239; preparedness and response.
- Presidential Policy Directive (PPD) – 8; national emergency preparedness.
- National Incident Management System (NIMS); incident organization and management.
- National Response Framework (NRF) 3rd Edition; national all-hazards approach to coordinate emergency response through ESFs.

MUTUAL AID AGREEMENTS

Local communities have various mutual aid agreements in place to ensure availability of resources for incidents that may exhaust any one jurisdiction's capabilities. Fire departments across the region have mutual aid and automatic aid agreements with their local neighboring jurisdictions. Resources, such as fire department hazmat teams, are available to provide regional response coverage as needed.

Law enforcement agencies may have existing mutual aid policies in place for local and regional responses, and municipalities may have agreements for emergency coordination, resource management, and specialty resources (e.g., heavy machinery or traffic control).

Hospitals often have agreements to share resources and personnel during emergencies, including through regional assets and coordinating bodies. Mutual aid agreements may be in place through the Regional Health Care Coordination System (RHCS) Guide, Region A Healthcare Emergency Response Guide (HERG), Kansas City Metropolitan Medical Response System (KCMMRS) Plan, Mid-America

Regional Council Emergency Rescue (MARCER) Mass Casualty Incident (MCI) Plan, and Kansas Regional Hospital Plan — Northeast Kansas Region and Kansas City Metro Region.

Jurisdictions should refer to the Kansas City Metropolitan Area RCG, ESF Annexes, and additional plans available on the MARC website at www.marc.org/Emergency-Services-9-1-1/Plans for guidance and assistance.

Appendix C: Population Vulnerability, County

The following figures illustrate social vulnerability throughout the region by county, as well as locations of Tier II facilities that use/store extremely hazardous substances (EHS) and at-risk populations (i.e., hospitals, schools, managed care facilities) potentially impacted by a release of an EHS. Social vulnerability data was obtained from the Centers for Disease Control and Prevention (CDC) Social Vulnerability Index, <https://svi.cdc.gov/>, using 2020 census data.

Appendix D: Tier II Reporting Process

KANSAS TIER II REPORTING PROCESS

Tier II Reporting Information

The Section 312 Tier II form and appropriate fees are due March 1st every year. The following are instructions to file an annual Tier II report in the State of Kansas.

As of the 2021 reporting period, the Kansas Department of Health and Environment (KDHE) will no longer accept paper Tier II reporting application. Facilities will report using KDHE's web-based reporting application at <http://kansas.tier2online.com>.

User IDs and passwords will be issued only to facilities (not consultants) and will be limited to just one representative of the facility. To obtain a User ID and Password, email the request from the company's home domain to kdhe.rtk@ks.gov. User IDs and passwords cannot be issued over the phone. Include the following with your request:

- Company Name
- Company Mailing Address (if different than facility address)
- Company Contact Person Name
- Contact Person Email Address
- Telephone Number.

Note: Issued user IDs and passwords do not change year to year, but passwords may be changed at the facility's request (i.e., a change in personnel).

The website also allows generation of fee calculation worksheets (for each facility) and a certification letter, which must be mailed to our office with accompanying fees to complete reporting. Make checks or money order payable to the Kansas Department of Health and Environment. If paying by credit card, facilities must download the credit card payment form: <https://www.kdhe.ks.gov/1129/Right-to-Know-Regulations-Reporting>, and email it to kdsh.rk@ks.gov along with the certification letter and fee calculation worksheets. Site plans must still be submitted as a hard copy via mail. Local emergency planning committees (LEPC) and fire departments must receive a hard copy to fulfill their reporting obligations. The web application will generate hard copies of the Kansas Tier II reports for submission to local agencies. LEPC information can be obtained through the interactive map at: <https://kdem.maps.arcgis.com/apps/webappviewer/index.html?id=4ad622342ce8452f8bde6d589baf7fab>. Fire department addresses can be obtained by contacting the LEPC Chair or Emergency Manager in the county hosting the facility.

For answers to questions, contact the KDHE at (785) 296-1560, or email Michael Seastrom at michael.j.seastrom@kdhe.ks.gov or Marla Oestreich at marla.oestreich@ks.gov.

MISSOURI TIER II REPORTING PROCESS

Who Must Submit This Form

The owner or operator of a facility in Missouri where hazardous chemicals are used, produced, or stored must submit a Missouri Tier II Form if the facility holds a quantity of hazardous chemicals in an amount exceeding 10,000 pounds.

What Chemicals Must Be Reported

Any substance for which a facility must maintain a Safety Data Sheet (SDS) under Occupational Safety and Health Administration's (OSHA) Hazard Communication Standard is classified as a "hazardous chemical." Any "hazardous chemical" that a Missouri facility uses/stores in quantities of 10,000 pounds or more at any one time during the calendar year must be reported on a Missouri Tier II Form. Facilities or fueling stations that store the following quantities in below ground storage tanks are required to submit a Tier II report: diesel fuel in excess of 100,000 gallons; gasoline (all grades) in excess of 75,000 gallons. A partial list of hazardous chemicals is on the internet at "List of Lists for Extremely Hazardous Substances, <https://www.epa.gov/epcra/consolidated-list-lists>" but the simplest way to determine necessity for submittal of a Tier II Form is to note whether a safety data sheet (SDS) is required under the Occupational Safety and Health Administration (OSHA) and if quantities exceed 10,000 pounds.

Extremely Hazardous Substances (EHS), as specified in 40 Code of Federal Regulations (CFR) Part 355, must be reported on the Tier II form if a facility has on hand at any one time during the calendar year more than 500 pounds or the threshold planning quantity (TPQ), whichever is lower. To obtain a list of EHSs, contact the Missouri Department of Public Safety, Missouri Emergency Response Commission (MERC) at 573-526-9100 or go to the [Missouri Emergency Response Commission's Website](#).

Under Missouri law, explosives and blasting agents in amounts exceeding 100 pounds must be reported to the fire department within 24 hours of initial presence at a facility. If storage time extends beyond 15 days, these substances must be reported to the fire department, the Local Emergency Planning Committee (LEPC) / Local Emergency Planning District (LEPD), and the MERC via a Missouri Tier II form. This requirement does not apply to materials in transit provided that the transporter is following U.S. Department of Transportation (USDOT) regulations.

What Chemicals Are Excluded

Section 311(e) of Title III EPCRA excludes the following substances:

- Any food, food additive, color additive, drug, or cosmetic regulated by the Food and Drug Administration.
- Any substance present as a solid in a manufactured item to the extent exposure to the substance does not occur under normal conditions of use.

- Any substance to the extent it is used for personal, family, or household purposes, or is present in the same form and concentration as a product packaged for distribution and use by the general public.
- Any substance to the extent it is used in a research laboratory or a hospital or other medical facility under the direct supervision of a technically qualified individual.
- Any substance to the extent it is used in routine agricultural operations or is a fertilizer held for sale by a retailer to the ultimate customer. (This exclusion does not apply to one-time reporting of EHS under Section 302 of EPCRA.)

When to Submit This Form

Owners or operators of facilities with hazardous chemicals on hand in quantities equal to or greater than set threshold levels must submit Missouri Tier II forms by March 1st of each year. The information required must be reported to the MERC and the LEPC/LEPD within 60 days of initial presence of a new EHS at the facility at or above the TPQ (11 *Code of State Regulations* [CSR] 40-4.040 (1)). If any new hazardous chemical or EHS comes onto the site in a quantity sufficient to require reporting, an updated Missouri Tier II form must be submitted within 3 months (11 CSR 40-4.040 (1)(D)(2)).

The Missouri Emergency Response Commission (MERC) has adopted an electronic filing and payment system for completing Tier II reporting and fee payments (via credit card or E-check). The website to access this system is: <https://apps1.mo.gov/merc>. Through this portal, filers are able to send an electronic copy of their Tier II report to their local LEPC and registered fire departments at the same time as they file with MERC, for an additional fee. Filers are encouraged to utilize this portal. If users still have questions, they may contact MERC:

- Lana Nelson at 573-526-9249 or Lana.nelson@sema.dps.mo.gov
- Karen Eagleson at 573-526-9240 or Karen.eagleson@sema.dps.mo.gov

Assistance is available Monday through Friday from 08:00 am to 4:00 pm excluding state holidays. Additional information for compliance and, blank Tier II forms, and manual fee calculation sheets can be found at: <https://sema.dps.mo.gov/about/merc.php>.

Where to Send Your Completed Tier II

If a filer does not elect to utilize the MERC Optional Distribution to their LEPCs and local fire departments, they will still need to send (via email, fax, or hardcopy) a completed, signed Missouri Tier II form to each of the following organizations:

- The Mid-America Regional Council (MARC) vphillips@marc.org and mcheney@marc.org, or fax at: (816) 421-7758
- Local fire department

Penalties

Any owner or operator who violates any Tier II reporting requirements shall be liable to the United States for civil penalty of up to \$69,733 (Public Law 114-74, Bipartisan Budget Act of 2015) per day for each such violation. Each day a violation continues shall constitute a separate violation. Missouri law specifies an additional penalty of up to \$5,000 (RSMo 292.615) per day for failure to provide the type of information required on the Missouri Tier II form.

Appendix E: Hazardous Materials Incident Levels

Level I

A minor situation within the capabilities of first responders trained at the “operational” level. A Level I incident involves a release or possible release of a small amount of gas, liquid, or solid of a known (identified) hazardous material (hazmat). In addition, the agency on-scene has the expertise and proper equipment to safely mitigate the incident.

At a minimum, a command post and an exclusion zone should be established to address all incidents. Pipeline and Hazardous Materials Safety Administration’s (PHMSA) Emergency Response Guide should be referenced for specifications of initial isolation and protective action distances. The Incident Commander should restrict movement of personnel into the exclusion zone. Only personnel entering for a specific reason and donned in the proper level of protective equipment should be allowed.

An incident should be immediately upgraded to Level II for the release or potential release of an unknown or suspected hazmat.

Typical Level I incidents include the following situations:

- Minor leaks or spills from a 55-gallon drum, cylinders up to 1-ton capacity, bags, or packages
- Minor leaks or spills that can be handled with absorbent materials and resources readily available on site.
- Release of chemicals that do not produce an environment immediately dangerous to life and health (IDLH) or above the Lower Explosion Limit (LEL) of a product.
- Containers involved in an accident that have no visible damage.
- Chemical releases exerting minimal environmental impact that do not require outside resources.
- Leaking valves on containers that do not require immediate offload of product (PRD)
- Evacuations limited to a single intersection or building.
- No life-threatening situation from materials involved.
- Suspicious packages considered non-hazardous threat and substance.

Level II

These are incidents beyond the capabilities of an agency with jurisdictional responsibility and that require mitigation by a hazmat team—ranging from a small incident involving any amount of an unknown substance to a large incident involving multiple agencies and jurisdictions.

A Level II incident should be declared by the Incident Commander and the Initial Response Team if the incident involves enough gas, liquid, or solid of a known hazardous substance or any quantity of an unknown material that has been released or indicates potential for release.

A Level II incident should be declared for release of any quantity of a known solid or liquid toxic material in a critical public area or for release or potential release of any quantity of an unknown solid, liquid, or gaseous toxic material or suspected toxic material (all gases other than natural gas are considered toxic).

In a Level II incident, a formal and properly identified Command Post with a removed staging area, an Incident Safety Officer, and a Hazardous Materials Sector should be established. Control zones must be established and maintained as early as possible and evaluated and monitored throughout the incident. Localized evacuation may be necessary, and outside agencies should be notified.

Typical Level II incidents include:

- One or more 55-gallon drums, 1-ton cylinders, nurse tanks, totes, portable containers leaking considerable amounts of a known substance.
- A major, liquefied gas leak due to puncture, crack, or crease of a large tank where ignition sources are a real threat.
- Leaking containers, tank trucks, or railroad tank cars with a hazardous material on board whose structural integrity is in question.
- Train derailments involving railroad tank cars filled with hazmat with leaks that can be controlled by local hazmat teams.
- A vehicle or train fire involving hazmat or hazardous wastes that pose a serious threat of a boiling liquid expanding vapor explosion (BLEVE)
- Incidents involving a fatality or serious injury attributed to the hazardous substance.
- Evacuations of an apartment complex, city block, or large facility with many employees
- Chemical releases that pose a moderate threat to the environment that requires state agency involvement.
- A suspicious package with an unknown material that, due to location, is considered a credible threat. If upon identification of the substance it is declared a weapon of mass destruction (WMD) agent, the incident should be upgraded to a Level III incident. An incident involving non-hazardous substances should be downgraded to a Level I incident.

Level III

This includes any incident beyond the capabilities of the hazmat team and local resources. Duration of the incident may be quite lengthy and may necessitate large-scale evacuations. A Level III incident will involve multiple agencies and jurisdictions, as well as resources from the private sector (including chemical manufacturers) and voluntary organizations.

Examples of Level III incidents include:

- Large releases from tank cars, tank trucks, stationary tanks, or multiple medium containers
- Incidents involving large-scale evacuations that may extend beyond jurisdictional boundaries.
- Any spill, leak, or fire involving hazmat that has gone to greater alarms.
- Any incident beyond local capabilities and resources (including the hazmat team) to safely identify, contain, and mitigate.
- Train derailments involving railroad tank cars containing hazmat that require specialized resources to mitigate.
- Major leaks of compressed or liquefied gas cargo tanks or railroad tank cars caused by puncture or major structural damage.
- Suspicious packages that, due to location, identification of material as WMD agent, or verbal threat, require state and federal resources.
- Large-scale or catastrophic releases of hazmats (e.g., radiation, biological agents) that would likely include a Stafford Act Emergency Support Function (ESF) #10 activation.

Appendix F: Protective Action Checklist

The following checklist is intended as a reference only in determining whether evacuation and/or sheltering-in-place operations are appropriate during a hazardous materials (hazmat) emergency.

The information in this checklist is from the National Institute for Chemical Studies, *Protecting the Public in a Hazardous Material Emergency (Final Project Report)* (Charleston, West Virginia: University of Charleston, 1988, pp. 10-12). This information is used with the permission of the National Institute for Chemical Studies.

INITIAL ASSESSMENT

Is this incident an actual or potential threat to public health and safety? If "Yes" or "Uncertain," continue to evaluate the incident using this checklist.

Required Information

The following is necessary to evaluate the appropriateness of evacuation and/or shelter-in-place actions:

- Material(s) involved
- Population threatened
- Time factors involved
- Current and forecast weather conditions
- Ability to disseminate warnings and emergency public information
- Capabilities of emergency response organizations to contain, stabilize, and mitigate the emergency

Technical Assistance

Have technical experts (i.e., hazmat technicians/specialists, environmental health personnel, CHEMTREC, the manufacturer, facility representatives, etc.) been consulted and/or recommended actions?

Physical characteristics:

- State: Solid, Dust, Liquid, Gas
- Density: High, Low
- Vapor Pressure: High, Low
- Water Soluble? Yes/No
- Explosive or flammable? Yes/No
- Characteristics unknown? Yes/No

Health characteristics:

- Toxicity: High, Low, Irritant
- Type of hazard: Inhalation, Ingestion, Dermal
- Hazard is: Immediate (acute), Long-term (chronic)
- Hazardous residue? Yes/No
- Toxic combustion product? Yes/No
- Unknown hazard? Yes/No

Quantity:

Release factors:

- Contained, but offers potential for release. Yes/No
- Uncontained: Controlled, Uncontrolled
- Type of release: Continuous, Cloud, Pool, Vapor, Dust, Elevated, Ground-hugging
- Vapor is: Heated, Cool, Caused by fire

Location:

- Accessible? Yes/No
- Distance to public: feet/miles
- Material relative to public: Above, Below, Same level
- Vapor enhancements or obstructions:
- Nearby hazards? Yes/No

Meteorological Considerations

Impact on hazardous material(s) movement:

- Wind direction: (from N, E, etc.)
- Wind speed: MPH
- Wind gusty? Yes/No
- Rain? Yes/No
- Weather expected to change? Yes/No

Impact on emergency response capability:

- Roads: Open, blocked, traffic delayed
- Travel: Safe, dangerous
- Difference between outdoor and indoor temperatures:

Population Considerations

Population characteristics:

- Type: Residential, Institutional, Commercial, Industrial, Transient
- Density: High, Low, Mixed
- People are: Indoors, outdoors, near structures
- Population groups: Families, groups, individuals
- Different languages spoken? Yes/No Time Considerations

Time of incident:

- Day of week/time of day:
- Season: Holiday, tourist
- Rate of escalation or de-escalation of emergency:
- Release: Over, occurring, predicted
- Release is unknown or unlikely? Yes/No
- Rate of release: Rapid, slow
- Duration of release: Minutes/hours

Rate of movement of hazardous material:

- Rate is: Known, predicted, uncertain
- Movement of material is: Enhanced, obstructed
- Time until contact with populated area: Minutes/hours

Estimated time needed for protective action:

- Deploy emergency response personnel: Minutes
- Provide warning and emergency public information: Minutes

Evacuation Considerations

- Public mobilization and travel time: Minutes/hours
- Mobilization and travel time for special populations (handicapped, institutional, commercial, industrial, recreational): Minutes/hours

In-Place Sheltering Considerations

- Public response: Minutes/hours
- Response time for special populations: Minutes/hours
- Duration: Minutes/hours
- Time required for environmental monitoring, termination, and building egress: Minutes/hours

Communication Considerations

Communication with the public:

- Able to warn public, handicapped, institutions, transients, etc.? Yes/No
- Able to instruct public? Yes/No
- Able to update public and terminate response? Yes/No

Communication with emergency responders:

- Able to notify and deploy emergency responders? Yes/No
- Able to activate Emergency Alert System and/or contact media? Yes/No
- Total coverage of area? Yes/No
- Able to contact mutual aid? Yes/No

Resource Considerations

- Mobilize available or required specialized personnel and resources? Yes/No
- Able to mobilize existing or additional resources and personnel? Yes/No
- Able to obtain specialized resources or control equipment? Yes/No

Control the hazmat:

- Able to prevent, limit, contain, direct and/or neutralize the release? Yes/No

Control an evacuation:

- Evacuation plan available? Yes/No
- Road capacity adequate? Yes/No
- Enough personnel and vehicles? Yes/No
- Able to move handicapped, institutionalized, and/or transient people? Yes/No
- Are reception and care facilities available for evacuees? Yes/No

Control in-place sheltering:

- Structures available? Yes/No
- Is public knowledgeable and willing to accept instructions? Yes/No
- Able to initiate and terminate? Yes/No
- Are institutions, commercial buildings, and industries prepared? Yes/No

PROTECTIVE ACTION SELECTION AND IMPLEMENTATION

Review the items marked on this checklist, noting the factors involved in this emergency (some factors are more important than others).

- Determine if evacuation, sheltering-in-place, or a combination of the two is appropriate.
 - Evacuation
 - Shelter-in-Place
 - Both
- Implement evacuation and/or in-place sheltering actions.
- When appropriate, terminate evacuation and/or in-place sheltering actions.

Appendix G: Notification of Release Form

KANSAS NOTIFICATION OF RELEASE FORM

Figure 29: Sample Kansas Notification of Release Form, Page 1

FORM A

Hazardous Materials Incidents / Accidents / Continuous Releases

REPORT INCIDENT IMMEDIATELY to the KANSAS DIVISION OF EMERGENCY MANAGEMENT (KDEM)

Telephone: (785) 291-3333

THIS COMPLETED FORM must be submitted on-line or faxed to KDEM (785) 646-2001, Technological Hazards Section, AS SOON AS PRACTICABLE (not to exceed 7 days) after the verbal notification. Form A(s) may be used as the written follow-up notification to KDEM **ONLY IF** an UPDATED Form A is submitted after the incident has concluded and includes additional information on the cause of the release, information on actual response actions taken, identification of any acute or chronic health risks and advice regarding medical attention necessary for citizens exposed, if appropriate. Additional information can be mailed to KDEM at: 2800 SW Topeka Blvd, Topeka, KS 66611.

- The following fields may have multiple entries: Commodity, Physical Form, Incident Mode, Truck/Trailer Number, Railcar Number, and Placard. If there is not enough room on this form to report these fields or "What Happened" or "Actions Taken to Remediate the Incident" please attach another page with the additional details.

SPCC Spill Prevention, Control, and Countermeasures Follow-up reports are only required for SPCC facilities if there is a single discharge of >1,000 U.S. gallons, or two or more discharges each >42 U.S. gallons within 12 months. Send written report to the EPA Region 7 Administrator within 60 days of incident. For more information, see: www.epa.gov/oil-spills

Appendix H: Hazardous Materials Resources

It may be necessary for responding agencies to use specialized resources (e.g., equipment or personnel) to manage a hazmat (hazmat) incident. These resources may be maintained by regulated facilities and other responsible parties, provided through local emergency response agencies or local mutual aid agreements, procured, or contracted through private vendors, or made available through state/federal agencies or through the statewide mutual aid systems. Additional information is available in the Kansas City Metropolitan Area Regional Coordination Guide Resource Annex.

EPCRA REGULATED FACILITIES

A survey of Tier II facilities using/storing extremely hazardous substances (EHS) in the region was conducted to assess their capabilities of providing resources such as technical staff, equipment, or disposable assets to emergency service agencies. Some larger chemical facilities within the Mid-America Regional Council's (MARC) planning area (which covers the counties with the Kansas LEPC and the Missouri LEPD) indicated they could support off-site response operations with technical consulting services, spill response equipment, leak kits, etc., but would require some type of agreement outlining workers compensation, equipment insurance, and methods of reimbursement to cover costs.

Although no formal agreements or resource-sharing plans have been established with these facilities by public safety agencies, prior knowledge of these potential resources will lead to future development of these agreements outlining activation, deployment, cost, and availability of these resources in the community before they are needed. The following in-house response capabilities, equipment, and services were reported as available by the Tier II facilities within the MARC region should resource-sharing agreements be developed.

Table 50: EPCRA Facility Hazardous Material Resources

Resource Category	Resource Type
<p style="text-align: center;">Equipment</p>	<ul style="list-style-type: none"> ▪ Self-Contained Breathing Apparatus (SCBA) ▪ Chemical Protective Suits ▪ Unmanned Fire Monitors ▪ Foam Deployment Systems ▪ Leak Mitigation Kits (conventional and specialized) ▪ Firefighter Gear (bunker gear) ▪ Portable Gas Detectors ▪ Booms & Pigs ▪ Chemical Storage (above and underground tanks) ▪ Chemical Transport Equipment ▪ Portable Generators ▪ Chemical Pumps and Hoses ▪ Foam Bank ▪ Decontamination Solutions ▪ Peatsorb and Bulk Floor Dry ▪ Firefighting Equipment ▪ Radios ▪ Computers ▪ WebEOC Software ▪ Pagers ▪ Plume Modeling Software ▪ Mass Notification Software ▪ Chemical Surveillance Detectors ▪ Chemical Lab Testing Equipment ▪ Cameo/Marplot Software
<p style="text-align: center;">Personnel</p>	<ul style="list-style-type: none"> ▪ HAZWOPER ▪ First Aid ▪ Incident Commander ▪ Hazardous Materials Awareness ▪ Hazardous Materials Operations ▪ Hazardous Materials Technician ▪ Chemists ▪ Confined Space Rescue ▪ Chemical Engineers ▪ Certified Health & Safety Managers ▪ Mechanical Engineers ▪ Industrial Hygienists ▪ Hazardous Materials Specialists

LOCAL EMERGENCY SERVICE AGENCIES

Within the MARC region, various local emergency service agencies/organizations (e.g., law enforcement, fire, emergency medical services) can provide specialized equipment and personnel to support hazmat response operations. The following table outlines the types of resources that may be available through these local emergency service agencies.

Table 51: Local Emergency Service Hazmat Resources

Resource Location/Agency	Resource Type	Resource Capability
Kansas City Fire Department (Missouri)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ (Equipped and trained to handle all unknown industrial chemical hazards in liquid, aerosol, powder, solids and vapor/gas forms.) ▪ Weapons of Mass Destruction (WMD)
Lee’s Summit Fire Department (Missouri)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD
Tri-District Hazardous Materials Response Team (HMRT) - Central Jackson County, Fort Osage, Sni Valley Fire Protection District (Missouri)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD/CBRNE ▪ Metropolitan Medical Response System (MMRS) MCI-WMD Trailer
Independence Fire Department (Missouri)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD
Kansas City Fire Department (Kansas)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD
Leavenworth Fire Department (Kansas)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD
Overland Park Fire Department (Kansas)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2 ▪ WMD
Olathe Fire Department (Kansas)	Hazmat Entry Team	<ul style="list-style-type: none"> ▪ FEMA Type-2

Notes:

- CBRNE Chemical, biological, radiological, nuclear, and explosive
- MCI Mass-casualty incident
- FEMA Federal Emergency Management Agency
- WMD Weapons of mass destruction

Local emergency management agencies and hazmat teams in the region maintain information regarding the resources available in their individual jurisdictions. This information is included in local plans and in supporting documents (i.e., procedures, checklists, guidelines, operating manuals) maintained by first responders.

Hazmat Teams

Eight hazmat response teams are available in the MARC region, including seven with enhanced weapons of mass destruction (WMD) response capabilities. Enhanced hazmat teams meet U.S. Department of Homeland Security Type 2 Hazmat Entry Team standards. Each team can perform field-testing, air sampling and collection of known or suspected WMD agents or other chemicals; to detect and monitor for radiation sources; capable of stopping the release of WMD agents and other hazardous substances; to decontaminate equipment, personnel, and citizens; and personnel are trained to applicable standards associated with hazmat response activities.

Additionally, the Federal Bureau of Investigation (FBI) regional office(s) maintain a hazmat response team, as well as the Civil Support Teams (CST) from the Missouri National Guard (7th CST) and Kansas National Guard (73rd CST).

Hazmat teams can be requested through mutual aid. The process for accessing hazmat team resources is outlined in Emergency Support Function (ESF) #10 Oil and Hazardous Material Annex of the Kansas City Metropolitan Area Regional Coordination Guide.

REGION VII RESOURCES

Region VII Cybersecurity and Infrastructure Security Agency (CISA) has improved the delivery of services to critical infrastructure owners and operators and state, local, tribal and territorial partners, and enhancing support to existing Infrastructure Security Division (ISD) field staff by relocating administrative, logistical, and regional operations capabilities to Region VII. The functions include efforts such as coordinating training and exercises for regional stakeholders; developing internal IP regional plans and participating in external planning with regional partners; providing advice and expertise to regional stakeholders on information protection, ISD data tools, sector specialties, resilience and recovery; and providing mission support during steady-state, special events, and incident response.

The CISA regional office staffs a cadre of specialized personnel, including [Infrastructure Security Division Protective Security Advisors](#), [Chemical Facility Anti-Terrorism Standards Chemical Security Inspectors](#), [Cybersecurity Division Cyber Security Advisors](#), [Emergency Communications Division Coordinators](#), and visiting Cybersecurity and Infrastructure Security Agency personnel. For Region VII office specific information, contact the Region VII CISA Office at: CISARegion7@hq.dhs.gov.

OTHER PUBLIC RESOURCES

In addition to the hazmat teams, other regional resources include specialized equipment and teams for response to a variety of emergency incidents. Regional resources include communications equipment, command vehicles, heavy rescue teams, WMD mass-casualty incident medical trailers, and other vehicles. For more information on the all-hazard resources and capabilities available in the region, see the ESF #7 Logistics Management & Resource Management Annex of the Kansas City Metropolitan Area Regional Coordination Guide. A variety of state and federal resources and technical assistance may be available to local officials from agencies tasked with responsibilities in state and federal plans.

The following is a list of selected state and federal hazmat response special teams/resources that may be available through the United States Environmental Protection Agency (EPA) and EPA Federal On-Scene Coordinators (OSC):

- Agency for Toxic Substances and Disease Registry (ATSDR) Emergency Response Teams
- Department of Energy Nuclear Emergency Support Team
- United States Environmental Protection Agency
 - Environmental Response Team (ERT)
 - Region 7 Regional Response Team (RRT)
 - Office of Enforcement, Compliance, and Assurance, National Counter-terrorism Evidence Response Team (NCERT)
 - Radiological Emergency Response Team (RERT [EPA])
 - Diving Program
 - Emergency Communications and Outreach Team
 - Emergency Response Peer Support and Critical Incident Stress Management (Peer Support/CISM) Team
- Federal Bureau of Investigation (FBI)
 - Omaha, Nebraska Regional Office, Hazmat/WMD Expert
 - Kansas City, Kansas Regional Office
 - Laboratory Division, Hazardous Materials Response Unit (HMRU)
- National Oceanic and Atmospheric Administration Office of Response and Restoration (NOAA OR&R) Hazardous Materials Response Division
- Occupational Safety and Health Administration Health Response Team (OSHA HRT)
- Department of Defense
 - Joint Director of Military Support
 - United States Navy Supervisor of Salvage and Diving (SUPSALV)
 - United States Army Corps of Engineers Rapid Response Program (USACE RR)
 - U.S. Marine Corps Chemical Biological Incident Response Force (CBIRF)

- Department of Homeland Security
 - Federal Emergency Management Agency, Metropolitan Medical Response System (MMRS)
 - United States Coast Guard
- National Pollution Funds Center (NPFC)
- United States Coast Guard National Strike Force (NSF) – Atlantic Strike Team
- United States National Guard Civil Support Teams (USNG CST)
 - Missouri National Guard (7th CST)
 - Kansas National Guard (73rd CST)

MUTUAL AID

Mutual aid is designed to ensure adequate resources; facilities and other support are provided to jurisdictions whenever their own resources prove inadequate to address rescue, relief, evacuation, rehabilitation and/or recovery associated with an emergency or disaster. Mutual aid agreements should be in place before an incident occurs. Several are in place within the region between response partners and neighboring jurisdictions.

Missouri

The Missouri Mutual Aid System is authorized under Section 44.090.1 of the Revised Statutes of the State of Missouri (RSMo). This statute describes participation by local jurisdictions in a statewide mutual aid system. This statewide fire mutual aid system is called the Missouri Systems Concept of Operational Planning for Emergencies (MoSCOPE). MoSCOPE provides a basis for command and management for any type of response. The use of MoSCOPE provides common principles giving local responders reasonable expectations, whether requesting or lending assistance.

Kansas

The Kansas Statutes and Authorities (KSA) authorize Kansas mutual aid assistance (including the provision of firefighting capabilities) 48-950. The Kansas mutual aid system allows all political subdivisions in the state to lend mutual aid assistance upon request. All political subdivisions in the state are automatically part of the Kansas mutual aid system unless they elect not to participate or to later withdraw by formal adoption of an appropriate resolution by its governing body.

National

The Emergency Management Assistance Compact (EMAC) is a national interstate mutual aid agreement that enables states to share resources during times of disaster. EMAC acts as a complement to the federal disaster response system, providing timely and cost-effective relief to states requesting assistance from assisting member states who understand the needs of jurisdictions that are struggling to preserve life, the economy, and the environment. EMAC can be used in lieu of federal assistance or in conjunction

with federal assistance, thus providing a seamless flow of resources and services to an impacted state. EMAC further provides another venue for mitigating resource deficiencies by ensuring maximum use of all available resources within member states' inventories. EMAC is activated at the state level and resources requests are made through the state's emergency management agency.

PRIVATE SECTOR

Within the MARC planning area, various private sector organizations can provide specialized equipment and personnel to support hazmat response and recovery operations. Table 51 outlines the types of resources that may be available through private sector organizations.

Table 52: Private Sector Hazmat Resources

Resource Location/Agency	Resource Type	Resource Capability
CC EnviroKlean, Inc (Kansas City, KS)	USCG-classified Oil Spill Removal Organization (OSRO)	Emergency response for oil spills, boom, diking/damming, vacuum trucks, frac tanks, heavy equipment, and tankers with personnel
Environmental Works, Inc. (Kansas City, MO)	USCG-classified OSRO	Emergency response for oil spills, boom, diking/damming, vacuum trucks, frac tanks, heavy equipment, and tankers with personnel
ESI Contracting Corps. (Kansas City, MO)	USCG-classified OSRO and Hazardous Materials Containment and Remediation	Emergency hazmat and oil spill response, confined space, air monitoring, soil remediation, heavy equipment and vacuum trucks, hazmat waste, and portable liquid storage
Haz-Mat Response, Inc. (Olathe, KS)	Hazardous Materials Containment and Remediation	Emergency hazmat spill response, confined space, air monitoring, soil remediation, heavy equipment and vacuum trucks, hazmat waste, and portable liquid storage

CHEMTREC

CHEMTREC is a 24/7 emergency call center that provides immediate critical response information during emergency incidents involving chemicals, hazmat, and other dangerous goods. CHEMTREC administers the CHEMNET program, which is a network of for-hire contractors for CHEMTREC registrants who may need the services of an emergency response contractor at the scene of an incident involving their product. CHEMNET industry members also offer mutual aid to other chemical companies through provision of emergency and technical information. The CHEMNET list is a resource for shippers, carriers, and others that require the services of a contractor for response to an incident involving hazmat. Upon request, CHEMTREC can link the shipper with the CHEMNET contractor closest to the incident site. CHEMTREC can also link medical personnel at the emergency room with medical specialists from the shipper. Additionally, several contract emergency response companies that may be available to provide assistance and resources (i.e., Haz-Mat Response Inc., Heritage, Veolia, Clean Harbors).

Plan Bulldozer

“Plan Bulldozer” is a regional mutual aid agreement with heavy constructors/contractors in the metropolitan area. Plan Bulldozer describes the types of heavy equipment resources potentially available to local jurisdictions and provides 24-hour contact information for accessing these resources. The Greater Kansas City Heavy Constructors Association (HCA) and the Kansas City Chapter of the Associated General Contractors of America perform the compilation and publication of the plan’s Emergency Resource Catalog. The plan is accessible at: <https://kcheavyconstruction.com/plan-bulldozer/> (login required).

The following steps are necessary to utilize “Plan Bulldozer”:

1. Establish an MOU between the local jurisdiction and the Association.
2. The requesting party (governmental agency) notifies the Association that a disaster has occurred and indicates that the jurisdiction does not have the specialized equipment necessary to alleviate the situation.
3. As soon as practicable, an Association Command Center is established to process requests for aid. In turn, the jurisdiction collects, evaluates, and prioritizes all requests and disseminates them in writing to the Association’s Command Center from its EOC or any other location designated for collection and processing of requests.
4. Upon receipt of the information by the Association’s Command Center, the requests for assistance are submitted to the participating contractors.
5. Depending upon the situation, communications are established between the responsible jurisdiction’s Departments or Divisions and the participating contractor to exchange all pertinent information for fulfillment and coordination of specific projects.
6. This process continues until the crisis phase of a “disaster” has passed, as determined in writing by the jurisdiction.
7. After the crisis has passed, the Association no longer has to maintain the Communications Center, and all requests for construction and demolition work proceed through the normal “sample jurisdiction” contractual bidding procedures.
8. After the termination of the crisis and as soon as practicable, the participating contractors provide all information about costs incurred during response operations to the jurisdiction that submitted the requests for aid.

Appendix I: Pre-Scripted Messaging

The following pre-scripted message templates are intended to assist public safety organizations in the region with timely dissemination of public information and warning regarding several types of hazmat incidents.

UNIDENTIFIED HAZARDOUS MATERIALS INCIDENT

“This is (name of agency) An unidentified substance which may be hazardous has been (spilled/released) at (location). Please avoid the area, if possible, while crews are responding. The best alternate routes are (list routes). If you are already in the area, please be patient and follow the directions of emergency response personnel. The substance will be evaluated by specially trained personnel and further information will be released as soon as possible. Thank you for your cooperation.”

LOW-RISK HAZARDOUS MATERIALS INCIDENT

“This is (name of agency). A small amount of (name of chemical or material), a hazardous material, has been (spilled/released) at (location). Streets are blocked, traffic is restricted, and authorities have asked residents in the immediate area to evacuate or shelter-in-place. Please avoid the area. The material is (slightly/highly) toxic to humans and can cause the following symptoms: (symptoms). If you think you may have come in contact with this material, you should (provide health instructions and hotline number, if available). For your safety, please avoid the area. Alternate routes are (routes) and traffic is being diverted. If you are now near the spill/release area, please follow the directions of emergency response personnel. Clean-up crews are on the scene. Thank you for your cooperation.”

HIGH-RISK HAZARDOUS MATERIALS INCIDENT (EVACUATION MANDATORY)

“This is (name of agency). A (large/small) amount of (name of chemical or material), a highly hazardous substance, has been (spilled/released) at (location). Because of the potential health hazards, authorities are (requesting/requiring) all residents within (number of blocks/miles) of the area to evacuate. If you are within (evacuation zone boundaries), you and your family (should/must) leave (as soon as possible/now) Go immediately to the home of a friend or relative outside the evacuation area or to (indicate shelters). If you can drive a neighbor who has no transportation, please do so. If you need transportation, call (provide telephone number). Children attending the following schools: (list schools) will be evacuated to (location). Please do not drive to your child’s school. Pick your child up from school authorities at the evacuation center. Listen to this station for further instructions. The material is highly toxic to humans and can cause the following symptoms: (symptoms). If you are experiencing any of these symptoms, seek help at a hospital outside the evacuation area, or at the evacuation center at (location). To repeat, if you are in the area of (location/boundaries), you (should/must) leave for your own safety. Do not use your telephone unless you need emergency assistance. Thank you for your cooperation.”

HAZARDOUS MATERIALS INCIDENT: SUMMARY STATEMENT FOR MEDIA

“At approximately (time a.m./p.m.) today, a (spill/release) of potentially hazardous material was reported to this office. Emergency services personnel were immediately dispatched to cordon off the area and direct traffic. The material was later determined to be (name of chemical or material), a (hazardous/harmless) (chemical/material/gas) which, upon contact, may produce symptoms of (list symptoms). A precautionary evacuation of the (location) area surrounding the spill was (requested/required). Approximately (number) of persons were evacuated. Clean-up crews from (agency/company) were dispatched to the scene, and normal traffic had resumed by (time), at which time residents could return to their homes. There were no injuries reported – OR – (number) persons, including (number) of emergency personnel, were treated at area hospitals for (injuries/symptoms) and (all/number) were later released. Those remaining in the hospital are in (condition, i.e., serious, critical, etc.) condition. Response agencies involved were (list agencies).”

Appendix J: Hazmat Response Resource Guide

REGIONAL HAZMAT ACTION PLAN

Purpose

The purpose of this document is to provide first responding agencies and stakeholders with: (1) a comprehensive set of actions to support hazardous materials (hazmat) response operations in the Kansas City Region and (2) regional resources and expertise that may be available to support responding agencies during a hazmat incident. “Key Actions and Operations” listed in Table 52 are provided as general guidance and may not be applicable in every situation. Responding agencies should defer to local policies and procedures based upon needs to protect life, health, property, and the environment.

Note: Requests for hazmat response resources/personnel should be made to the appropriate state agency(ies). States will contact federal agencies listed as “Regional Resources” to address outstanding resource gaps, as warranted.

Table 53: Regional Hazmat Resources

Key Actions and Operations	Regional Resources	Considerations
Firefighting / Hazardous Materials (Hazmat)		
Regional Coordination Guides (RCG): Emergency Support Function (ESF)-4 and ESF-10		
Approaching the Scene	Not Applicable (N/A)	Upwind, uphill, and upstream
Arriving at the scene, establish command	Fire Departments (Regional Hazardous Materials Emergency Preparedness Plan [RHMEPP]: Appendix A – Stakeholder Contact Information List)	First arriving unit established the Incident Command System (ICS)
Recognition that Hazmat resources are needed	Fire Departments (RHMEPP: Appendix A – Stakeholder Contact Information List)	Use of Emergency Response Guidebook (ERG), placards, etc.
Initial chemical identification utilizing placards or other visible markings	N/A	Emergency Response Guidebook (ERG)
Identify Hazmat Priorities	N/A	Life Safety, Incident Stabilization, Property, Environment
Identify Hazmat Objectives: Analyze, Plan, Implement, Evaluate	N/A	Incident Commander (IC) / Unified Command (UC)
Site Characterization – Oil Spill <ul style="list-style-type: none"> · Air - Monitoring & Sampling · Soil - Monitoring & Sampling · Surface Water - Monitoring & Sampling · Ground Water - Monitoring & Sampling 	United States Environmental Protection Agency (EPA) National Oceanic and Atmospheric Administration (NOAA)	Placards, manifest, and bill of lading depending on the size of the incident consider federal assets to assist

Key Actions and Operations	Regional Resources	Considerations
Site Characterization- Chemical- Commercial <ul style="list-style-type: none"> Air - Monitoring & Sampling Soil - Monitoring & Sampling Surface Water - Monitoring & Sampling Ground Water - Monitoring & Sampling 	EPA and EPA ERT Agency for Toxic Substances and Disease Registry (ATSDR)	Placards, manifest, and bill of lading depending on the size of the incident consider federal assets to assist
Site Characterization – Chemical Warfare Agent <ul style="list-style-type: none"> Air - Monitoring & Sampling Soil – Monitoring & Sampling Surface Water - Monitoring & Sampling Ground Water – Monitoring & Sampling 	EPA, EPA ERT, and EPA Chemical, Biological, Radiological, and Nuclear (CBRN) Consequence Management Advisory Team (CMAT) Federal Bureau of Investigation (FBI), Hazardous Materials Response Unit (HMRU) ATSDR	Placards, manifest, and bill of lading depending on the size of the incident consider federal assets to assist
Site Characterization – Biological Agent <ul style="list-style-type: none"> Air - Monitoring & Sampling Soil – Monitoring & Sampling Surface Water - Monitoring & Sampling Ground Water – Monitoring & Sampling 	EPA, EPA ERT, and EPA Chemical, Biological, Radiological, and Nuclear (CBRN) Consequence Management Advisory Team (CMAT) Federal Bureau of Investigation (FBI), Hazardous Materials Response Unit (HMRU)	Placards, manifest, and bill of lading depending on the size of the incident consider federal assets to assist
Site Characterization – Radiological <ul style="list-style-type: none"> Air - Monitoring & Sampling Soil – Monitoring & Sampling Surface Water - Monitoring & Sampling Ground Water – Monitoring & Sampling 	EPA Radiological Emergency Response Team (EPA RERT) Department of Energy Nuclear (DOE) Nuclear Emergency Support Team (NEST)	Placards, manifest, bill of lading Depending on the size of the incident consider Federal assets to assist
Identify needs for branches/functions: Hazmat Operations, Safety Officer, Medical, Rehab., and Public Information Officer (PIO)	RHMEPP Appendix A – Stakeholder Contact Information List	
Identify the need for, and initiate as appropriate Hazmat Equipment Officer	RCG ESF-10	Identify equipment support required for hazmat teams
Initiate Offensive Measures, as appropriate	N/A	
Identify need for Hazmat Entry Team, if so also identify and initiate a backup team	RCG ESF-10 Note: Multiple enhanced hazmat teams exist in the region	
Initiate Containment and Control actions	N/A	Prevent incident from expanding
Initiate detection and monitoring, as appropriate	RCG ESF-10	Chemical-Biological- Radiological- Nuclear- Explosive (CBRNE) monitoring
Obtaining hazard and handling information	RHMEPP: Appendix A – Stakeholder Contact Information List	

Key Actions and Operations	Regional Resources	Considerations
Establish Decontamination (decon)	RCG ESF-10 (Mass Decon Trailer) RCG ESF-8 – Public Health and Medical	Establish decon line if PPE is required on scene
Identifying key expertise	RHMEPP: Appendix H Hazardous Materials Resources - Eight Regional HazMat Teams, including Kansas City Missouri Fire Department Chemist	Leverage industry subject matter experts (SME) and the Chemical Transportation Emergency Center (CHEMTREC)
Establish reentry criteria and process	N/A	Post incident operations, identify priorities for business reentry and then residential reentry. Verify that business and residence live or work in the area prior to allowing access to a limited access area post incident.
Comply with OSHA regulations	N/A	
Cleanup and disposal	RCG ESF-10 RHMEPP: Appendix A – Stakeholder Contact Information List	When possible, work with Hazmat vendor for cleanup and disposal. See utilities below.
Dispatch - Alert and Warning		
Coordination of responding units	Public Safety Answering Points (PSAP) / Dispatch	
Establish a common working channel for on scene operations	PSAPs and Communication Unit Leaders	As appropriate and as requested by the Hazmat IC, establish a Command Channel, Hazmat Tactical Channel, etc.
Identify if the assignment of a tactical dispatcher is required	Public Safety Answering Points (PSAP)/Dispatch	Tactical dispatcher may be at the dispatch center or for large scale incidents can be forward deployed as part of a tactical dispatch team
Assist in establishment of a perimeter as requested by first arriving unit, Hazmat, or the Incident Commander	Dispatch deploys resources to perimeter	
Assist in mass notification and alerting	Metropolitan Emergency Management Committee (MEMC) and Regional Association of Public Information Officers (RAPIO)	
Activate Emergency Alert System or Integrated Public Alert & Warning System (IPAWS) as requested	IPAWS	
Provide weather updates as available and appropriate	National Weather Service Forecast Office	

Key Actions and Operations	Regional Resources	Considerations
Law Enforcement (RCG ESF-13 – Public Safety and Security)		
Approaching the scene	N/A	Up wind, Up Hill, Up Stream
Arriving at the scene, establish Command, unified command or supporting role	N/A	Establish command until Fire or Hazmat arrive then transfer command
Recognition that Hazmat resources are needed	N/A	First arriving law enforcement (if arriving prior to fire department or Hazmat): use ERG, placards, etc.
Ensure that law enforcement operations are established outside of the hot zone	N/A	
Establish initial perimeter	N/A	For initial perimeter, bigger is always better
Support Hazmat Incident Commander with information and intelligence gathering if requested and as appropriate	N/A	Vehicle, building, subject background information and identification
Notify Fusion Center (Information Sharing) if suspected WMD/CBRNE incident is deliberate in nature or if there is a suspected act of terrorism	Kansas City Regional Fusion Center	
If a crime or act of terrorism is suspected request a crime scene unit to respond to document the scene.	RHMEPP: Appendix A – Stakeholder Contact Information List	Photograph not only the scene but also anyone that is watching the scene. Still and video photography can assist follow up investigative actions.
Door-to-Door evacuation notifications	N/A	Door to door notification to evacuate if requested by the Hazmat Incident Commander (IC)
Establish a staging area with security for relocated residents and business owners.	N/A	Consider posting law enforcement on site to ensure security of residents and business owners.
Emergency Pre-Hospital Care (RCG ESF-8 – Public Health and Medical Services)		
If a significant public health and/or medical response is anticipated, activate the MARC Health Care Coalition (HCC) Response Plan.	MARC HCC Response Plan: Concept of Operations and Activation	
Disseminate public information and health-related information	Local Public Health: RHMEPP: Appendix A – Stakeholder Contact Information List RAPIO: RCG ESF-15	
If requested, provide an EMS representative to the on scene Unified Command or a representative to the EOC	EMS Agencies: ESF#8 – MARCER Mass Casualty Incident (MCI) Plan	EMS Supervisor with decision making authority

Key Actions and Operations	Regional Resources	Considerations
Initiate medical surveillance of Hazmat personnel utilizing a personal exposure record	N/A	Example format: 1. Basic Medical 2. Chronological Exposure Record 3. Exposure Narrative Record 4. Chemical Exposure Record 5. Incident Notes 6. Incident Reference Schematic 7. Chemical Exposure Summary
Poison Control Center notification and coordination, as appropriate		Poison Control Center: 1-800-222-1222
Be aware of potential Biohazards and wear appropriate PPE	N/A	EMS, Hospitals & Poison Control Coordination Consideration should be given to confined space of a rescue unit or ambulance
Be aware of potential radiological hazards and utilize appropriate measures to protect staff (time-distance and shielding)	Radiological Emergency Assistance Center / Training Site	DOE Radiological Emergency Assistance Center / Training Site
Be aware of potential clandestine drug labs- patient contamination and or staff contamination	Poison Control	Fentanyl is a key example
Mass casualty incident, or MCI, results in patients that overwhelms the responding agency's resources	RCG ESF#8 – MARCER MCI Plan RCG ESF-8 - MCI Trailer	
Fatality Management	RCG ESF-8 - Mobile Morgue Equipment with 53-foot Refrigerated Trailer	Coordinate mortuary affairs with law enforcement for investigations
Hospitals (RCG ESF-8 – Public Health and Medical Services)		
Initiate information gathering from EMS units in route to the hospital with patients	EMResource (software) ESF#8 – MARCER MCI Plan Community Plan for Ambulance Diversion for the Greater Kansas City Metropolitan Area Kansas City Regional Patient Movement Plan	Example information: 1. Type of Incident 2. Type of decon already performed 3. Estimated time of arrival 4. Type of Chemical 5. Location within the community 6. Wind direction and speed 7. Number of patients 8. Signs and Symptoms 9. Quantity of chemical 10. Who is on scene
Identify the arrival of contaminated patients	Area Hospitals: ESF#8 – MARCER MCI Plan RCG ESF-#8 – Public Health and Medical (Gap: need to identify regional hospitals decon capabilities) Chemical Event Shipping Supply Location Program – Kansas	

Key Actions and Operations	Regional Resources	Considerations
Determine if triage support is required on scene	N/A	
Ensure patients are decontaminated prior to entry into the emergency department/room. Exterior triage may be required, as appropriate	Local hospital plans, policies, and procedures EMS decon protocols RCG, ESF-#8 – Public Health and Medical	In most cases, the decon solution of choice is water and a mild detergent (a pure type of soap is typically suggested to lessen the possibility of a reaction occurring with some chemical contaminants).
Poison Control Center notification and coordination, as appropriate	N/A	Poison Control Center: 1-800-222-1222
Be aware of potential Biohazards and wear appropriate PPE	N/A	
Be aware of potential radiological hazards and utilize appropriate measures (time-distance and shielding)	N/A	
Be aware of potential clandestine drug labs- patient contamination and or staff contamination	N/A	Fentanyl is a key example
Emergency Management (RCG ESF-5 – Information and Planning)		
Support on scene Incident Command Operations	RCG - Key Regional Emergency Management Contacts and MEMC	If the incident size/level warrants it, support on-scene operations
If incident is large enough, consider activating the EOC to an appropriate activation level to support on scene operations	RCG Key Regional Emergency Management Contacts RCG Base Plan Regional Coordination Levels: implement regional situational awareness and coordination based on established Regional Coordination Level	A partial activation may be appropriate to support long term planning, coordination, etc.
Supply Situational Awareness support to On Scene Incident Commander	RCG Key Regional Emergency Management Contacts Regional Incident Support Teams (IST)	Provide monitoring of Open-Source Intelligence feeds (social media, news media, etc.) to support the on-scene Incident Commander
Facilitate a Common Operational Picture if appropriate	RCG Key Regional Emergency Management Contacts RCG Base Plan Regional Coordination Levels: Implement regional situational awareness and coordination based on established Regional Coordination Level	

Key Actions and Operations	Regional Resources	Considerations
Initiate the ICS Information and Intelligence Section to support the On Scene Incident Commander	RCG Key Regional Emergency Management Contacts	Inclusive of current and future weather data, coordination with CHEMTREC, coordination with Hazmat vendors, notification, as required to OSHA, EPA, law enforcement (FBI, ATF, etc.)
Mass Care, Emergency Assistance, Temporary Housing and Human Services (RCG ESF-6 – Mass Care, Emergency Assistance, Temporary Housing and Human Services)		
Activate Family Assistance Center (FAC)	Human Services Appendices, Terrorism Annex, ESF-6 Annex	Establish FAC, as appropriate
Identify if on scene support is required or appropriate		Supporting relocation facilities
Provide clothing for evacuees on an emergent basis	American Red Cross, Greater Kansas City Chapter The Salvation Army KC Regional Community Organizations Active in Disaster (COAD) MARC Regional ESF-6: Donations Management Plan	
Provide Mental Health Services for evacuees and first responders as appropriate	MARC Regional ESF-6: Regional Mental Health Response System Plan	
Sheltering: Short- and Long-Term	American Red Cross, Greater Kansas City Chapter RCG ESF-6 – Regional Shelter Directory	
Provide Food and Water	The Salvation Army American Red Cross, Greater Kansas City Chapter KC Regional COAD Taking to the Streets Harvesters	
Care for those with Functional and Access Needs	ESF-6: Community Disaster Resiliency Network KC Regional COAD	
Public Information Officer/Joint Information System (JIS)/Joint Information Center (JIC) (RCG ESF-15 – Emergency Public Information)		
Disseminate public information and health-related information	Local Public Health: RHMEPP: Appendix A – Stakeholder Contact Information List RAPIO: RCG ESF-15	
Inform public of areas that are closed to the public	RAPIO: RCG ESF-15	Support on scene IC, if PIO is established PIO can take the lead for public information dissemination

Key Actions and Operations	Regional Resources	Considerations
Identify if the on-scene Commander requires a PIO or activation of the Joint Information System and a Joint Information Center	MARC Regional ESF-15: Emergency Public Information	Dependent of the size and complexity of the incident
Support on scene Incident Commander needs for dissemination public information	RAPIO: RCG ESF-15	
Inform the public of evacuation areas/zones, routes, and relocation facilities	RAPIO: RCG ESF-15	Coordinate with media partners to provide timely, accurate, and actionable information to the public.
Inform public of re-entry procedures	RAPIO: RCG ESF-15	Support on scene IC, if PIO is established PIO can take the lead for public information dissemination
Public Works & Utilities (RCG ESF-3 – Public Works and Engineering)		
Restoring public utilities		Assist in restoration of utilities after IC has declared the scene is safe and approved restoration of utilities.
Determine if a representative is appropriate to support the on-scene Incident Commander		Depending on the size, scope, and complexity PW may have a spot within Unified Command or within the Operations Section.
Clearing Debris		Support clearing debris but only after site is declared safe. This is typically contracted out to a Hazmat Vendor
Aviation Unit Assets to Support Local Operations		
Provide on-scene, aerial situational awareness		
If the incident is large enough or warrants it request the FAA to issue a Temporary Flight Restriction notice for the area.	Federal Aviation Administration (FAA)	Contact local FAA control tower to request TFR

Note: See Table 39 for agency contact information.

Appendix K: Acronyms List

Table 54: Acronyms

Acronym	Term
AADTT	Average annual daily truck traffic
AAR	Association of American Railroads
ARES	Amateur Radio Emergency Service
ATSDR	Agency for Toxic Substances and Disease Registry
BLEVE	Boiling liquid expanding vapor explosion
BTS	Bureau of Transportation Statistics
BNSF	Burlington Northern / Santa Fe Railway
CAA	Clean Air Act
CBIRF	Chemical Biological Incident Response Force
CBRNE	Chemical, biological, radiological, nuclear, or explosive
CDC	Centers for Disease Control and Prevention
CEPR	Kansas Commission on Emergency Planning and Response
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CFR	Code of Federal Regulations
CISA	Cybersecurity and Infrastructure Security Agency
CPG	Comprehensive Preparedness Guide
CPKC	Canadian Pacific Kansas City Limited Railway
CSR	Code of State Regulations
CST	Civil Support Team
DBA	Doing business as
decon	Decontamination
EAS	Emergency Alert Systems
EHS	Extremely hazardous substance
EMAC	Emergency Management Assistance Compact
EMS	Emergency Medical Services
EOC	Emergency operations center
EPA	U.S. Environmental Protection Agency
EPCRA	Emergency Planning and Community Right-to-Know Act of 1986
ERG	Emergency Response Guide
ERT	Environmental Response Team
ESF	Emergency Support Function
FAA	Federal Aviation Administration
FAR	Federal Aviation Administration Regulation

Acronym	Term
FBI	Federal Bureau of Investigation
FEMA	Federal Emergency Management Agency
FR	Federal Register
FRS	Facility Registry System
GHS	Globally Harmonized System of Classification and Labelling of Chemicals
GIS	Geographic Information System
Hazmat	Hazardous material
HAZWOPER	Hazardous Waste Operations and Emergency Response
HCC	Hospital Command Center
HERG	Healthcare Emergency Response Guide
HHS	U.S. Department of Health and Human Services
HICS	Hospital Incident Command System
HEPA	Hazmat Emergency Preparedness Alliance
HIFLD	Homeland Infrastructure Foundation-level Data
HMRT	Hazardous Materials Response Team
HMRU	Hazardous Materials Response Unit
HMTUSA	Hazardous Materials Transportation Uniform Safety Act
HRT	Health Response Team
HSPD	Homeland Security Presidential Directive
I	Interstate (highway)
IBC	Intermediate bulk container
ICP	Incident command post
ICS	Incident Command System
IDLH	Immediately dangerous to life and health
IM	Intermodal tank container
IP	Internet protocol
IPAWS	Integrated Public Alert and Warning System
ISD	Infrastructure Security Division
JIC	Joint Information Center
Jo Co	Johnson County
KAR	Kansas Administrative Regulations
KBI	Kansas Bureau of Investigation
KCC	Kansas Corporation Commission
KCMMRS	Kansas City Metropolitan Medical Response System
KCMO	City of Kansas City, Missouri
KCT	Kansas City Terminal Railway
KDEM	Kansas Division of Emergency Management

Acronym	Term
KDHE	Kansas Department of Health and Environment
KDOT	Kansas Department of Transportation
KEPCRA	Kansas Emergency Planning and Community Right-to-Know Act
KS	Kansas
KSA	Kansas Statutes Annotated
lb	Pounds
LEL	Lower Explosion Limit
LEOP	Local Emergency Operations Plan
LEPC	Local Emergency Planning Committee
LEPD	Local Emergency Planning District
LLC	Limited Liability Corporation
LPG	Liquified petroleum gas
M&NA	Missouri & Northern Arkansas Railroad
MARC	Mid-America Regional Council
MARCER	Mid-America Regional Council Emergency Rescue
MCI	Kansas City International Airport or Mass Casualty Incident
MoDNR	Missouri Department of Natural Resources
MEMC	Metropolitan Emergency Management Committee
MERC	Missouri Emergency Response Commission
MMRS	Metropolitan Medical Response System
MO	Missouri
MODOT	Missouri Department of Transportation
MoSCOPE	Missouri Systems Concept of Operational Planning for Emergencies
MOU	Memorandum of Understanding
NARR	Non-accident railroad release
NCERT	National Counter-terrorism Evidence Response Team
NCP	National Oil and Hazardous Substances Pollution Contingency Plan
N.E.C.	Not elsewhere classified
NFPA	National Fire Protection Association
NG	Natural gas
NGL	Natural gas liquid
NIMS	National Incident Management System
NOAA	National Oceanic and Atmospheric Administration
NPFC	National Pollution Funds Center
NRC	National Response Center
NRF	National Response Framework
NRP	National Response Plan
NS	Norfolk Southern Railway
NSF	National Strike Force

Acronym	Term
NTAD	National Transportation Atlas Database
OR&R	Office of Response and Restoration
OSC	On-Scene Coordinator
OSHA	Occupational Safety and Health Administration
OTR	Over-the-road
PDD	Presidential Defense Directive
PHMSA	Pipeline and Hazardous Materials Safety Administration
PPD	Presidential Policy Directive
PPE	Personal protective equipment
PRD	Product
PSAP	Public safety answering point
psig	Pounds per square inch gauge
RAPIO	Regional Association of Public Information Officers
RCG	Regional Coordination Guide
RCRA	Resource Conservation and Recovery Act
RERT	Radiological Emergency Response Team
RHCS	Regional Health Care Coordination System
RHMEPP	Regional Hazardous Materials Emergency Preparedness Plan
RHSCC	Regional Homeland Security Coordinating Committee
RMP	Risk management plan
ROW	Right-of-way
RQ	Reportable quantity
RR	Rapid Response Program
RRT	Regional Response Team
RSMO	Revised Statutes of Missouri
SARA	Superfund Amendment Reauthorization Act
SCBA	Self-Contained Breathing Apparatus
SDS	Safety Data Sheet
SEMA	State Emergency Management Agency
SERC	State Emergency Response Commission
SOG	Standard operating guide
SPCC	Spill Prevention, Control, and Countermeasures
SUPSALV	Supervisor of Salvage and Diving
TIH	Toxic inhalation hazard
TPQ	Threshold planning quantity
TRI	Toxics Release Inventory

Acronym	Term
UN/NA ID	United Nations / North America Identification
UP	Union Pacific Railroad
USACE	U.S. Army Corps of Engineers
USC	United States Code
USDOT	U.S. Department of Transportation
WMD	Weapon of mass destruction
